

Operational Description

This device can be showed video to used internal HDD or Network resource. This device support wired and wireless network which use Ethernet interface and 54Mbps Wireless Mini PCI(IEEE 802.11 b/g, 64/128bit WEB security). This device has Wired and Wireless LAN module which supports turbo function, WEP security function with high sensitive 5dBi antenna. You can connect LX351HD/SATA easily with any wireless network environment.

This device can output analog audio signal (decoded signal), as it can decode digital signal (high quality audio sound signal like AC3, DTS) into analog signal internally by itself. So, you can enjoy 5.1CH high quality sound without an expansive additional device like DTS decoder or Receiver. And, as this device supports 2CH down mix, users who has 2CH speaker can also enjoy multi channel audio track.

This device supports various latest formats such as a pre-recorded HD files(TP ,ts), wmv9, wmvHD, MPEG1/2, MPG, MPEG4(DivX, Xvid), etc.

Without the procedure to copy files from PC to device's HDD through USB cable, you can stream various media files from your PC to device's HDD to playback on TV directly through device's network.

The device has two(2) USB2.0 HOST, you can connect various external USB devices such as external HDD, USB memory, digital camera & etc.
