

## **VRBCS335 Transmitter Circuit description**

The power supply of whole circuit is provided by Car,then through transformer, filter and rectifier,become different steady voltage and supply transmitter module,sensor MI360 module,and VC0802 Video signal Processor module.

Signal is gathered by sensor MI360 through color lens and processed by VC0702 Video signal processor ,then sending out by 2.4G Wireless transmitter

Night view function is controned by VC0702 Video signal processor.
