

COMPLIANCE WORLDWIDE INC. TEST REPORT 346-22

In Accordance with the Requirements of

Federal Communications Commission CFR Title 47 Part 15.247, Subpart C Digital Transmission Systems Frequency Hopping

Issued to PICA Product Development, LLC 4 Ash Street Extension Derry, NH 03038

> for the Skyhawk Hub Model: HUBPVZGFH

FCC ID: UOXSKYHAWKHUBTYP2

Report Issued on April 27, 2023

Tested by Sean P. Defelice

Reviewed by

1. Scope

This test report certifies that The PICA Product Development Skyhawk Hub, as tested, meets the FCC Part 15, Subpart C requirements. The scope of this test report is limited to the test sample provided by the client, only in as much as that sample represents other production units. If any significant changes are made to the unit, the changes shall be evaluated and a retest may be required.

2. Product Details

- 2.1. Manufacturer: PICA Product Development
- 2.2. Model Number: HUBPVZGFH
- 2.3 Serial Number: SHH224800002
- **2.4 Description of EUT:** Skyhawk's Hub is a cost-effective multi-trap monitoring solution that allows rodent control technicians to monitor deployed traps and bait stations more efficiently.
- **2.5 Power Source:** 4.5 VDC (3 AA Batteries)
- 2.6 Hardware Revision: Rev E
- 2.7 Software Revision: N/A
- 2.8. Modulation Type: Frequency Hopping Spread Spectrum
- 2.9. Operating Frequencies: 906-923.5 MHz
- 2.10. EMC Modifications: None

3. Product Configuration

3.1. EUT Hardware

Manufacturer	Model	Serial Number	Input Volts	Freq (Hz) Or DC	Description/Function

4. Measurements Parameters (continued)

4.2. Measurement & Equipment Setup

Test Dates:

Test Engineers: Normal Site Temperature (15 - 35°C): Relative Humidity (20 -75%RH): Frequency Range: Measurement Distance:

EMI Receiver IF Bandwidth:

EMI Receiver Avg Bandwidth: Detector Function:

2/14/2023, 2/15/2023, 4/26/2023, 4/27/2023 Sean Defelice 21.2 33 30 kHz to 9.4 GHz 3 & 1 Meters 200 Hz - 30 to 150 kHz 9 kHz - 150 kHz to 30 MHz 120 kHz - 30 MHz to 1 GHz 1 MHz - Above 1 GHz ≥ 3 * RBW or IF(BW) Peak, Quasi-Peak & Average

4.3. Measurement Procedure

Testing was performed in accordance with the requirements detailed in ANSI C63.10-2013, American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices. In addition, FCC DA 00-705, Filing and Measurement Guidelines for Frequency Hopping Spread Spectrum Systems, was also referenced.

Test measurements were made in accordance with FCC Part 15.247, ANSI C63.10-2013.

The test methods used to generate the data in this test report is in accordance with ANSI C63.10-2013, American National Standard for Testing Unlicensed Wireless Devices.

4.4. Measurement Uncertainty

The following uncertainties are expressed for an expansion/coverage factor of K=2.

RF Frequency	± 1x10 ⁻⁸
Radiated Emission of Transmitter	± 4.55 dB
Radiated Emission of Receiver	± 4.55 dB
Temperature	± 0.91° C
Humidity	± 5%

5. Choice of Equipment for Test Suites

5.1 Choice of Model

This test report is based on the test samples supplied by the manufacturer and are reported by the manufacturer to be equivalent to the production units.

5.2 Presentation

This test sample was tested complete with all required ancillary equipment. Refer to Section 3 of this report for product equipment configuration.

5.3 Choice of Operating Frequencies

The product utilizes 50 channels in the 906 MHz to 923.5 MHz frequency range. In accordance with ANSI C63.10-2013, Section 5.6, three channels are detailed in this test report:

In accordance with ANSI C63.10-2013, Section 5.6, the choice of operating frequencies selected for the testing outlined in this report was based on the lowest, middle and highest operating frequencies. The frequencies selected were:

- Low Channel 906.00 MHz
- Middle Channel 912.75 MHz
- High Channel 923.50 MHz

5.4. EUT Positions for Emissions Measurements

The device under test was tested in two orthogonal positions in accordance with ANSI C63.10-2013, Section 5.10.1 to represent either wall or ceiling mounted configurations.

6. Measurement Summary

Spurious Radiated Emissions (> GHz) - Harmonic Measurements	15.209	7.7	Compliant	
Conducted Emissions	FCC 15.207	7.8	N/A	EUT operates on AA Batteries

Page 7 of 42

7. Measurement Data

7.1. Antenna Requirement (Section 15.203)

- Requirement: An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this Section.
- Status: The antenna is an external whip antenna connected via a reverse polarity SMA connector.

