**Family Application Letter**

IC ID: **10217A-337620**

We, Paxton Access Ltd, are applying for Canadian type approval assessment and new family certification for Radio Equipment of the models: 337-600, 337-610 and 337-620 against IC: 10217A-337620.

The new products qualify for family approval as they share the same electronic hardware. The mechanical hardware is identical with the exception of the back box they fit into for mounting purposes

One variant has been selected for IC testing and certification under one ID number. This variant is seen as the worst case in terms of the EMC emissions and so was chosen for all of the testing

The justification is it represents the standard configuration and will consequently be the top selling variant

Yours Sincerely,

*B. D. Glass*
