Re: Limited Modular Approval for ReconRobotics Payload Module
FCC ID: UYXRSK2020-02

The Payload Module is under evaluation for limited modular approval with FCC ID:UYXRSK2020-02. This module is intended for use in ReconRobotics products only. It is soldered to a motherboard and factory calibrated at time of manufacturing. It does not contain any user accessible components or software interface where a user could modify its performance. It is therefore unnecessary to develop an installation manual for this device. All relevant information is instead provided by the Theory of Operation.

Sincerely,

Andrew Drenner
Chief Technology Officer
