## 2 General information

### 2.1 Notes and disclaimer

The test results of this test report relate exclusively to the test item specified in this test report. CETECOM ICT Services GmbH does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item.

The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CETECOM ICT Services GmbH.

The testing service provided by CETECOM ICT Services GmbH has been rendered under the current "General Terms and Conditions for CETECOM ICT Services GmbH".

CETECOM ICT Services GmbH will not be liable for any loss or damage resulting from false, inaccurate, inappropriate or incomplete product information provided by the customer.

Under no circumstances does the CETECOM ICT Services GmbH test report include any endorsement or warranty regarding the functionality, quality or performance of any other product or service provided.

Under no circumstances does the CETECOM ICT Services GmbH test report include or imply any product or service warranties from CETECOM ICT Services GmbH, including, without limitation, any implied warranties of merchantability, fitness for purpose, or non-infringement, all of which are expressly disclaimed by CETECOM ICT Services GmbH.

All rights and remedies regarding vendor's products and services for which CETECOM ICT Services GmbH has prepared this test report shall be provided by the party offering such products or services and not by CETECOM ICT Services GmbH.

In no case this test report can be considered as a Letter of Approval.

This test report is electronically signed and valid without handwritten signature. For verification of the electronic signatures, the public keys can be requested at the testing laboratory.

| FVIN :  | ANT515                                   |
| S/N serial number :   | AB                                       |
| HW hardware status :  | n.a.                                     |
| SW software status :  | n.a.                                     |
| Frequency band :  | 13.56 MHz                                |
| Type of radio transmission :<br>Use of frequency spectrum : | single carrier                           |
| Type of modulation :  | ASK                                      |
| Number of channels :  | 1  |
| Antenna :   | Integrated antenna                       |
| Power supply :  | 19.2 V to 28.8 V DC by ext. power supply |
| Temperature range :   | -20°C to +60°C                           |

## 5.2 Additional information

The content of the following annexes is defined in the QA. It may be that not all of the listed annexes are necessary for this report, thus some values in between may be missing.

Test setup- and EUT-photos are included in test report:

1-1018/15-01-01\_AnnexA 1-1018/15-01-01\_AnnexB 1-1018/15-01-01\_AnnexD

## 6 Test laboratories sub-contracted

None

### 7 Description of the test setup

Typically, the calibrations of the test apparatus are commissioned to and performed by an accredited calibration laboratory. The calibration intervals are determined in accordance with the DIN EN ISO/IEC 17025. In addition to the external calibrations, the laboratory executes comparison measurements with other calibrated test systems or effective verifications. Weekly chamber inspections and range calibrations are performed. Where possible, RF generating and signaling equipment as well as measuring receivers and analyzers are connected to an external high-precision 10 MHz reference (GPS-based or rubidium frequency standard).

In order to simplify the identification of the equipment used at some special tests, some items of test equipment and ancillaries can be provided with an identifier or number in the equipment list below (Lab/Item).

#### Agenda: Kind of Calibration

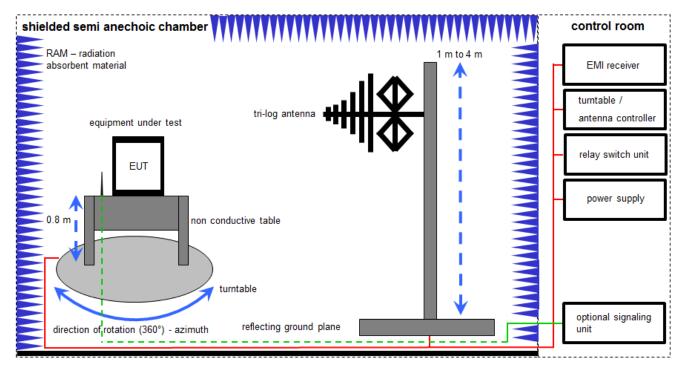

- k calibration / calibrated
- ne not required (k, ev, izw, zw not required)
- ev periodic self verification
- Ve long-term stability recognized
- vlkl! Attention: extended calibration interval
- NK! Attention: not calibrated

