RE: SDT Information Technology

FCC ID: UFHV11

I have a few comments on this Application. Depending on your responses, kindly understand there may be additional comments.

- 1.) The Label for this device indicates that DofC applies to this product. Please note that DofC testing for Part 15B is not permitted in China. In what country was Part 15B testing performed?
- 2.) I am unsure as to why the 8GHz wide spans on pages 69-74 are presented. Why are not spans from 2483.5MHz to 26GHz presented?
- 3.) Please refer to the RF Pout in section 5.6 of the Test Report. Please provide mid-channel readings of RF power for all data rates from lowest to highest power.
- 4.) Please see section 7.6 of the Test Report. There is no vertical graticule shown on these plots. Therefore I am unable to associate any of the markers presented with their corresponding frequency in determining compliance. Please correct. I am especially concerned with all radiated band edge measurements taken on Channel 11.
- 5.) Please observe your Test Setup photographs. ANSI C63.4 does not permit condone the use of strip outlets on the tabletop during testing. Please correct.
- 6.) Please add the 15.19(a)(3) and 15.21 statements to the Manual. In addition, please be sure that any appropriate RF Exposure information is also presented.

William H. Graff
President

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
