

Extended Frequency Attestation

Date: 26 April 2013

Federal Communications Commission (FCC)

To Whom It May Concern:

We (4RF Limited) would like to request for the frequency to be extended in the grant. The frequency of operation covered under FCC part 101 is 2180-2200 MHz. The extended frequency requested is 2200-2290 MHz and is for Federal use only.

The operation of the product in the extended frequency is naturally limited by the market themselves. Our products predominantly operate within frequency bands that require a site license be issued by the radio regulatory authority with jurisdiction over the territory in which the equipment is being operated.

Normally it is the customers (Federal users such as Federal Police etc.) who has or can apply for a license in the extended frequencies who would purchase the equipment. The customer specifies the exact frequency (in the extended frequency range) in the purchase order and the equipment is factory tuned using specialized test gear to the specified frequency. The frequency of operation is not user adjustable.
