Description of differences of models

ifm article No.	Description of differences
DTA100	Test sample of the group. Identification system read/write head with integrated AS-i (actuator sensor interface) Slave profile 7.4
DTA101	Difference to DTA100 Identification system read head only; it is not possible to write a TAG, therefore an other AS-i profile 7.3 also. Identical to DTA100 with regard to the technical design of the radio frequency system.
DTC001	Difference to DTA100 Customer specific model. Identification system read/write head with integrated AS-i profile 7.4 with 1 Bit difference to DTA100 so that communication is possible with the customer TAG only. Identical to DTA100 with regard to the technical design of the radio frequency system.
