Model No.:	FC-725
Power supply:	DC 3.6V
Test Sample Condition:	The test samples were provided in good working order with no visible defects.

### 4.3 Test Mode and test samples plans

Operating mode	Detail description
Working mode	Keep the EUT in working mode
The sample was placed 0.8m above the ground plane of 3m chamber. Measurements in both horizontal and vertical polarities were performed. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables, rotating the turntable, varying antenna height from 1m to 4m in both horizontal and vertical polarizations. The emissions worst-case are shown in Test Results of the following pages.

## 5 Measurement setup and procedure

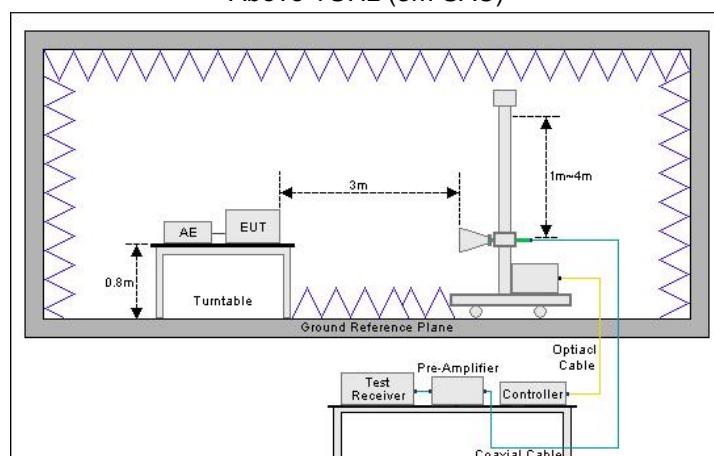

### 5.1 Test setup

#### 1) Radiated emission measurement:

Below 1GHz (10m SAC)

Above 1GHz (3m SAC)

## 5.2 Test procedure

Test method	Test step
Conducted emission	<ol style="list-style-type: none"> <li>The E.U.T and simulators are connected to the main power through a line impedance stabilization network (L.I.S.N.). This provides a 50ohm/50uH coupling impedance for the measuring equipment.</li> <li>The peripheral devices are also connected to the main power through a LISN that provides a 50ohm/50uH coupling impedance with 50ohm termination. (Please refer to the block diagram of the test setup and photographs).</li> <li>Both sides of A.C. line are checked for maximum conducted interference. In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.4 on conducted measurement.</li> </ol>
