**Overview**

The Awarepoint real time location system is comprised of ID tags, sensors and bridges forming a radio network. The T3X tag is a wireless device, operating under FCC rule part 15.247, which is attached to devices to enable identification and location of the devices. The T3X may also be used for wireless software updates. The device also contains a low frequency inductive transceiver used for external initiation of communications. The 15.209 transmitter has been verified per 15.201(a). The tags are battery powered closed devices which are not field serviceable.
