Request for update to grant note and user manual for FCC ID: UMN-PSR-1400

Amphitech Systems would like to have the grant note modified on the recent equipment authorization for our PSR-1400 product (FCC ID: UMN-PSR-1400) to include both fixed and mobile applications. The original grant note referred to fixed outdoor applications only. Although fixed, outdoor applications are the primary application for the PSR-1400 product, mobile applications do also exist. Since the draft user manual that Amphitech submitted with our application only covered installation and safety issues for fixed applications, the manual has now been updated to address these issues for mobile deployments as well. Consequently, Amphitech requests that the draft user manual that is part of our application be updated with the new draft in order to adequately cover both fixed and mobile applications.

Sincerely,

Allan Klein
Program Manager
Amphitech Systems
