The above equipment was tested by A Test Lab Techno Corp. For compliance with the requirements set forth in 47 CFR \S 2.1091 / 47 CFR \S 1.1310. The results of testing in this report apply only to the product/system, which was tested. Other similar equipment will not necessarily produce the same results due to production tolerance and measurement uncertainties

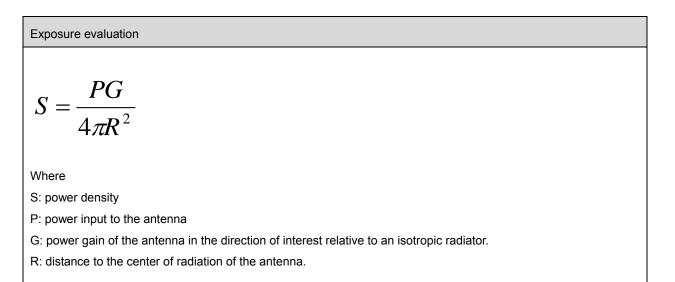

3. Human Exposure Assessment

Due to the design and installation of this product, it is not possible to conduct SAR evaluation. This is because client either manufactures or supplies the antenna(s) that will be used in the installation of this product. Therefore, this product will be evaluated as a mobile device per 47 CFR § 1.1310 titled "Radiofrequency radiation exposure limits", generally referred to as MPE limits.

In 47 CFR § 2.1091, paragraph (b) defines a mobile device as "a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 cm is normally maintained between the transmitter's radiating structure(s) and the body of the user or nearby persons. " This product is intended to be installed into a vehicle such that the unit is physically secured at one location. In the installation guide supplied with the product,

Client has made the following statement: "IMPORTANT: To meet the FCC's RF Exposure Guidelines, the antenna should be installed so there is at least 20 cm of separation between the body of the user and nearby persons and the antenna". Based on the installation of the transceiver and the antenna, the transmitters radiating structure is more than 20 cm from the user. Thus, this product is a "mobile device" as defined in section § 2.1091 paragraph (b).

4. RF Output Power

5. Test Results

Antenna	Band	Frequency (MHz)	Limit (mw)	Distance [R] (cm)	Tune-up Power (dBm) [P]	ANT Gain (dBi)	Numeric Gain [G]	Duty Cycle	Power with Duty cycle [TP] (mW)	Power Density [S] (mw/cm ²)
Wi-Fi Antenna	2.4 GHz	2412-2462	1	20	22.81	5.07	3.21	1	613.14	0.122
		5180-5240	1	20	24.08	5.68	3.70	1	947.38	0.188
	5 GHz	5745-5825	1	20	24.04	5.67	3.69	1	934.41	0.186

Note:

- Mobile or fixed location transmitters, minimum separation distance is 20 cm, even if calculations indicate MPE distance is less.
- 2. We used the maximum power and gain to provide MPE results.
- 3. The Numeric Gain calculated by 10[^](ant. Gain(dBi) /10).
- 4. The MPE results are evaluated by lowest data rate for WLAN.
- 5. The device operating IEEE 802.11 a/b/g mode is 2TX CDD.
- 6. The device operating IEEE 802.11 ac/n mode is 2TX MIMO.

Simultaneous Transmitting:

Total MPE = 2.4 GHz MPE+5 GHz MPE = $0.122 + 0.188 = 0.310 \text{ mw/cm}^2 < 1 \text{ mw/cm}^2$