7.2. Frequency Hopping Requirements (Section 15.247 (a))

Requirements: Frequency hopping systems shall have hopping channel carrier frequencies separated by a minimum of 25 kHz or the 20 dB bandwidth of the hopping channel, whichever is greater.

For frequency hopping systems operating in the 902-928 MHz band: if the 20 dB bandwidth of the hopping channel is less than 250 kHz, the system shall use at least 50 hopping frequencies and the average time of occupancy on any frequency shall not be greater than 0.4 seconds within a 20 second period; if the 20 dB bandwidth of the hopping channel is 250 kHz or greater, the system shall use at least 25 hopping frequencies and the average time of occupancy on any frequency shall not be greater than 0.4 seconds within a 10 second period. The maximum allowed 20 dB bandwidth of the hopping channel is 500 kHz.

7.2.1. 20 dB Bandwidth

Channel	Frequency (MHz)	20 dB Bandwidth (kHz)	Maximum 20 dB Bandwidth (kHz)	Result
Low	906.00	15.984	250	Compliant
Mid	912.75	15.784	250	Compliant
High	923.50	15.534	250	Compliant

7.2. Frequency Hopping Requirements (Section 15.247 (a) (continued)

7.2.1. 20 dB Bandwidth (continued)

Date: 15.FEB.2023 11:50:44

7.2.1.2. 20 dB Bandwidth – Middle Frequency

Date: 15.FEB.2023 11:20:18

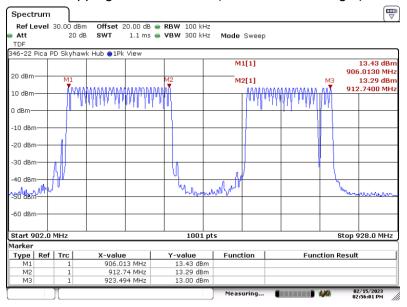

7.2. Frequency Hopping Requirements (Section 15.247 (a) (continued)

7.2.1. 20 dB Bandwidth (continued)

7.2.1.3. 20 dB Bandwidth – High Frequency

7.2.2. Number of Hopping Channels = 50 (28 on left, 22 on right)

Date: 15.FEB.2023 14:56:01

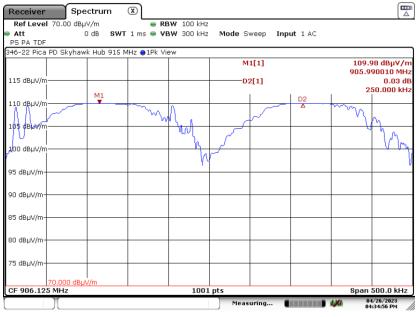

7.2. Frequency Hopping Requirements (Section 15.247 (a) (continued)

7.2.3. Channel Separation

Channel	Channel Pair	Channel Separation (kHz)	Required Channel Separation (kHz)	Result	
Low	903.00	250	25	Compliant	
LOW	903.25	200	20		
Middle	912.50	250	25	Compliant	
Midule	912.75	230	25	Compliant	
High	923.25	250	25	Compliant	
High	923.50	200	20	Compliant	

7.2.3.1. Channel Separation - Low Channels

Date: 26.APR.2023 16:34:56

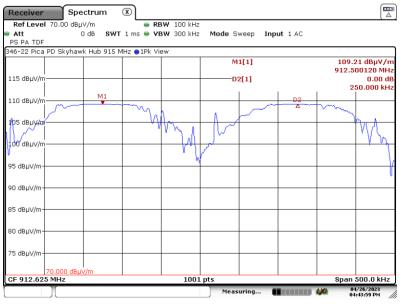

7.2. Frequency Hopping Requirements (Section 15.247 (a) (continued)

7.2.3. Channel Separation

Date: 26.APR.2023 16:43:59

7.2.3.3. Channel Separation - High Channels

7.2. Frequency Hopping Requirements (Section 15.247 (a) (continued)

7.2.4. Average Time of	Occupancy per Period	(Period = 20 Seconds)

Channel	Frequency (MHz)	Pulse Width (Sec)	Avg Time per Period (20 Seconds)	Maximum Time per Period	Result
Low	906.00	0.1628	0.163	0.400	Compliant
Middle	912.75	0.1628	0.163	0.400	Compliant
High	923.50	0.1628	0.163	0.400	Compliant

Note: One Pulse occurs every 20 seconds, as it hops one cycle of 50 channels and then mutes for the remaining 20 second cycle.

7.3. Maximum Peak Conducted Output Power (Section 15.247 (b))

Requirements: The maximum peak conducted output power of the intentional radiator shall not exceed the following: For frequency hopping systems operating in the 902-928 MHz band: 1 watt for systems employing at least 50 hopping channels; and, 0.25 watts for systems employing less than 50 hopping channels, but at least 25 hopping channels, as permitted under paragraph (a)(1)(i) of this section.

