

This digital photo frame uses 12V/1.5A power adaptor which inputs power into AOM7080. One of the input stream is converted into 5V to power digital LCD. One of the input stream emit through 1117 to convert into 1.2V and another emit through 1117-3.3 to convert into 3.3V to supply power for main IC chip AM7213D. This main IC chip enable speaker to work by sending signals through APM2068. The chip can directly control flash, nand flash, 4in1 card, USB slot, RTC, function control button. Flash frequency is 10MHz. Clock Frequency is 27MHz.

EUT port: DC input port, SD card port, CF card port, USB port and mini-USB port.

Operation mode: Play music and photo in the memory, Reading USB, CF and SD card. And connected to PC for data transport.

Power supply: DC12V
