CERTIFICATE OF COMPLIANCE (ERM EVALUATION)

Manufacture: GS Instruments Co., Ltd.

1385-14, Juan-Dong, Nam-Ku, Incheon,,402-200 Korea

Date of Issue : May 20,2011

Test Report No.: HCTR1105FR11

Test Site: HCT CO., LTD.

FCC ID:

U88-SC-8930AMP

APPLICANT:

GS Instruments Co., Ltd.

EUT Type:

In-Building RF Repeater

Model:

GMS-8930AMP/DFU-SPR

Frequency Ranges:

Uplink: 806 MHz – 824 MHz (iDEN800-18 MHz)
817 MHz – 824 MHz (iDEN800-7 MHz)
896 MHz – 901 MHz (iDEN900-5 MHz)
Downlink: 851 MHz – 869 MHz (iDEN800-18 MHz)
862 MHz – 869 MHz (iDEN800-7 MHz)
935 MHz – 940 MHz (iDEN900-5 MHz)

RF Output Power:

Uplink: 27.0 dBm (iDEN800 / iDEN900)
Downlink: 27.0 dBm (iDEN800 / iDEN900)

FCC Rules Part(s):

CFR 47 Part 90

Engineering Statement:

The measurements shown in this report were made in accordance with the procedures indicated, and the emissions from this equipment were found to be within the limits applicable. I assume full responsibility for the accuracy and completeness of these measurements, and for the qualifications of all persons taking them. It is further stated that upon the basis of the measurements made, the equipment tested is capable of operation in accordance with the requirements of Part 90 of the FCC Rules under normal use and maintenance.

2. TEST SPECIFICATIONS

2.1 Standards

The following tests were conducted on a sample of the equipment for the purpose of demonstrating compliance With Part 90

Reference	Description	Results
§2.1046; §90.205	RF Power Output	Compliant
§2.1047	Modulation Characteristics	N/A
§2.1049	Occupied Bandwidth	Compliant
§2.1051; §90.210	Spurious Emissions at Antenna Terminals	Compliant
§2.1053; §90.210	Radiated Spurious Emissions	Compliant
§2.1055; §90.213	Frequency Stability	Compliant

3. STANDARDS ENVIRONMENTAL TEST CONDITIONS

Temperature :	+ 15 °C to + 35 °C
Relative humidity:	30 % to 60 %
Air pressure	860 mbar to 1 060 mbar

5. RF OUTPUT POWER

Test Requirements:

§ 2.1046 Measurements required: RF power output:

§ 2.1046 (a) For transmitters other than single sideband, independent sideband and controlled carrier radiotelephone, power output shall be measured at the RF output terminals when the transmitter is adjusted in accordance with the tune-up procedure to give the values of current and voltage on the circuit elements specified in § 2.1033(c)(8). The electrical characteristics of the radio frequency load attached to the output terminals when this test is made shall be stated.

§ 2.1046 (b) For single sideband, independent sideband, and single channel, controlled carrier radiotelephone transmitters, the procedure specified in paragraph (a) of this section shall be employed and, in addition, the transmitter shall be modulated during the test as specified and as applicable in § 2.1046 (b) (1-5). In all tests, the input level of the modulating signal shall be such as to develop rated peak envelope power or carrier power, as appropriate, for the transmitter.

§ 2.1046 (c) For measurements conducted pursuant to paragraphs (a) and (b) of this section, all calculations and methods used by the applicant for determining carrier power or peak envelope power, as appropriate, on the basis of measured power in the radio frequency load attached to the transmitter output terminals shall be shown. Under the test conditions specified, no components of the emission spectrum shall exceed the limits specified in the applicable rule parts as necessary for meeting occupied bandwidth or emission limitations.

§ 90.205 Power and antenna height limits. Refer to § 90.635

§ 90.635(b): The Effective radiated power (ERP) of base transmitters and cellular CDMA Inbuilding RF Repeaters must not exceed 500 watts.

Test Procedures:

As required by 47 CFR 2.1046, RF power output measurements were made at the RF output terminals using an attenuator and spectrum analyzer or power meter. This test was performed in all applicable modulations.

Block Diagram 1. RF Power Output Test Setup

Test Results:

The EUT complies with the requirements of this section. The EUT conducted power does not exceed limit at the carrier frequency.

Input Signal

	Modulation	Level (dBm)
iDEN	16QAM	-24.5

(Downlink)

6. OCCUPIED BANDWIDTH

Test Requirement(s): § 2.1049 Measurements required: Occupied bandwidth:

The occupied bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission shall be measured under the specified conditions of § 2.1049 (a) through (i) as applicable.

Test Procedures: As required by 47 CFR 2.1049, *occupied bandwidth measurements* were made with a Spectrum Analyzer connected to the RF ports for both Uplink and Downlink. The modulation characteristics of signal generator's carrier was measured first at a maximum RF level prescribed by the OEM. The signal generator was then connected to either the Uplink or Downlink input at the appropriate RF level. The resulting modulated signal through the EUT was measured and compared against the original signal.

Test Results: The EUT complies with the requirements of this section.

Input Signal

	Modulation	Level (dBm)
iDEN	16QAM	-30.5

(Downlink)

iDEN800 DownLink-18 MHz		
Carrier Channel	Frequency (MHz)	26dB Bandwidth(kHz)