Channel	Frequency (MHz)	Max Conducted Output Power (dBm)	Max Peak Conducted Output Power (Watts)	Limit (Watts)	Result

7.3. Maximum Peak Conducted Output Power (Section 15.247 (b)) (continued)

7.3.2. Maximum Peak Conducted Output Power – Middle Channel

7.3.3. Maximum Peak Conducted Output Power – High Channel

Date: 15.FEB.2023 13:52:07

7.4. Operation with Directional Antenna Gains Greater than 6 dBi (Section 15.247 (c))

Requirement: Fixed Point-to-Point Operation:

If transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of FCC Part 15.247, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

Systems operating in the 2400 – 2483.5 MHz band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6 dBi provided the maximum peak output power of the intentional radiator is reduced by 1 dB for every 3 dB that the directional gain of the antenna exceeds 6 dBi.

Systems operating in the 5725 – 5850 MHz band that are used exclusively for fixed, point-to-point operations may employ transmitting antennas with directional gain greater than 6 dBi without any corresponding reduction in transmitter peak output power.

- Procedure: Not applicable for the device under test.
- EUT Status: The EUT utilizes an antenna with an approximate peak gain of 2 dBi, and therefore is exempt from this requirement.

7.5. Emissions Outside the Frequency Band (Section 15.247 (d))

- Requirements: In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits.
- Test Notes: Peak in-band measurements were taken using 100 kHz RBW. These values were used as the reference levels for the following measurements.

Reference Appendix A for the measurement data used for this test section.

Results: The DUT met the 20 dB requirement emission level delta requirement in the non restricted frequency bands.

Emissions in Non-restricted Frequency Bands

Maximum PSD (100 kHz) In-Band ¹ (dBm)	Worst Case Out-of-Band Frequency (MHz)	Maximum PSD (100 kHz) Out-of-Band (dBm)	Minimum Required Delta (dBm)	Result

7.7. Spurious Radiated Emissions – Harmonic Emissions

- Notes: 1. Harmonic emissions detailed in the following tables represent the frequencies that fall within the restricted bands of operation per FCC Part 15.205.
 - 2. For each emission, the worst-case polarity is tabled.

7.7.1. Spurious Radiated Emissions (Harmonic Measurements) Test Results

Freq. (MHz)	Field Strength (dBµV/m)		Limit (dBµV/m)		Margin (dBµV/m)		Antenna Polarity	Result
(11112)	Peak	Average	Peak	Average	Peak	Average	(H/V)	
2718.00	55.95	48.97	74.00	54.00	-18.05	-5.03	V	Compliant
3624.00	48.11	35.94	74.00	54.00	-25.89	-18.06	V	Compliant
4530.00	53.09	43.74	74.00	54.00	-20.91	-10.26	Н	Compliant
5436.00	49.79	37.62	74.00	54.00	-24.21	-16.38	V	Compliant
8154.00	55.54	42.60	74.00	54.00	-18.46	-11.40	Н	Compliant
9060.00	52.25	40.35	74.00	54.00	-21.75	-13.65	Н	Compliant

7.7.1.1. Lowest Frequency (906.00 MHz)

7.7.1.2. Middle Frequency (912.75 MHz)

Freq. (MHz)	Field Strength (dBµV/m)		Limit (dBµV/m)		Margin (dBµV/m)		Antenna Polarity	Result
	Peak	Average	Peak	Average	Peak	Average	(H/V)	
2738.25	56.65	48.88	74.00	54.00	-17.35	-5.12	V	Compliant
3651.00	48.47	36.00	74.00	54.00	-25.53	-18.00	V	Compliant
4563.75	54.27	45.52	74.00	54.00	-19.73	-8.48	V	Compliant
7302.00	53.37	40.86	74.00	54.00	-20.63	-13.14	V	Compliant
8214.75	55.08	42.79	74.00	54.00	-18.92	-11.21	V	Compliant
9127.50	53.26	40.59	74.00	54.00	-20.74	-13.41	Н	Compliant

7.7.1.3. Highest Frequency (923.50 MHz)

Freq. (MHz)	Field Strength (dBµV/m)		Limit (dBµV/m)		Margin (dBµV/m)		Antenna Polarity	Result
(11112)	Peak	Average	Peak	Average	Peak	Average	(H/V)	
2770.50	56.22	48.68	74.00	54.00	-17.78	-5.32	Н	Compliant
3694.00	48.34	36.17	74.00	54.00	-25.66	-17.83	V	Compliant
4617.50	53.46	45.00	74.00	54.00	-20.54	-9.00	Н	Compliant
7388.00	53.24	40.77	74.00	54.00	-20.76	-13.23	Н	Compliant
8311.50	55.76	43.05	74.00	54.00	-18.24	-10.95	Н	Compliant

¹ The tabled frequencies are those listed in the restricted bands of operation.

