

Company: SALTO Systems

Test of: AElement Wireless Lock

To: FCC Part 15.225 & IC RSS 210  
+ NFC and Bluetooth Colocation Emissions

Report No.: APPU08-U2 Rev A

## TEST REPORT

Test of: SALTO Systems AElement Wireless Lock

to

FCC Part 15.225 & IC RSS 210

Test Report Serial No.: APPU08-U2 Rev A

This report supersedes: None

Applicant: SALTO Systems  
C/Arkotz nº9 Pol.  
Lanbarren  
Arkotz Kalea  
Oiartzun 20180 Spain

Product Function: Wireless Lock

Issue Date: 7<sup>th</sup> June 2017

**This Test Report is Issued Under the Authority of:**

**MiCOM Labs, Inc.**

## 1. ACCREDITATION, LISTINGS & RECOGNITION

### 1.1. Test Accreditation

MiCOM Labs, Inc. is an accredited Electrical testing laboratory per the international standard ISO/IEC 17025:2005. The company is accredited by the American Association for Laboratory Accreditation (A2LA) [www.a2la.org](http://www.a2la.org) test laboratory number 2381.01. MiCOM Labs test schedule is available at the following URL; <http://www.a2la.org/scopepdf/2381-01.pdf>

This test report may be reproduced in full only. The document may only be updated by MiCOM Labs personnel. All changes will be noted in the Document History section of the report.

**Title:** SALTO Systems AElement  
**To:** FCC Part 15 15.225 & IC RSS-210  
**Serial #:** APPU08-U2 Rev A  
**Issue Date:** 7<sup>th</sup> June 2017  
**Page:** 5 of 49

## 1.2. Recognition

MiCOM Labs, Inc has widely recognized wireless testing capabilities. Our international recognition includes Conformity Assessment Body designation by APEC MRA countries. MiCOM Labs test reports are accepted globally.

Country	Recognition Body	Status	Phase	Identification No.
USA	Federal Communications Commission (FCC)	TCB	-	US0159 Listing #: 102167
Canada	Industry Canada (IC)	FCB	APEC MRA 2	US0159 Listing #: 4143A-2 4143A-3
Japan	MIC (Ministry of Internal Affairs and Communication)	CAB	APEC MRA 2	RCB 210
	VCCI	--	--	A-0012
Europe	European Commission	NB	EU MRA	NB 2280
Australia	Australian Communications and Media Authority (ACMA)	CAB	APEC MRA 1	US0159
Hong Kong	Office of the Telecommunication Authority (OFTA)	CAB	APEC MRA 1	
Korea	Ministry of Information and Communication Radio Research Laboratory (RRL)	CAB	APEC MRA 1	
Singapore	Infocomm Development Authority (IDA)	CAB	APEC MRA 1	
Taiwan	National Communications Commission (NCC) Bureau of Standards, Metrology and Inspection (BSMI)	CAB	APEC MRA 1	
Vietnam	Ministry of Communication (MIC)	CAB	APEC MRA 1	

EU MRA – European Union Mutual Recognition Agreement.

NB – Notified Body

APEC MRA – Asia Pacific Economic Community Mutual Recognition Agreement. Recognition agreement under which test lab is accredited to regulatory standards of the APEC member countries.

Phase I - recognition for product testing

Phase II – recognition for both product testing and certification

This test report may be reproduced in full only. The document may only be updated by MiCOM Labs personnel. All changes will be noted in the Document History section of the report.

### 1.3. Product Certification

MiCOM Labs, Inc. is an accredited Product Certification Body per the international standard ISO/IEC 17065:2012. The company is accredited by the American Association for Laboratory Accreditation (A2LA) [www.a2la.org](http://www.a2la.org) test laboratory number 2381.02. MiCOM Labs test schedule is available at the following URL; <http://www.a2la.org/scopepdf/2381-02.pdf>

United States of America – Telecommunication Certification Body (TCB)

Industry Canada – Certification Body, CAB Identifier – US0159

Europe – Notified Body (NB), NB Identifier - 2280

Japan – Recognized Certification Body (RCB), RCB Identifier - 210

This test report may be reproduced in full only. The document may only be updated by MiCOM Labs personnel. All changes will be noted in the Document History section of the report.

