

28 November 2006

To whom it may concern:

We the undersigned, seek FCC approval of a Class II Permissive Change for our 4 port EPC Class 1 Gen2 UHF RFID Fixed Reader, model number CS-461. The primary reason for the Class II change is the replacement of a component in order to obtain a RoHS (lead-free) PCB assembly. The original component will not be available in a RoHS version. The nature of this change necessitates the need for RF testing to verify that the reader remains compliant.

Additional changes were made to support enhanced software functionality and future reuse of the PCB for other regions. All design changes are summarized in the word document entitled *CS461 change Description..*

FCC certification number: UB4CS461C1GEN2

Sincerely,

A handwritten signature in black ink, appearing to be 'Al' followed by a flourish.
