Test Methodology:	Measurements performed according to the procedures in ANSI C63.10-2013

1.2 EUT Configuration

The equipment under test was operated during the measurement under the following conditions:

- □ Standby
- ☑ Continuous
- Continuous un-modulated
- □ Test program (customer specific)
- ⊠ Below

Operating modes of the EUT:

No.	Description
1	The transmitter was set to transmit continuously.

Cables:

No.	Туре	Length	Designation	Note
1	Communication cable	>1m	Reader cable, not shielded	

Support equipment/Services:

No.	Item	Description
1	Paxton Access Net 2 plus	Door access control unit

General notes: The EUT is transmitter only and has no receiver portion.

1.3 Environmental conditions

During the measurement the environmental conditions were within the listed ranges:

\boxtimes	Normal
-------------	--------

Temperature:	15-35 ° C
Humidity:	30-60 %
Atmospheric pressure:	86-106 kPa

1.4 Measurement uncertainty

The expanded uncertainty (k = 2) for radiated emissions from 30 to 1000 MHz has been determined to be: ± 4 dB at 10m and ± 5.4 dB at 3m

The expanded uncertainty (k = 2) for conducted emissions from 150 kHz to 30 MHz has been determined to be:

±2.6 dB

1.5 Field Strength Calculation

The field strength is calculated by adding the Antenna Factor and Cable Factor, and subtracting the Amplifier Gain (if any) from the measured emissions reading on the EMI Receiver. The basic equation with a sample calculation is as follows:

FS = RA + AF + CF - AG

Where: FS = Field Strength in $dB(\mu V/m)$ RA = Receiver Amplitude in $dB(\mu V)$ CF = Cable Attenuation Factor in dB AF = Antenna Factor in $dB(m^{-1})$ AG = Amplifier Gain in dB

Assume a receiver reading of 48.1 dB(μ V) is obtained. The antenna factor of 7.4 dB(m⁻¹) and cable factor of 1.6 dB is added and amplifier gain of 16.0 dB is subtracted giving field strength of 41.1 dB(μ V/m).

 $\begin{array}{l} \mathsf{RA} = 48.1 \ \mathsf{dB}(\mu\mathsf{V}) \\ \mathsf{AF} = 7.4 \ \mathsf{dB}(\mathsf{m}^{-1}) \\ \mathsf{CF} = 1.6 \ \mathsf{dB} \\ \mathsf{AG} = 16.0 \ \mathsf{dB} \\ \mathsf{FS} = \mathsf{RA} + \mathsf{AF} + \mathsf{CF} - \mathsf{AG} \\ \mathsf{FS} = 48.1 + 7.4 + 1.6 - 16.0 \\ \mathsf{FS} = 41.1 \ \mathsf{dB}(\mu\mathsf{V}/\mathsf{m}) \end{array}$
