

RF Exposure Report Report No.: SABAOZ-WTW-P20070419 FCC ID: UIDWC4T Test Model: WC4T Received Date: July 22, 2020 Test Date: Aug. 21, 2020 Issued Date: Sep. 22, 2020 Applicant: ARRIS Address: 3871 LAKEFIELD DRIVE SUWANEE GA 30024-1292 UNITED STATES Issued By: Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch Hsin Chu Laboratory Lab Address: E-2, No.1, Li Hsin 1st Road, Hsinchu Science Park, Hsinchu City 300, Taiwan Test Location: E-2, No.1, Li Hsin 1st Road, Hsinchu Science Park, Hsinchu City 300, Taiwan FCC Registration / 723255 / TW2022 **Designation Number:**

This report is for your exclusive use. Any copying or replication of this report to or for any other person or entity, or use of our name or trademark, is permitted only with our prior written permission. This report sets forth our findings solely with respect to the test samples identified herein. The results set forth in this report are not indicative or representative of the quality or characteristics of the lot from which a test sample was taken or any similar or identical product unless specifically and expressly noted. Our report includes all of the tests requested by you and the results thereof based upon the information that you provided to us. You have 60 days from date of issuance of this report to notify us of any material error or omission caused by our negligence, provided, however, that such notice shall be in writing and shall specifically address the issue you wish to raise. A failure to raise such issue within the prescribed time shall constitute your unqualified acceptance of the completeness of this report, the tests conducted and the correctness of the report contents. Unless specification, the uncertainty of measurement has been explicitly taken into account to declare the compliance or non-compliance to the specification.

Release Control Record

Issue No.	Description	Date Issued	
SABAOZ-WTW- P20070419	Original release.	Sep. 22, 2020	

1 Certificate of Conformity Product: SURFboard Wi-Fi Router Brand: ARRIS Test Model: WC4T Sample Status: Engineering Sample Applicant: ARRIS Test Date: Aug. 21, 2020 Standards: FCC Part 2 (Section 2.1091) IEEE C95.3-2002 Eeferences Test KDB 447498 D01 General RF Exposure Guidance v06

The above equipment has been tested by **Bureau Veritas Consumer Products Services (H.K.) Ltd., Taoyuan Branch**, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's EMC characteristics under the conditions specified in this report.

2 RF Exposure

2.1 Limits for Maximum Permissible Exposure (MPE)

Frequency Range (MHz)	Electric Field Strength (V/m)	Magnetic Field Strength (A/m)	Power Density (mW/cm ²)	Average Time (minutes)		
Limits For General Population / Uncontrolled Exposure						
0.3-1.34	614	1.63	(100)*	30		
1.34-30	824/f	2.19/f	(180/f²)*	30		
30-300	27.5	0.073	0.2	30		
300-1500			f/1500	30		
1500-100,000			1.0	30		

f = Frequency in MHz ; *Plane-wave equivalent power density

2.2 MPE Calculation Formula

 $Pd = (Pout^{*}G) / (4^{*}pi^{*}r^{2})$

where

 $Pd = power density in mW/cm^2$

Pout = output power to antenna in mW

G = gain of antenna in linear scale

Pi = 3.1416

R = distance between observation point and center of the radiator in cm

2.3 Classification

The antenna of this product, under normal use condition, is at least 33 cm away from the body of the user. So, this device is classified as **Mobile Device**.

2.4 Antenna Gain

Frequency Range (GHz)	4TX Directional Antenna Gain (dBi) (Worst configuration)	3TX Directional Antenna Gain (dB (Worst configuration)	
2.4~2.4835	7.37 (Antenna 5 / 6 / 7 / 8)	-	
5.15 ~ 5.25	-	6.87 (Antenna 5 / 6 / 8)	
5.25 ~ 5.35	-	6.94 (Antenna 5 / 7 / 8)	
5.47 ~ 5.725	7.93 (Antenna 1 / 2 / 3 / 4)	-	
5.725 ~ 5.85	7.92 (Antenna 1 / 2 / 3 / 4)	-	

Note:

The directional gain is being calculated by individual antenna gains and per KDB 662911 formula.

Directional gain = $10 \log[(10^{G_I/20} + 10^{G_2/20} + ... + 10^{G_N/20})^2 / N_{ANT}] dBi$

More detailed information, please refer to Operation Description exhibit.

*The above Antenna information is declared by manufacturer and for more detailed features description, please refer to the manufacturer's specifications, the laboratory shall not be held responsible.

2.5 **Calculation Result**

Operation Mode	Evaluation Frequency (MHz)	Max Average Power (mW)	Antenna Gain (dBi)	Distance (cm)	Power Density (mW/cm ²)	Limit (mW/cm ²)
WLAN 2.4GHz	2412~2462	613.378	7.37	33	0.24462	1
WLAN 5GHz (U-NII-1)	5180~5250	488.826	6.87	33	0.17375	1
WLAN 5GHz (U-NII-3)	5745~5825	989.696	7.92	33	0.44799	1

Note:

1. Determining compliance based on the results of the compliance measurement, not taking into account measurement instrumentation uncertainty. 2.4GHz: 10 log[$(10^{G0/20} + 10^{G1/20} + 10^{G2/20} + 10^{G3/20})^2 / 4$] = 7.37dBi

5GHz: For U-NII-1: 10 log[$(10^{G0/20} + 10^{G1/20} + 10^{G2/20})^2 / 3$] = 6.87dBi For U-NII-3: 10 log[$(10^{G0/20} + 10^{G1/20} + 10^{G2/20} + 10^{G3/20})^2 / 4$] = 7.92dBi

Conclusion:

The formula of calculated the MPE is:

CPD1 / LPD1 + CPD2 / LPD2 +etc. < 1

CPD = Calculation power density

LPD = Limit of power density

WLAN 2.4GHz + WLAN 5GHz (U-NII-1) + WLAN 5GHz (U-NII-3) = 0.24462 / 1 + 0.17375 / 1 + 0.44799 / 1 = 0.86636

Therefore the maximum calculations of above situations are less than the "1" limit.