- EK limited calibration
- zw cyclical maintenance (external cyclical maintenance)
- izw internal cyclical maintenance
- g blocked for accredited testing
- \*) next calibration ordered / currently in progress

## 7.1 Shielded semi anechoic chamber

The radiated measurements are performed in vertical and horizontal plane in the frequency range from 9 kHz to 1 GHz in semi-anechoic chambers. The EUT is positioned on a non-conductive support with a height of 0.80 m above a conductive ground plane that covers the whole chamber. The receiving antennas are confirmed with specifications ANSI C63. These antennas can be moved over the height range between 1.0 m and 4.0 m in order to search for maximum field strength emitted from EUT. The measurement distances between EUT and receiving antennas are indicated in the test setups for the various frequency ranges. For each measurement, the EUT is rotated in all three axes until the maximum field strength is received. The wanted and unwanted emissions are received by spectrum analyzers where the detector modes and resolution bandwidths over various frequency ranges are set according to requirement ANSI C63.

Measurement distance: tri-log antenna 10 meter

FS = UR + CL + AF

(FS-field strength; UR-voltage at the receiver; CL-loss of the cable; AF-antenna factor)

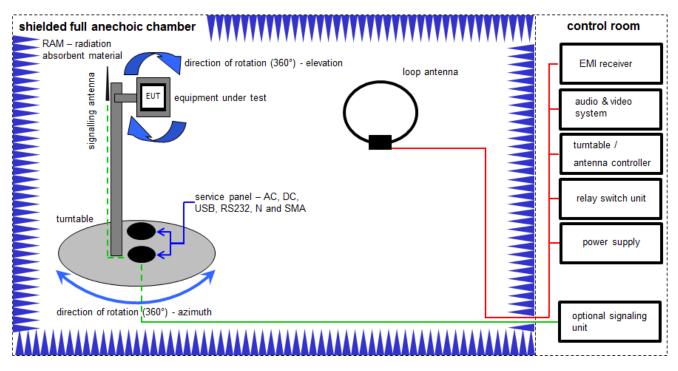

#### Example calculation:

 $FS [dB\mu V/m] = 12.35 [dB\mu V/m] + 1.90 [dB] + 16.80 [dB/m] = 31.05 [dB\mu V/m] (35.69 \mu V/m)$

### 8 Sequence of testing

### 8.1 Sequence of testing radiated spurious 9 kHz to 30 MHz

#### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a 2-axis positioner with 1.5 m height is used.
- If the EUT is a floor standing device, it is placed directly on the turn table.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

#### Premeasurement

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna height is 1.5 m.
- At each turntable position the analyzer sweeps with positive-peak detector to find the maximum of all emissions.

#### Final measurement

- Identified emissions during the premeasurement are maximized by the software by rotating the turntable from 0° to 360°. In case of the 2-axis positioner is used the elevation axis is also rotated from 0° to 360°.
- The final measurement is done in the position (turntable and elevation) causing the highest emissions with quasi-peak (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, turntable position, correction factor, margin to the limit and limit will be recorded. A plot with the graph of the premeasurement and the limit is stored.

## 8.2 Sequence of testing radiated spurious 30 MHz to 1 GHz

#### Setup

- The equipment is set up to simulate normal operation mode as described in the user manual or defined by the manufacturer.
- If the EUT is a tabletop system, a table with 0.8 m height is used, which is placed on the ground plane.
- If the EUT is a floor standing device, it is placed on the ground plane with insulation between both.
- Auxiliary equipment and cables are positioned to simulate normal operation conditions as described in ANSI C 63.4.
- The AC power port of the EUT (if available) is connected to a power outlet below the turntable.
- Measurement distance is 10 m or 3 m (see ANSI C 63.4) see test details.
- EUT is set into operation.

#### Premeasurement

- The turntable rotates from 0° to 315° using 45° steps.
- The antenna is polarized vertical and horizontal.
- The antenna height changes from 1 m to 3 m.
- At each turntable position, antenna polarization and height the analyzer sweeps three times in peak to find the maximum of all emissions.

