TEST REPORT

of

FCC Part 15 Subpart C

New Application; Class I PC; Class II PC

Product :	TPMS
Brand:	MOBILETRON
Model:	TX-C001; TX-C002
Model Difference:	Variant in exterior looks.
FCC ID:	ULZ-TXC001
FCC Rule Part:	§15.231 (e)
Applicant:	Mobiletron Electronics Co., Ltd.
Address:	85, Sec.4, Chung-Ching Rd., Ta-Ya District, Taichung 428, Taiwan

Test Performed by:

International Standards Laboratory

<LT Lab.> *Site Registration No. BSMI: SL2-IN-E-0013; MRA TW1036; TAF: 0997; IC: IC4067B-4; *Address: No. 120, Lane 180, Hsin Ho Rd. Lung-Tan Dist., Tao Yuan City 325, Taiwan *Tel: 886-3-407-1718; Fax: 886-3-407-1738 Report No.: ISL-18LR305FC433

Issue Date : 2018/10/22

Test results given in this report apply only to the specific sample(s) tested and are traceable to national or international standard through calibration of the equipment and evaluating measurement uncertainty herein.

This report MUST not be used to claim product endorsement by TAF, NVLAP or any agency of the Government.

This test report shall not be reproduced except in full, without the written approval of International Standards Laboratory.

VERIFICATION OF COMPLIANCE

Applicant:	Mobiletron Electronics Co., Ltd.
Product Description:	TPMS
Brand Name:	MOBILETRON
FCC ID:	ULZ-TXC001
FCC Rule Part:	§15.231 (e)
Model No.:	TX-C001; TX-C002
Model Difference:	Variant in exterior looks.
Date of test:	2018/10/03 ~ 2018/10/19
Date of EUT Received:	2018/10/03

We hereby certify that:

All the tests in this report have been performed and recorded in accordance with the standards described above and performed by an independent electromagnetic compatibility consultant, International Standards Laboratory.

The test results contained in this report accurately represent the measurements of the characteristics and the energy generated by sample equipment under test at the time of the test. The sample equipment tested as described in this report is in compliance with the limits of above standards.

1. GENERAL INFORMATION

1.1 Product Description

Product Name	TPMS
Brand Name	MOBILETRON
Model Name	TX-C001; TX-C002
Model Difference	Variant in exterior looks.
Power Supply	3Vdc from coin battery
Device type	safety applications

TX:

Operating Frequency	433.92 MHz
Transmit Power	PK: 58.74 dBuV/m at 3 m (ASK) PK: 57.57 dBuV/m at 3 m (FSK)
Modulation Technique	ASK, FSK
Number of Channels	1
Periodic Transmission Time	ASK: Transmission period : every 0.038s, Ton: 60.082 FSK: Transmission period : every 0.036s, Ton: 61.882
Antenna Type	Loop Antenna

1.2 Related Submittal(s) / Grant (s)

This submittal(s) (test report) is intended for FCC ID: <u>ULZ-TXC001</u> filing to comply with Section 15.231 (e) of the FCC Part 15, Subpart C., Subpart C Rules filing to comply.

1.3 Test Methodology

Both conducted and radiated testing were performed according to the procedures in C63.10: 2013. Radiated testing was performed at an antenna to EUT distance 3 meters.

1.4 Test Facility

The measurement facilities used to collect the 3m Radiated Emission and AC power line conducted data are located on the address of **International Standards Laboratory** <LT Lab.> No. 120, Lane 180, Hsin Ho Rd., Lung-Tan Dist., Tao Yuan City 325, Taiwan which are constructed and calibrated to meet the FCC requirements in documents ANSI C63.10: 2013. FCC Registration Number is: 487532; Designation Number is: TW0997.

1.5 Special Accessories

Not available for this EUT intended for grant.

1.6 Equipment Modifications

Not available for this EUT intended for grant.

2. SYSTEM TEST CONFIGURATION

2.1 EUT Configuration

The EUT configuration for testing is installed on RF field strength measurement to meet the Commissions requirement and operating in a manner which intends to maximize its emission characteristics in a continuous normal application.

2.2 EUT Exercise

The EUT (Transmitter) was tested with a test program to fix the Tx frequency that was for the purpose of the measurements. For more information please see test data and APPENDIX 1 for set-up photographs.