STANDARD(S)	TEST RESULTS
FCC CFR 47 Part 15 Subpart C 15.225 Industry Canada RSS-210	EQUIPMENT COMPLIES

MiCOM Labs, Inc. tested the equipment mentioned in accordance with the requirements set forth in the above standards. Test results indicate that the equipment tested is capable of demonstrating compliance with the requirements as documented within this report.

#### Notes:

1. This document reports conditions under which testing was conducted and the results of testing performed.
2. Details of test methods used have been recorded and kept on file by the laboratory.
3. Test results apply only to the item(s) tested.

**Approved & Released for MiCOM Labs, Inc. by:**

  
\_\_\_\_\_  
Graeme Grieve  
Quality Manager MiCOM Labs, Inc.

  
\_\_\_\_\_  
Gordon Hurst  
President & CEO MiCOM Labs, Inc.

This test report may be reproduced in full only. The document may only be updated by MiCOM Labs personnel. All changes will be noted in the Document History section of the report.

## **4.2. Test and Uncertainty Procedure**

Conducted and radiated emission measurements were conducted in accordance with American National Standards Institute ANSI C63.4, listed in the Normative References section of this report.

Measurement uncertainty figures are calculated in accordance with ETSI TR 100 028 Parts 1 and 2.

Measurement uncertainties stated are based on a standard uncertainty multiplied by a coverage factor  $k = 2$ , providing a level of confidence of approximately 95 % in accordance with UKAS document M 3003 listed in the Normative References section of this report.

## 5. PRODUCT DETAILS AND TEST CONFIGURATIONS

### 5.1. Technical Details

Details	Description
Purpose:	Test of SALTO Systems AElement for compliance to FCC CFR 47 Part 15 Subpart C 15.225 and IC RSS-210.
Applicant:	SALTO Systems C/Arkotz nº9 Pol. Lanbarren Arkotz Kalea Oiartzun 20180 Spain
Manufacturer:	As Applicant
Laboratory performing the tests:	MiCOM Labs, Inc. 575 Boulder Court, Pleasanton, California 94566 USA
Test report reference number:	APPU08-U2 Draft
Date EUT received:	15 <sup>th</sup> May 2017 5 <sup>th</sup> January 2017
Standard(s) applied:	FCC CFR 47 Part 15 Subpart C 15.225 Industry Canada RSS-210
Dates of test (from - to):	19 <sup>th</sup> May 2017 17 <sup>th</sup> – 18 <sup>th</sup> January 2017
No of Units Tested:	1
Type of Equipment:	13.56 MHz
Product Trade Name:	AElement
Model(s):	AES see Section 5.2 Scope of Test Program for description
Location for use:	Indoor
Declared Frequency Range(s):	13.553-13.567 MHz
Hardware Rev	1.0
Software Rev	Test Software
EUT Modes of Operation:	NFC & Bluetooth
Type of Modulation:	NFC: ASK Bluetooth: GFSK
Declared Nominal Output Power (Ave):	+8 dBm
Transmit/Receive Operation:	Transceiver - Simplex
System Beam Forming:	This device has no beam-forming capability
Rated Input Voltage and Current:	4.5 Vdc nominal (battery powered)
Operating Temperature Range:	Client Declared Range -20°C to 60°C
ITU Emission Designator:	33K3K1D
Equipment Dimensions:	65" x 116" x 25.5"
Weight:	2kg
Primary function of equipment:	Wireless Lock
Secondary function of equipment:	None provided

This test report may be reproduced in full only. The document may only be updated by MiCOM Labs personnel. All changes will be noted in the Document History section of the report.

**Page:** 12 of 49

## **5.2. Scope Of Test Program**

### **SALTO Systems AEelement Wireless Lock**

The scope of the test program was to test the SALTO Systems AEelement Wireless Lock NFC radio model AES operating at 13.56 MHz for compliance to the requirements of FCC CFR 47 Part 15 Subpart C 15.225 & IC RSS-210 issue 9 specifications.

This program builds on the initial test program performed 9th February for the AEB model, see report APPU01-U3 Rev A. A full suite of tests were included in the initial report.

For the new AES model only colocation and digital emissions were performed. All the original conducted test data has been included in this report for similarity purposes.

AES FCC ID: UKCAEB  
AES IC ID: 10088A-AEB

Product labeling on the NFC + BLE variant will be as follows;

Variant	Model Number	USA (FCC ID)	Canada (IC ID)
NFC + BLE	AES	UKCAEB	10088A-AEB

### **Pre-Certified BLE Module**

The pre-certified BLE module used in the AES Wireless Lock, is the "DirectKey" module

FCC ID: TCZ-10103751G1  
IC ID: 1175F-10103751G1.

