Atlanta, GA 30324

Job number: 798UC8 Equipment: FCC ID: V2U-WMR300 FCC Rules: Part 15.247

Gentlemen:

Below please find copy of the request for additional information for Job 798UC8.

Based upon our review of this application we have the following questions:

The output power from this module is 584.4 Milli-Watts. Please remember that when you add antennas with gain greater than 6dBi, the output power from the module must be reduced accordingly. Also, for 900 MHz transmitters, you do not have the luxury of the 1 dB for every 3dB that the directional gain of the antenna exceeds 6 dBi.

The FCC Form 731 does not state in Item 8 that this application is for Modular Approval. (Or limited modular approval as the case may be).

The User Manual must address the antenna issues along with a power level to comply with the rules. This is not clear in the User Manual.

Response

1. The output power requirements have been addressed in the user manual. Please reference file UserMan WMR300.pdf.
2. The 731 form has been corrected to reflect limited modular approval.
3. The output power and antenna requirements have been addressed in the user manual. Please reference file UserMan WMR300.pdf.

The response to your request has been uploaded to your site. Please review the information and continue with the grant of certification process.

Should you require any further information, please contact the undersigned.

Thank you for your consideration in this matter.

Sincerely,

A handwritten signature in cursive script that reads "Scot D. Rogers".