2.3 Test Procedure

2.3.1 Conducted Emissions (Not apply in the report)

The EUT is a placed on as turn table which is 0.8 m above ground plane. According to the requirements in Section 6.2 of ANSI C63.10: 2013.Conducted emissions from the EUT measured in the frequency range between 0.15 MHz and 30MHz using CISPR 16-1-1 Quasi-Peak and Average detector mode.

2.3.2 Radiated Emissions

The EUT is a placed on as turn table which is 0.8 m/1.5m(Frequency above 1GHz) above ground plane. The turn table shall rotate 360 degrees to determine the position of maximum emission level. EUT is set 3m away from the receiving antenna which varied from 1m to 4m to find out the highest emission. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical. In order to find out the max. emission, the relative positions of this hand-held transmitter(EUT) was rotated through three orthogonal axes according to the requirements in Section 6 and 11 of ANSI C63.10: 2013.

2.4 Limitation

(1) Conducted Emission

	1	Limits	
Frequency range	dB (uV)		
MHz	Quasi-peak	Average	
0.15 to 0.50	66 to 56	56 to 46	
0.50 to 5	56	46	
5 to 30	60	50	
Note 1. The lower limit shall apply at the transition frequencies 2. The limit decreases linearly with the logerithm of the frequency in the range 0.15 MHz to 0.50 MHz			

(2) Radiated Emission

According to (e) Intentional radiators may operate at a periodic rate exceeding that specified in paragraph (a) of this section and may be employed for any type of operation, including operation prohibited in paragraph (a) of this section, provided the intentional radiator complies with the provisions of paragraphs (b) through (d) of this section, except the field strength table in paragraph (b) of this section is replaced by the following:

Fundamental frequency (MHz)	Field strength of fundamental (microvolts/meter)	Field strength of spurious emission (microvolts/meter)	
40.66-40.70	1,000	100	
70-130	500	50	
130-174	500 to 1,500 ¹	50 to 150 ¹	
174-260	1,500	150	
260-470	1,500 to 5,000 ¹	150 to 500 ¹	
Above 470	5,000	500	

¹Linear interpolations.

- Remark: 1. Emission level in dBuV/m=20 log (uV/m)
 - 2. Measurement was performed at an antenna to the closed point of EUT distance of meters.
 - 3. Only spurious frequency is permitted to locate within the Restricted Bands specified in provision of ξ 15.205
 - 4. Emission spurious frequency which appearing within the Restricted Bands specified in provision of ξ 15.205, then the general radiated emission limits in ξ 15.209 apply.
 - 5. For the band 130-174MHz, uV/m at 3meters = 22.72727 * F(MHz) 2454.545;
 For the band 260-470MHz uV/m at 3meters = 16.6667 * F(MHz) 2833.333;
 Where F is the frequency in MHz.
 - 6. 433.92MHz AV limit = 16.6667 * 433.92(MHz) 2833.333= 4398.68 uV/m = 72.86dBuV/m
 - 7. 433.92MHz Peak limit = AV Limit + 20dB = 92.86MHz

§15.203	Antenna Requirement	Compliant

4. Description of test modes

The EUT has been tested under engineering test mode condition and the EUT staying in continuous transmitting mode. The Frequency 433.92 MHz is chosen for testing.

5. AC CONDUCTED EMISSIONS TEST

5.1 Measurement Procedure:

- 1. The EUT was placed on a table which is 0.8m above ground plane.
- 2. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
- 3. Repeat above procedures until all frequency measured were complete.

5.2 Test SET-UP (Block Diagram of Configuration)

6. RADIATED EMISSION TEST

15.231 (e) Intentional radiators may operate at a periodic rate exceeding that specified in paragraph (a) of this section and may be employed for any type of operation, including operation prohibited in paragraph (a) of this section, provided the intentional radiator complies with the provisions of paragraphs (b) through (d) of this section, except the field strength table in paragraph (b) of this section is replaced by the following:

6.1 Measurement Procedure

- 1. The EUT was placed on a turn table which is 0.8/1.5 m above ground plane.
- 2. Maximum procedure was performed on the six highest emissions to ensure EUT compliance.
- 3. And also, each emission was to be maximized by changing the polarization of receiving antenna both horizontal and vertical.
- 4. Repeat above procedures until all frequency measured were complete.

