Overview

The Tag is a wireless device that is located so as to provide environmental information such as the temperature of a refrigeration unit or the humidity of a space. The Tag transmits short messages periodically that include the ID of the device as well as environmental sample data which are received by the Awarepoint sensors. The sensors relay the ID and sample data messages to the bridges via the mesh network created by the plurality of sensors. The bridge communicates with the tags on its wireless link via the sensors. The bridges communicate with the Awarepoint server over an ethernet Interface.
