Reply for this comments on the Application.

1. Please revise test report and include Magnetron manufacturer and model number. This information must be on the grant.

Answer : I have added this information to the report ,please kindly see the page 2 of the revised report .

2. Does the EUT have 900 Watts output power or 1000W output power? This has to be listed on the grant also. Please correct test report to state output power. If one of the models has 1000W then that model should be the one tested. It would be considered the worst case because it has the highest output power. Please confirm output power in the revised test report.

Answer : The EUT have 900 Watts output power ,and the other models is the sample ,I have added this information to the report , please kindly see the page 2 of the revised report .

Thank you,

Ivan Wen
