Re: FCC filing of Part-15 Report for Model PC50 with Ferrite, per TCB  
Date: November 6, 2006

In accordance with the product modifications made with respect to successfully completing FCC Part-15 Testing of Lathem's new PC50 Time & Attendance Terminal at the facilities of Advance Compliance Solutions, Inc., the following statement of intent is provided.

All modifications made to the PC50 product that were "in place" during the successful testing procedure will be included in the final production assemblies of this new product. Specifically, this includes the addition of a Ferrite Torroid ( Steward 28A2736-0A0) clamped around the product's USB Cable, near the Terminal end. [The test was performed with Steward 28A2736-0A2, but the last digit is being changed, in production, to reflect the use of a Ferrite with a white plastic cover, rather than black.]

This component has been added to our assembly specification and top-level BOM, for the packaging of our product for retail shipping.

Sincerely yours,

A handwritten signature in black ink that reads "Ellery W. Potash".

Ellery W. Potash, Sr. Engineer  
LATHEM TIME CORP.
