

### 3.1.11 Radio frequency radiation exposure, FCC 15.319 (i); RSS-102

UPCS devices are subject to the radio frequency radiation exposure requirements specified in FCC parts 1.1307 (b), 2.1091, 2.1093 and RSS-102, as appropriate. All equipment shall be considered to operate in a “general population / uncontrolled environment. For portable devices tests according to IEEE 1528 are requested, if applicable.

Consideration of radio frequency radiation exposure for EUT is done as

|                          |                                     |
|--------------------------|-------------------------------------|
| SAR test acc. IEEE 1528  | <input type="checkbox"/>            |
| MPE calculation as below | <input checked="" type="checkbox"/> |

SAR test results: not applicable

MPE calculation:

Please find radiated power test results in Appendix J.

The EUT is considered as a mobile device according to OET Bulletin 65, Edition – 97 – 01. Therefore distance to human body of min. 20 cm is determined.

The internal / external antennas used for this mobile transmitter must provide a separation distance of at least 20 cm from all persons and must not be co-located or operating in conjunction with any other antenna or transmitter.

A safety statement concerning minimum separation distances from enclosure of the device will be integrated in the user’s manual to provide end-users with transmitter operating conditions for satisfying RFE exposure compliance.

Formula:

$$S = \text{EIRP} / 4\pi R^2$$

Calculation:

|      |                                     |        |
|------|-------------------------------------|--------|
| EIRP | Radiated Power [dBm]                | 23.31  |
| EIRP | Radiated Power [mW]                 | 214.30 |
| R    | Distance [cm]                       | 20     |
| S    | Power Density [mW/cm <sup>2</sup> ] | 0.042  |

Limit:

The limit of Power density for General Population / Uncontrolled Exposure is 1.0 mW/cm<sup>2</sup>. Compliance with the requirements will be considered by calculation of power density derived from radiated power value.

Verdict:

|                                     |                          |
|-------------------------------------|--------------------------|
| Pass                                | Fail                     |
| <input checked="" type="checkbox"/> | <input type="checkbox"/> |

For radiated power test results see Appendix I.