#### Final measurement

- The final measurement is performed for at least six highest peaks according to the requirements of the ANSI C63.4.
- Based on antenna and turntable positions at which the peak values are measured the software maximize the peaks by changing turntable position ± 45° and antenna height between 1 and 4 m.
- The final measurement is done with quasi-peak detector (as described in ANSI C 63.4).
- Final levels, frequency, measuring time, bandwidth, antenna height, antenna polarization, turntable angle, correction factor, margin to the limit and limit are recorded. A plot with the graph of the premeasurement with marked maximum final results and the limit is stored.

#### 9 Measurement uncertainty

| Measurement uncertainty                     |  |  |  |  |  |  |
|---|--|--|--|--|--|--|
| Test case                                   | Uncertainty                              |  |  |  |  |  |
| Spectrum bandwidth                          | ± 21.5 kHz absolute; ± 15.0 kHz relative |  |  |  |  |  |
| Maximum output power                        | ± 1 dB                                   |  |  |  |  |  |
| Spurious emissions radiated below 30 MHz    | ± 3 dB                                   |  |  |  |  |  |
| Spurious emissions radiated 30 MHz to 1 GHz | ± 3 dB                                   |  |  |  |  |  |
| Frequency error                             | ± 10 Hz                                  |  |  |  |  |  |

## 12 Measurement results

### 12.1 Occupied bandwidth

#### Measurement:

The emission bandwidth (x dB) is defined as the frequency range between two points, one above and one below the carrier frequency, at which the spectral density of the emission is attenuated x dB below the maximum in-band spectral density of the modulated signal.

| Measurement parameters   |                                     |  |  |  |
|--------------------------|-------------------------------------|--|--|--|
| Detector:                | Peak                                |  |  |  |
| Resolution bandwidth:    | 1 % - 5 % of the occupied bandwidth |  |  |  |
| Video bandwidth:         | ≥ 3x RBW                            |  |  |  |
| Trace mode:              | Max hold                            |  |  |  |
| Analyser function:       | 99 % power function                 |  |  |  |
| Used equipment:          | See chapter 7.4 A                   |  |  |  |
| Measurement uncertainty: | See chapter 9                       |  |  |  |

#### Limit:

## **12.4 Conducted limits**

### Measurement:

Measurement of the conducted spurious emissions for an intentional radiator that is designed to be connected to the public utility (AC) power line.

| Measurement parameters   |                              |  |
|--------------------------|------------------------------|--|
| Detector:                | Quasi peak / average or      |  |
| Delector.                | peak (worst case – pre-scan) |  |
| Resolution bandwidth:    | F < 150 kHz: 200 Hz          |  |
| Resolution bandwidth.    | F > 150 kHz: 9 kHz           |  |
| Video bandwidth:         | F < 150 kHz: 1 kHz           |  |
|                          | F > 150 kHz: 100 kHz         |  |
| Trace mode:              | Max hold                     |  |
| Used equipment:          | See chapter 7.3 A            |  |
| Measurement uncertainty: | See chapter 9                |  |

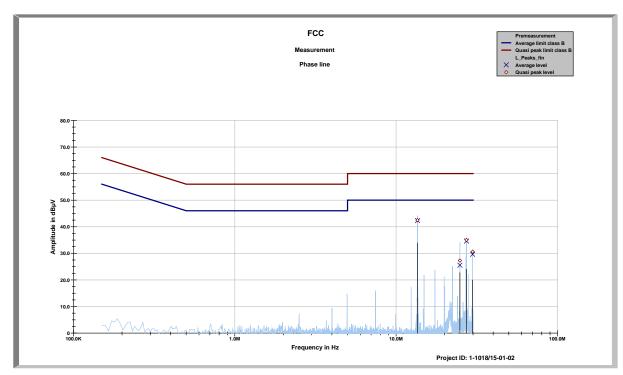

### Limit:

|            | FCC & IC   |           |
|------------|------------|-----------|
| Frequency  | Quasi-peak | Average   |
| (MHz)      | (dBµV/m)   | (dBµV/m)  |
| 0.15 – 0.5 | 66 to 56*  | 56 to 46* |
| 0.5 – 5    | 56         | 46        |
| 5 - 30.0   | 60         | 50        |