² All correction factors are stored in the spectrum analyzer and applied to this column entry.

Page 31 of 42

7.8. Conducted Emissions

Requirement: 15.207 With certain exceptions, an intentional radiator that is designed to be connected to the public utility (AC) power line, the radio frequency voltage that is conducted back onto the AC power line on any frequency or frequencies, within the band 150 kHz to 30 MHz, shall not exceed the limits in the following table, as measured using a 50 µH/50 ohms line impedance stabilization network (LISN).

Frequency Range (MHz)		nits βµV)				
()	Quasi-Peak	Average				
0.15 to 0.50	66 to 56*	56 to 46*				
0.50 to 5.0 56 46						
5.0 to 30.0 60 50						
* Decreases with the logarithm of the frequency.						

- Procedure: This test was performed in accordance with the procedure detailed in ANSI C63.10-2013, Section 6.2: Standard test method for ac power-line conducted emissions from unlicensed wireless devices.
- Test Notes: The device was tested using the support equipment laptop.
- Results: The device under test meets the FCC Part 15.207 test requirements.

Measurement & Equipment Setup

Test Date:	N/A
Test Engineer:	N/A
Site Temperature (°C):	N/A
Relative Humidity (%RH):	N/A
Frequency Range:	0.15 MHz to 30 MHz
EMI Receiver IF Bandwidth:	9 kHz
EMI Receiver Avg Bandwidth:	>= 3 * IF BW (RBW)
Detector Functions:	Peak, Quasi-Peak & Average

- Note: EUT is powered via AA Batteries which are not rechargeable
- Sample Calculation: Final Result $(dB\mu V)$ = Measurement Value $(dB\mu V)$ + LISN Insertion Loss (dB) + Cable Loss (dB).

Note: All correction factors are loaded into the measurement instrument prior to testing to determine the final result.

8. Test Site Description

Compliance Worldwide is located at 357 Main Street in Sandown, New Hampshire. The test sites at Compliance Worldwide are used for conducted and radiated emissions testing in accordance with the Federal Communications Commission (FCC) and Industry Canada standards. Through our American Association for Laboratory Accreditation (A2LA) ISO Guide 17025 Accreditation our test sites are designated with the FCC (designation number **US1091**), Industry Canada (file number **IC 3023A-1)** and VCCI (Member number 3168) under registration number A-0274.

Compliance Worldwide is also designated as a Phase 1 CAB under APEC-MRA (US0132) for Australia/New Zealand AS/NZS CISPR 32, Chinese-Taipei (Taiwan) BSMI CNS 13438 and Korea (RRA) KN 11, KN 13, KN 14-1, KN 22, KN 32, KN 61000-6-3, KN 61000-6-4.

The radiated emissions test site is a 3 and 10 meter enclosed open area test site (OATS). Personnel, support equipment and test equipment are located in the basement beneath the OATS ground plane.

The conducted emissions site is part of a 16' x 20' x 12' ferrite tile chamber and uses one of the walls for the vertical ground plane. A second conducted emissions site is also located in the basement of the OATS site with a 2.3 x 2.5 meter ground plane and a 2.4 x 2.4 meter vertical wall.

The radiated emissions test site for measurements above 1GHz is a 3 Meter open area test site (OATS) with a 3.6 by 3.6 meter anechoic absorber floor patch to achieve a quasi-free space measurement environment per ANSI C63.4/C63.10 and CISPR 16-1-4 standards.

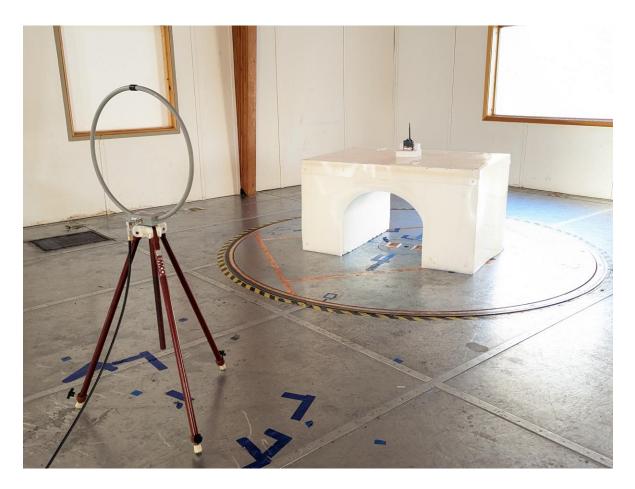

The sites are designed to test products or systems 1.5 meters W x 1.5 meters L x 2.0 meters H, floor standing or table top.
