

# **RF Exposure Evaluation Declaration**

	UIDIM6
Applicant:	ARRIS
Product:	Wireless Router
Model No.:	M6
FCC Classification:	15E 6 GHz Low Power Indoor Access Point (6ID)
	15E 6 GHz Subordinate Indoor Device (6PP)
FCC Rule Part(s)	FCC Part 2.1091
Test Procedure	KDB 447498 D04 Interim General RF Exposure
	Guidance v01

**Reviewed By:** 

Vincent Yu

Approved By:

Robin Wu

The test results relate only to the samples tested.

The test results shown in the test report are traceable to the national/international standards through the calibration of the equipment and evaluated measurement uncertainty herein.

The test report shall not be reproduced except in full without the written approval of MRT Technology (Suzhou) Co., Ltd.

## 1. General Information

### 1.1. Applicant

ARRIS

3871 LAKEFIELD DR, SUWANEE GA 30024, UNITED STATES

#### 1.2. Manufacturer

ARRIS

3871 LAKEFIELD DR, SUWANEE GA 30024, UNITED STATES

## 1.3. Testing Facility

	Test Site – MRT Suzhou Laboratory								
	Laboratory Location (Suzhou - Wuzhong)								
	D8 Building, No.2 Tian'edang Rd., Wuzhong Economic Development Zone, Suzhou, China								
	Laboratory Location (Suzhou - SIP)								
	4b Building, Liando U Valley, No.200 Xingpu Rd., Shengpu Town, Suzhou Industrial Park, China Laboratory Accreditations								
	A2LA: 3628.01		CNAS	S: L10551					
	FCC: CN1166		ISED	CN0001					
		<b>R-20025</b>	□G-20034	C-20020	T-20020				
	VCCI	<b>R</b> -20141	□G-20134	C-20103	T-20104				
	Test Site – MRT Shenzhen Laboratory								
	Laboratory Location (Shenzhen)								
	1G, Building A, Junxiangda Building, Zhongshanyuan Road West, Nanshan District, Shenzhen, China								
	Laboratory Accreditations								
	A2LA: 3628.02		CNAS	: L10551					
	FCC: CN1284		ISED:	CN0105					
	Test Site – MRT Taiwan Laboratory								
	Laboratory Loca	ition (Taiwan)							
	No. 38, Fuxing 2nd Rd., Guishan Dist., Taoyuan City 333, Taiwan (R.O.C.)								
	Laboratory Accr	editations							
	TAF: L3261-1907	25							
	FCC: 291082, TW3261 ISED: TW3261								

#### 1.4. Product Information

Product Name	Wireless Router			
Model No.	M6			
	26V431111190039 (CBP)			
Serial No.	26V431111190006 (RF Conducted)			
	26V431111190029 (RF Radiated)			
Wi-Fi Specification	802.11a/ax			
Antenna Information	Refer to section 1.7			
Power Supply	AC/DC Adapter			
Operating Temperature	0 ~ 40 °C			
Operating Environment	Indoor Use			
Accessories				
AC/DC Adapter 1#	Model: F24L15-120200SPAU			
Input: 100-120V~60Hz, 0.7A Max				
	Output: 12.0V, 2.0A			
AC/DC Adapter 2#	Model: WB-24M12FU			
	Input: 100-120V~60Hz, 0.7A Max			
	Output: 12.0V, 2.0A			
Remark: The information of EUT was provided by the manufacturer, and the accuracy of the information shall				
be the responsibility of the manufacturer.				

#### 1.5. Antenna Details

Antenna	Frequency	Nant	Antenna Gain (dBi)			Max. GANT	CDD D	G (dBi)	
Туре	Range (MHz)		Ant 0	Ant 1	Ant 2	Ant 3	(dBi)	Power	PSD
PCB Antenna	5955 ~ 7095	4	4.6	4.5	4.5	4.6	4.6	4.6	10.62

Remark:

1. The EUT supports Cyclic Delay Diversity (CDD) mode, and CDD signals are correlated.

For CDD transmissions, directional gain is calculated as follows,  $N_{ANT} = 4$ ,  $N_{SS} = 1$ .