### **Model Description**

AEelement BLE Mifare/iClass with Bluetooth technology Electronic Lock Series including all mechanical variants. See Technical File for more details.

### **Co-Location Testing**

In order to satisfy test requirements for multiple transmitters co-location testing was performed NFC + BLE simultaneous transmission requirements, see Section 8.2.1 for 0.03 – 1 GHz and 1 – 18 GHz radiated spurious emission data. Both transmitters were active during these tests.

### 5.3. Equipment Model(s) and Serial Number(s)

Model / Description	Serial no.	Hardware version	Software version
AES	4367/3	1.0	Test Software

### 5.4. Antenna Details

Type	Manufacturer	Model	Gain (dBi)	Frequency Band (MHz)
PCB	SALTO Systems	NFC @13.56MHz	0	13.56

### 5.5. Cabling and I/O Ports

Number and type of I/O ports

1. None

### 5.6. Test Configurations

Operational Mode(s)	Channel Frequency (MHz)
NFC and Bluetooth	13.56 MHz and 2.4 GHz Frequency Hopping

Results for the above configuration are provided in this report

### 5.7. Equipment Modifications

The following modifications were required to bring the equipment into compliance:

1. None

### 5.8. Deviations from the Test Standard

The following deviations from the test standard were required in order to complete the test program:

1. None

This test report may be reproduced in full only. The document may only be updated by MiCOM Labs personnel. All changes will be noted in the Document History section of the report.

## 6. TEST SUMMARY

### List of Measurements

Test Header	Result
Conducted Testing	
15.225(e) Frequency Stability <sup>1</sup>	Complies
Radiated Testing	
15.205, 15.209 & 15.225 (a) (d) Radiated Spurious Emissions (including Colocation Testing)	Complies
15.225(a) Field Strength Measurement <sup>1</sup>	Complies
15.215, RSS-Gen 20 dB and 99% Bandwidth <sup>1</sup>	Complies
15.207 Conducted Limits (AC)	Not Required*
15.203 Antenna Requirement <sup>1</sup>	Complies

<sup>1</sup> parameter tested as part of the initial AEB test program (see test report APPU01-U3)

\*EUT is battery powered with no connection to public mains network.

This test report may be reproduced in full only. The document may only be updated by MiCOM Labs personnel. All changes will be noted in the Document History section of the report.

## 7. TEST EQUIPMENT CONFIGURATION(S)

### 7.1. Radiated Emissions

Radiated emissions testing above and below 1GHz was performed using the following test setup.

This test report may be reproduced in full only. The document may only be updated by MiCOM Labs personnel. All changes will be noted in the Document History section of the report.

**Title:** SALTO Systems AEelement

## **8. TEST RESULTS**

### **8.1. Frequency Stability**

**FCC, Part 15 Subpart C §15.225(e)**  
**Industry Canada RSS-210**

#### **Test Procedure**

The frequency tolerance of the carrier signal shall be maintained within  $\pm 0.01\%$  of the operating frequency over a temperature variation of  $-20$  degrees to  $+ 50$  degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. For battery operated equipment, the equipment tests shall be performed using a new battery.

Frequency Stability testing was performed using an environmental chamber to test EUT performance over temperature.

## 8.2. Field Strength and Spurious Emissions

### 8.2.1. Radiated Emissions + Colocation

Radiated Test Conditions for Radiated Emissions (0.03 – 1 GHz)			
<b>Standard:</b>	FCC CFR 47:15.209, 15.225	<b>Ambient Temp. (°C):</b>	20.0 - 24.5
<b>Test Heading:</b>	Radiated Emissions	<b>Rel. Humidity (%):</b>	32 - 45
<b>Standard Section(s):</b>	15.209, 15.225/ANSI C63-10-2013, & IC-RSS 210	<b>Pressure (mBars):</b>	999 - 1001
<b>Reference Document(s):</b>	See Normative References		

#### Test Procedure for Radiated Digital Emissions (9 – 150 KHz)

Testing 9KHz-150 KHz was performed in a 3-meter anechoic chamber using a CISPR compliant receiver. Preliminary radiated emissions were measured on every azimuth and with the receiving antenna in both horizontal and vertical polarizations. To further maximize emissions the receive antenna was varied from 0 degrees and 90 degrees. The emissions are recorded with receiver in peak hold mode. Only the highest emissions relative to the limit are listed.

