

Operation Description for R/C Terrain Hunter

The R/C Terrain Hunter is powered by a 1 x 9V size battery and two control sticks in the EUT. When the forward, backward, turn left and turn right stick is pressed once, it will transmit different radio signal to receiver.

Referring to the transmitter circuit design, the circuit description is listed below:

- U1 and associated circuit act as encoder.
- Y1 Q1 and associated circuit act as oscillator.
- Q? and associated circuit act as RF amplify.