If all antennas have the same gain,  $G_{ANT}$ , Directional gain =  $G_{ANT}$  + Array Gain, where Array Gain is as follows.

For power spectral density (PSD) measurements on all devices,

Array Gain =  $10*\log(N_{ANT}/N_{SS}) dB = 6.01;$ 

- For power measurements on IEEE 802.11 devices, Array Gain = 0 dB for N<sub>ANT</sub> ≤ 4;
- The EUT also supports Beam Forming mode, and the Beam Forming support 802.11ax, not include 802.11a. For beamforming operation, manufacturer automatically backs power down based on a 10log (NANT) factor based on CDD power. Therefore, only the CDD mode was evaluated in this report.

#### 1.6. Device Classification

According to the user manual, the antenna of this device is at least 20cm away from the body of the user, this device is classified as a **Mobile Device**. Therefore, the RF exposure evaluation requirements of FCC Part 2.1091 for mobile device exposure conditions subject to MPE limits.

# 2. **RF Exposure Evaluation**

#### 2.1. Test Limits

According to FCC Part 2.1091, A mobile device is defined as a transmitting device designed to be used in other than fixed locations and to generally be used in such a way that a separation distance of at least 20 cm is normally maintained between the RF source's radiating structure(s) and the body of the user or nearby persons.

According to FCC Part 1.1307(b)(3)(i)(C), for the exemption in Table 1 to apply, R must be at least  $\lambda/2\pi$ , where  $\lambda$  is the free-space operating wavelength in meters. If the ERP of a single RF source is not easily obtained, then the available maximum time-averaged power may be used in lieu of ERP if the physical dimensions of the radiating structure(s) do not exceed the electrical length of  $\lambda/4$  or if the antenna gain is less than that of a half-wave dipole.

	-			
RF Source Frequency (MHz)	Threshold ERP (watts)			
0.3-1.34	1.920 R <sup>2</sup>			
1.34-30	3.450 R <sup>2</sup> /f <sup>2</sup>			
30-300	3.83 R <sup>2</sup>			
300-1500 0.0128 R <sup>2</sup> f				
1500-100,000	19.2 R <sup>2</sup>			
f = frequency in MHz. R = minimum separation distance in meters.				

Table 1 to § 1.1307(b)(3)(i)(C) - Single RF Sources Subject to Routine Environmental Evaluation

According to FCC Part 1.1307(b)(3)(ii)(B), in the case of fixed RF sources operating in the same time-averaging period, or of multiple mobile or portable RF sources within a device operating in the same time averaging period, if the sum of the fractional contributions to the applicable thresholds is less than or equal to 1 as indicated in the following equation.

$$\sum_{i=1}^{a} \frac{P_i}{P_{\text{th},i}} + \sum_{j=1}^{b} \frac{ERP_j}{ERP_{\text{th},j}} + \sum_{k=1}^{c} \frac{Evaluated_k}{Exposure\ Limit_k} \le 1$$

#### 2.2. Test Result

Product	Wireless Router
Test Item	RF Exposure Evaluation

Test Mode	Frequency Band Max. E		ERP	Compliance Distance (R)	Threshold ERP
	(MHz)	(dBm)	(W)	(m)	(VV)
802.11ax	5955 ~ 7095	22.987	0.121	0.2	0.768

Note:

1. ERP (W) =  $10^{[ERP (dBm) - 30]/10} = 10^{[EIRP (dBm) - 2.15 (dB) - 30]/10}$ 

2. Threshold ERP (W) =  $19.2 \times R^2$  (W) =  $19.2 \times 0.2^2$  (W) = 0.768 (W)

Therefore, this device meets the RF Exposure requirements when it is installed and operated with a minimum distance of 20cm between the radiator and user.

The End