Using ANSI C63-10-2013 section 6.10.5.2 Test methodology

i) Below 150 kHz: 300 Hz or CISPR 200 Hz

#### Test Procedure for Radiated Digital Emissions (150 KHz – 30 MHz)

Testing 150KHz-30MHz was performed in a 3-meter anechoic chamber using a CISPR compliant receiver. Preliminary radiated emissions were measured on every azimuth and with the receiving antenna in both horizontal and vertical polarizations. To further maximize emissions the receive antenna was varied from 0 degrees and 90 degrees. The emissions are recorded with receiver in peak hold mode. Only the highest emissions relative to the limit are listed.

Using ANSI C63-10-2013 section 6.10.5.2 Test methodology

il) 150 kHz to 30 MHz: 10 kHz or CISPR 9 kHz

#### Test Procedure for Radiated Digital Emissions (0.03 – 1 GHz)

Testing 30MHz-1 GHz was performed in a 3-meter anechoic chamber using a CISPR compliant receiver. Preliminary radiated emissions were measured on every azimuth and with the receiving antenna in both horizontal and vertical polarizations. To further maximize emissions the receive antenna was varied between 1 and 4 meters. The emissions are recorded with receiver in peak hold mode. Only the highest emissions relative to the limit are listed.

Test configuration and setup for Radiated Spurious and Band-Edge Measurement were per the Radiated Test Set-up specified in this document.

#### Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Loss, and subtracting Amplifier Gain from the measured reading. In this test facility, the Antenna Factor, Cable Loss, and Amplifier Gains are loaded into the Rohde & Schwarz Receiver and the corrected field strength can be read directly on the receiver.

$$FS = R + AF + CORR$$

where:

FS = Field Strength

R = Measured Receiver Input Amplitude

AF = Antenna Factor

CORR = Correction Factor = CL – AG + NFL

CL = Cable Loss

AG = Amplifier Gain

This test report may be reproduced in full only. The document may only be updated by MiCOM Labs personnel. All changes will be noted in the Document History section of the report.

**Title:** SALTO Systems AElement  
**To:** FCC Part 15 15.225 & IC RSS-210  
**Serial #:** APPU08-U2 Rev A  
**Issue Date:** 7<sup>th</sup> June 2017  
**Page:** 33 of 49

For example:

Given a Receiver input reading of 51.5dBmV; Antenna Factor of 8.5dB; Cable Loss of 1.3dB; Falloff Factor of 0dB, an Amplifier Gain of 26dB and Notch Filter Loss of 1dB. The Field Strength of the measured emission is:

$$FS = 51.5 + 8.5 + 1.3 - 26.0 + 1 = 36.3\text{dBmV/m}$$

Conversion between dBmV/m (or dBmV) and mV/m (or mV) are done as:

$$\text{Level (dBmV/m)} = 20 * \text{Log (level (mV/m))}$$

$$40 \text{ dBmV/m} = 100\text{mV/m}$$

$$48 \text{ dBmV/m} = 250\text{mV/m}$$

This test report may be reproduced in full only. The document may only be updated by MiCOM Labs personnel. All changes will be noted in the Document History section of the report.

#### Limits for Radiated Digital Emissions (0.03 – 1 GHz)

(a) Except as provided elsewhere in this subpart, the emissions from an intentional radiator shall not exceed the field strength levels specified in the following table:

Frequency (MHz)	Field Strength		Measurement Distance (m)
	$\mu\text{V/m}$ (microvolts/meter)	$\text{dB}\mu\text{V/m}$ (dB microvolts/meter)	
0.009-0.490	2400/F(kHz)	--	300
0.490-1.705	24000/F(kHz)	--	30
1.705-30.0	30	29.5	30
30-88	100**	40	3
88-216	150**	43.5	3
216-960	200**	46.0	3
Above 960	500	54.0	3