### Plots:

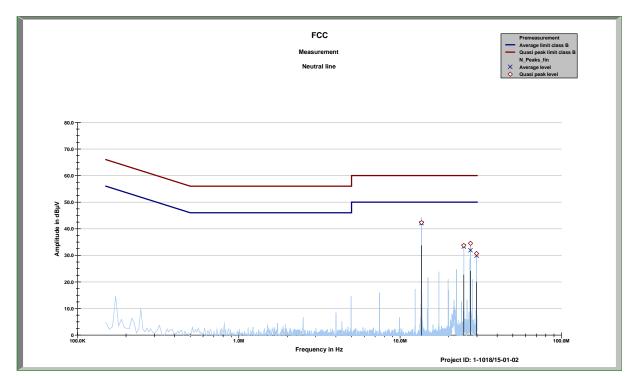

| Frequency | Quasi peak<br>level | Margin quasi<br>peak | Average level | Margin average |
|-----------|---------------------|----------------------|---------------|----------------|
| MHz       | dBμV                | dBμV                 | dBμV          | dBµV           |
|           |                     |                      |               |                |
| 13.562    | 42.47               | 17.53                | 42.29         | 7.71           |
| 24.838    | 27.29               | 32.71                | 25.54         | 24.46          |
| 27.317    | 35.04               | 24.96                | 34.60         | 15.40          |
| 29.8023   | 30.63               | 29.37                | 29.64         | 20.36          |

Plot 2: 150 kHz to 30 MHz, neutral line

| Frequency | Quasi peak<br>level | Margin quasi<br>peak | Average level | Margin average |
|-----------|---------------------|----------------------|---------------|----------------|
| MHz       | dBμV                | dBµV                 | dBμV          | dBµV           |
|           |                     |                      |               |                |
| 13.562    | 42.31               | 17.69                | 42.10         | 7.90           |
| 24.818    | 33.73               | 26.27                | 33.32         | 16.68          |
| 27.307    | 34.53               | 25.47                | 31.92         | 18.08          |
| 29.7879   | 30.69               | 29.31                | 29.88         | 20.12          |

### 12.5 Frequency error

#### Measurement:

The maximum detected field strength for the spurious.

| Measurement parameters   |                   |  |
|--------------------------|-------------------|--|
| Detector:                | Peak detector     |  |
| Resolution bandwidth:    | 10 Hz / 100 Hz    |  |
| Video bandwidth:         | > RBW             |  |
| Trace mode:              | Max hold          |  |
| Used equipment:          | See chapter 7.4 A |  |
| Measurement uncertainty: | See chapter 9     |  |

### Limit:

FCC The frequency tolerance of the carrier signal shall be maintained within +/- 0.01% of the operating frequency over a temperature variation of -20 degrees to +60 degrees C at normal supply voltage, and for a variation in the primary supply voltage from 85% to 115% of the rated supply voltage at a temperature of 20 degrees C. (±1.356 kHz)

## Result: Temperature variation

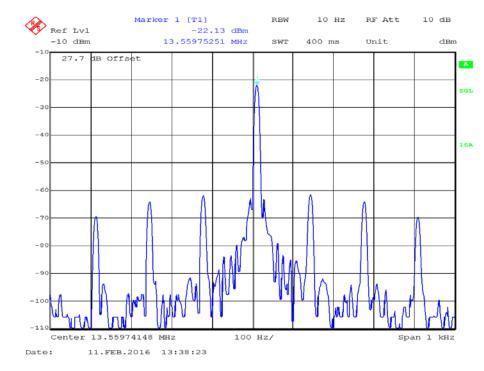

|                             | Frequency tolerance   |           |
|-----------------------------|-----------------------|-----------|
| Measured frequency<br>(MHz) | Conditions            | Result    |
| 13.559640                   | -20 °C & 100% voltage | compliant |
| 13.559495                   | -10 °C & 100% voltage | compliant |
| 13.559454                   | 0 °C & 100% voltage   | compliant |
| 13.559737                   | +10 °C & 100% voltage | compliant |
| 13.559708                   | +20 °C & 100% voltage | compliant |
| 13.559718                   | +30 °C & 100% voltage | compliant |
| 13.559704                   | +40 °C & 100% voltage | compliant |
| 13.559627                   | +50 °C & 100% voltage | compliant |
| 13.559753                   | +60 °C & 100% voltage | compliant |

