1 General Information

1.1 General Description

The equipment under test (EUT) is a transmitter for Walkie Talkie 80m (260 FEET). It operates at 49.860MHz which is controlled by a crystal. The EUT is powered by 1 x 9V size battery. There are single switch to select transmit or receive voice signal. When the switch is pressed once, it will transmit voice signal to receiver.

The brief circuit description is listed as follows:

- Q1, Y1 and associated circuit act as Tx / Rx RF circuit.
- VR1 and associated circuit act as volume and on/off switch.
- Q2-Q4 and associated circuit act as audio amplify.

TEST REPORT

2 Description of the radiated emission test

2.1 Test Procedure

Radiated emissions measurements are investigated and taken pursuant to the procedures of ANSI C63.4 – 2003.

The equipment under test (EUT) was placed on a non-conductive turntable with dimensions of 1.5m x 1m and 0.8m high above the ground. 3m from the EUT, a broadband antenna mounting on the mast received the signal strength. The turntable was rotated to maximize the emission level. The antenna was then moving along the mast from 1m up to 4m until no more higher value was found. Both horizontal and vertical polarization of the antenna were placed and investigated.

For below 30MHz, a loop antenna with its vertical plane is placed 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1 m above the ground.

The device was rotated through three orthogonal axes to determine which attitude and configuration produce the highest emission during measurement.

2.2 Test Result

Peak Detector data was measured unless otherwise stated.

Emissions appearing within the restricted bands shall follow the requirement of section 15.205.

It was found that the EUT meet the FCC requirement.