\*\*Except as provided in paragraph (g), fundamental emissions from intentional radiators operating under this section shall not be located in the frequency bands 54-72 MHz, 76-88 MHz, 174-216 MHz or 470-806 MHz. However, operation within these frequency bands is permitted under other sections of this part, e.g., §§15.231 and 15.241. (b) In the emission table above, the tighter limit applies at the band edges. (c) The level of any unwanted emissions from an intentional radiator operating under these general provisions shall not exceed the level of the fundamental emission. For intentional radiators which operate under the provisions of other sections within this part and which are required to reduce their unwanted emissions to the limits specified in this table, the limits in this table are based on the frequency of the unwanted emission and not the fundamental frequency. However, the level of any unwanted emissions shall not exceed the level of the fundamental frequency. (d) The emission limits shown in the above table are based on measurements employing a CISPR quasi-peak detector except for the frequency bands 9-90 kHz, 110-490 kHz and above 1000 MHz. Radiated emission limits in these three bands are based on measurements employing an average detector. (e) The provisions in §§15.31, 15.33, and 15.35 for measuring emissions at distances other than the distances specified in the above table, determining the frequency range over which radiated emissions are to be measured, and limiting peak emissions apply to all devices operated under this part. (f) In accordance with §15.33(a), in some cases the emissions from an intentional radiator must be measured to beyond the tenth harmonic of the highest fundamental frequency designed to be emitted by the intentional radiator because of the incorporation of a digital device. If measurements above the tenth harmonic are so required, the radiated emissions above the tenth harmonic shall comply with the general radiated emission limits applicable to the incorporated digital device, as shown in §15.109 and as based on the frequency of the emission being measured, or, except for emissions contained in the restricted frequency bands shown in §15.205, the limit on spurious emissions specified for the intentional radiator, whichever is the higher limit. Emissions which must be measured above the tenth harmonic of the highest fundamental frequency designed to be emitted by the intentional radiator and which fall within the restricted bands shall comply with the general radiated emission limits in §15.109 that are applicable to the incorporated digital device. (g) Perimeter protection systems may operate in the 54-72 MHz and 76-88 MHz bands under the provisions of this section. The use of such perimeter protection systems is limited to industrial, business and commercial applications.

#### **8.4. AC Mains Power Input/Output Ports**

**No tests required, EUT is battery powered with no connection to AC Mains Network.**

##### **Scope**

This test assesses the ability of the EUT to limit its internal noise from being present on the AC mains power input/output ports.

##### **Test Method**

The test method shall be in accordance with CISPR 22 and the Artificial Mains Networks (AMNs) shall be connected to the AC mains power source.

The measurement frequency range extends from 150 kHz to 30 MHz. When the EUT is a transmitter operating at frequencies below 30 MHz, then the exclusion band for transmitters applies for measurements in the transmit mode of operation.

##### **Test Procedure**

The conducted emissions are measured in a shielded room with a spectrum analyzer in peak hold in the first instance. Emissions closest to the limit are measured in the quasi-peak mode (QP) with the tuned receiver using a bandwidth of 9 kHz. The emissions are maximized further by cable manipulation. The highest emissions relative to the limit are listed.

## Limits

The equipment shall meet the class B limits given in CISPR 22. Alternatively, for equipment intended to be used in telecommunication centres only, the class A limits given in CISPR 22 may be used.

### Class B Emissions

Frequency of Emission (MHz)	Conducted Limit (dB $\mu$ V)	
	Quasi-peak	Average
0.15-0.5	66 to 56*	56 to 46*
0.5-5	56	46
5-30	60	50

\* Decreases with the logarithm of the frequency

### Class A Emissions

Frequency of Emission (MHz)	Conducted Limit (dB $\mu$ V)	
	Quasi-peak	Average
0.15-0.5	79	66
0.5-30	73	60

## Traceability

All conducted emission measurements are traceable to national standards. The uncertainty of measurement at a confidence level of not less than 95 %, with a coverage factor of k=2, in the range 9 kHz – 30 MHz (Average & Quasi-peak) is  $\pm 2.64$  dB.

Laboratory Measurement Uncertainty	
Measurement uncertainty	$\pm 2.64$ dB

Method
Measurements were made per work instruction WI-EMC-01 'Measurement of Conducted Emissions'

### Test Setup – Power Input / Output Port

IEC 1344/08

This test report may be reproduced in full only. The document may only be updated by MiCOM Labs personnel. All changes will be noted in the Document History section of the report.

## **8.5. Antenna Requirement**

### **8.5.1. Scope**

#### **Per FCC 15.203:**

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section.

### **8.5.2. Test Result**

EUT has a permanently attached antenna (PCB) with no provision for removal. EUT meets antenna requirement.