### Result: Voltage variation

|                             | Frequency tolerance   |           |
|-----------------------------|-----------------------|-----------|
| Measured frequency<br>(MHz) | Temperature           | Result    |
| 13.559711                   | +20 °C & 85% voltage  | compliant |
| 13.559708                   | +20 °C & 100% voltage | compliant |
| 13.559721                   | +20 °C & 115% voltage | compliant |

#### Annex C **Accreditation Certificate**

Front side of certificate

Deutsche Akkreditierungsstelle GmbH

Bellehene gemäß § 8 Absatz 1 AkkStelleG i.V.m. § 1 Absatz 1 AkkStelleGBV Unterzeichnerin der Multilateralen Abkommen von EA, ILAC und IAF zur gegenseitigen Anerkennung

#### 行家 Akkreditierung

Die Deutsche Akkreditierungsstelle GmbH bestätigt hiermit, dass das Prüflaboratorium CETECOM ICT Services GmbH

Untertürkheimer Straße 6-10, 66117 Saarbrücken

die Kompetenz nach DIN EN ISO/IEC 17025:2005 besitzt, Prüfungen in folgenden Bereichen durchzuführen:

durchzuführen: Drahtgebundene Kommunikation einschließlich xDSL VolP und DECT Akustik Funk einschließlich VULAN Short Range Devices (SRD) RFID WIMax und Richtfunk Mobilfunk (SRM / DCS, Over the Air (OTA) Performance) Elektromagnetische Verträglichkeit (EMV) einschließlich Automotive Produktsicherheit SAR und Hearing Aid Compatibility (HAC) Umweltsimulation Smart Card Terminals Bluetooth Wi-Fi- Services

Die Akkreditierungsurkunde gilt nar in Verbindung mit dem Bescheid vom 07.03.2014 mit der Akkreditierungseummer D-PL-17076-01 und ist giltig 17.01.2018. Sie besteht aus diesem Deckblant, der Rückseite des Deckblants und der fulgenden Anlage mit Ingesamt 77 Seiten.

Registrierungsnummer der Urkunde: D-PL-12076-01-00

Die suzzugsweise Neröffertlichung der Aktreditierungsurkunde bestanf der verherigen schriftlichen Zuzimmung der Deutsche Akkrediterungszeile Grobel (DAMS). Ausgenemmen davon ist die separate Weisnerventung des Deutschattes durch die umsetig genemme Kanformitikkowerbungszallte in uwerd offerter Form.

Es darf nicht der Anschein erweckt werden, dass sich die Akkred lierung auch auf Bereiche erstreckt, die über den durch die DAkkS bestätigten Akkreditierungsbereich hinausgehen.

Die Akkreditierung erfolgte gemäß des Gesetzes über din Akkreditierungsstelle (Akkstelles) vom 31 Juli 2005 (HGRI, I.S. 2023) woek der Veroritrung (FGI, Nr. 765/2028 des Europäischen Parlamette und des Rites vom S. Juli 2006 (Hdr. die Versichtlicht die die Akkreditierung und Marktüberweiburg im Zuammenhang mit der Vernanklung von Produktion (AbL, 2018 vom S. Juli 2008; S. 30). Die DAkk 51 der Unter- chrenit der Vaulifikation (Abl. 2018 vom S. Juli 2008; S. 30). Die DAkk 51 der Unter- chrenit der Vaulifikation in Akkreditierung auf Marktüberung der Europera en operation für Azereditation (Ed., das Heimatten) Azereditation Form (Ar.) and der intermitiant laberlihrer Azereditation Cooperation (LAC). Die Unteracitier elser Abkommen erkonnen ihre Akkreditierungen gegenzeitig an.