6.3 Measurement Equipment Used:

6.4 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor and subtracting the Amplifier Gain and Duty Cycle Correction Factor (if any) from the measured reading. The basic equation with a sample calculation is as follows:

FS = RA + AF + CL - AG

Average Value = Peak Value + 20 Log (Ton/Tp)Pulse Modulation Duty Cycle Correction Factor

Where	FS = Field Strength	CL = Cable Attenuation Factor (Cable Loss)
	RA = Reading Amplitude	AG = Amplifier Gain
	AF = Antenna Factor

- 1 No further spurious emissions detected from the lowest internal frequency and 30MHz.
- 2 Measuring frequencies from the lowest internal frequency to the 1GHz.
- 3 Radiated emissions measured in frequency range from 30 MHz to 1000MHz were made with an instrument using Peak / QP detector mode.
- 4 Measurement result within this frequency range shown "-" in the table above means the reading of emissions are attenuated more than 20dB below the permissible limits or the field strength is too small to be measured.
- 5 The IF bandwidth of SPA between 30MHz to 1GHz was 100kHz, VBW=300kHz.

7. 20DB OCCUPIED BANDWIDTH

7.1 Measurement Procedure

- 1. The EUT was placed on a turn table which is 0.8m above ground plane.
- 2. Set EUT as normal operation
- 3. Set SPA Center Frequency = fundamental frequency, RBW= 10kHz, VBW= 30kHz, Span =3MHz.
- 4. Set SPA Max hold. Mark peak, -20dB.

7.2 Test SET-UP (Block Diagram of Configuration)

Same as 6.2 Radiated Emission Measurement.

7.3 Measurement Equipment Used:

Same as 6.3 Radiated Emission Measurement.

7.4 Measurement Results

Refer to attached data chart.

The center frequency f_c is 433.92MHz, according to the Rules, section 15.231(C), the Bandwidth of Center Frequency at-20dB should be calculated as following:

433.92 X 0.0025 = 1.0848(MHz)

So, the Uper/Lower frequencies limit should be specified as:

$$\begin{split} f_{(U)} &= f_c + \Delta \ f/2 = 433.92 + 0.5424 = 434.46 (MHz) \\ f_{(L)} &= f_c - \Delta \ f/2 = 433.92 - 0.5424 = 433.377 \ (MHz) \end{split}$$

7.5 Measurement Result: ASK: 49.4 kHz < limit 1.0848MHz FSK: 117 kHz < limit 1.0848MHz

8. DUTY CYCLE (AVERAGE CORRECTION FACTOR) MEASUREMENT

8.1 Measurement Procedure

- 1. The EUT was placed on a turn table which is 0.8m above ground plane.
- 2. Set ETU normal operating mode.
- 3. Set SPA Center Frequency = fundamental frequency, RBW, VBW= 1.0MHz, Span =0 Hz. Adjacent sweep.
- 4. Set SPA View. Mark delta.

8.2 Test SET-UP (Block Diagram of Configuration)

Same as 6.2 Radiated Emission Measurement.

8.3 Measurement Equipment Used:

Same as 6.3 Radiated Emission Measurement.

8.4 Measurement Results: N/A

Duty cycle correction factor is not used for average value.

9. SILENT PERIOD TIME MEASUREMENT:

15.231 (e)

devices operated under the provisions of this paragraph shall be provided with a means for automatically limiting operation so that the duration of each transmission shall not be greater than one second and the silent period between transmissions shall be at least 30 times the duration of the transmission but in no case less than 10 seconds.

9.1 Measurement Procedure

- 1. The EUT was placed on a turn table which is 0.8m above ground plane.
- 2. Set SPA Center Frequency = fundamental frequency, RBW, VBW= 1MHz, Span =0Hz
- 3. Set EUT Power on as normal operation
- 4. Set SPA Max hold. Delta Mark.

9.2 Test SET-UP (Block Diagram of Configuration)

Same as 6.2 Radiated Emission Measurement.

9.3 Measurement Equipment Used:

Same as 6.3 Radiated Emission Measurement.

9.4 Measurement Results

Total transmission time of transmissions calculation:

ASK: Ton: 0.038s, < 1s Tp: 60.12s silent period limit: 10s or 0.038s *30 = 1.14s T silent period = 60.12s - 0.038s = 60.082 s > 10s The result : PASS.

FSK: Ton: 0.036s, < 1s Tp: 61.92s silent period limit: 10s or 0.036s *30 = 1.08s T silent period = 61.92s - 0.038s = 61.882 s > 10s The result : PASS.
