### 1. JOB DESCRIPTION

**Equipment:** Net2 Handsfree Access Control System

**Equipment Model No(s):** Equipment under Test

Net2 Hands free interface – 477 – 222 – US Net2 Hands free keyfob - 690 – 222 – US Net2 Hands free keycard – 690 – 333 – US

**Support Equipment** 

Net2 RS 845 Comms Converter - 455-477-US

Net2 Door ACU – 385-527-US Exit Button E50 – 356-310-US

Proximity P200 reader - 323-110-US

12V psu -998-241-US

Laptop running Net2 software

Equipment Serial No: None

Phase: Compliance

Customer: Paxton Access Ltd

Test Plan Reference: -

**Test Standards:** CFR47 Part 15: 207,209 and 249

Test Location: Intertek ETL Semko

Unit D Randalls Way

Leatherhead

Surrey KT22 7SB

**Test Work Started:** 5<sup>th</sup> March 2007

**Test Work Completed:** 9<sup>th</sup> March 2007

### 2. TEST SUMMARY

### PRODUCT REFERENCE STANDARDS

### ANSI C63.4-2003,

TEST STANDARD	TEST	COMMENT
CFR 47 Part 15:207	Conducted Emissions	Pass-Note
CFR 47 Part 15:209 and 249	Radiated Emissions	Pass

Note: The Conducted Emissions Test results are below the specification limit by a margin less than the measurement uncertainty; it is therefore not possible to state compliance based on the 95% level of confidence. However, the result indicates that compliance is more probable than non-compliance with the specification limit.

# 3. EQUIPMENT UNDER TEST (EUT)

### 3.1. Description of the EUT

The Net2 Handsfree Access control system testboard is a representation of a single door Paxton Access PC based access control system, known as Net2 Handsfree. The system allows the user to gain access to their premises without the need to present a token to a reader. The system comprises of an active keyfob or Keycard(transponder) which can be carried somewhere on your person and an interface (transceiver) to computer software Net2.

The system was mounted on a wooden board and was tested as received.

### 3.2. EUT's Modes of Operation

System active, Communicating and standby.

# 3.3. EUT Configuration Diagram

See photographs in Annex 3

# 3.4. EUT Support Equipment

The Net2 Handsfree Access control system was monitored for functionality using the client software "Net2". Also used was the RS232/485 comms converter to provide the connection back to the PC/Software

### 3.5. Cables Associated With the EUT

EUT PORT	TYPE	LENGTH (m)	TERMINATION/LOAD
Net2 ACU	10 core	2	Net2 Handsfree Interface
Reader input	10 Core	2	Net2 Handsfree Interface
Net2 ACU	5 Core	1	RS232 Comms Converter
Laptop	9	3	RS232 Comms Converter
AC Mains	2	1	Net2 ACU

7 of 45 Page: Product: Net2 Handsfree Access Control Issue Date: May 2007

system

Issue No.: Model No.: As page 3 2

### 4. CONDUCTED EMISSIONS

### 4.1. Conducted Emissions Test Method

The testing was performed in accordance with ANSI C63.4-2003.

The test was performed in a screened room using a Line Impedance Stabilising Network (LISN).

### 4.2. Conducted Emissions Test Results

Any measurements within 10dB below the average and quasi-peak limit lines are measured with the average and quasi-peak detectors respectively. The results for the Net2 Handsfree Access control system testboard and the Keyfob communicating are given in Tables 1 – 2 and Graphs 1 – 2, the results for the Keycard communicating are given in Tables 3 - 4 and Graphs 3 - 4. The test results for the Net2 Handsfree Access control system testboard in standby mode are given in Table 5 and Graph 5.

# 4.3. Modification Performed During Testing

None

### 4.4. Conducted Emissions Conclusions

The EUT results are below the specification limit by a margin less than the measurement uncertainty; it is therefore not possible to state compliance based on the 95% level of confidence. However, the result indicates that compliance is more probable than non-compliance with the FCC Part 15:207 specification limit.

# 4.5. Measurement Uncertainty

150kHz to 30MHz  $\pm$  2.9 dB

The measurement uncertainties have been determined at a confidence level of not less than 95%.

### 5. RADIATED EMISSIONS

### 5.1. Radiated Emissions Test Method

The testing was performed in accordance with ANSI C63.4-2003.

The testing was carried out in a fully lined anechoic chamber, with the limit line at 10m distance for adjusted for a 3m test site. The limit line was also lowered by 6dB to give worst case conditions(the test site being fixed and unable to maximise signal levels).

The Intentional radiated field strengths are tabulated in Table 6 and the 6dB bandwidths in table 7. The plots are shown in Annex 1

#### 5.2. **Unintentional Radiated Emissions Test Results**

The radiated emissions from 30 to 1000MHz were measured using a quasi-peak detector. Measurements above 1000MHz were measured using average and peak detectors.

The results for the frequency range 30 to 1000MHz for Net2Handsfree interface system communicating with the Keyfob are given in Table 8 and Graph 6 and for the keycard communicating, Table 9 and Graph 7. The test results for the Net2Handsfree interface system in standby mode are given in Table 10 and Graph 8.

The results for frequencies above 1000MHz are tabulated and shown in Table 11.

# 5.3. Modifications Performed During Testing

None.

#### 5.4. Radiated Emissions Conclusions

The intentional radiated field strengths complied with CFR47 Part15:249.

The non intentional radiated emissions complied with CFR47 Part15:209 for the Net2Handsfree Access control system communicating with the Keyfob.

The non intentional radiated emissions complied with CFR47 Part15:209 for the Net2Handsfree Access control system communicating with the keycard.

# 5.5. Measurement Uncertainty

30MHz to 1000MHz ±3.3dB

The measurement uncertainties have been determined at a confidence level of not less than 95%.
