

Nikola Jr Transmitter and Receiver Bottom Panels with proposed FCC and S/N indentation locations.

(Rip has all the specs needed to complete by 12/12/08)

Font size for FCC spec
to = 7 points

Outer diameter of sticker
= 29mm W x 15mm H.

Indentation area in bottom panels
need an inner diameter of
30mm x 16mm (minimum)
(shown in red dashed outline)

Indentation needed just above the curvature of
the bottom portion of rear panel for the S/N sticker.

To be the same dimensions
as used on GVO's bottom panel indentation.
(i don't have those dimensions. The outline shown
here is for reference only...)

Indentation needed for the S/N sticker
here. (Again Outline for reference only as
I don't have the SN sticker's dimensions but
it should be centered in this area.)

We have more room on the bottom
panel of the Receiver but require the
same minimum indentation diameter
as shown above for the FCC Sticker.

Note: FCC sticker
will be released upon
receiving our ID and
IC numbers.
