

The Digital photo frame by A power, DC1.5A, 5V/power input one YB1517 for Digital LCD backlit by using part, through 1117-1.8 convert 1.8 V and through 1117-3.3 convert 3.3 voltage supply main IC AM7213D use, and then the LM4863MET through both drive IC, main IC directly control NAND Flash and four in one Card, also can control RTC and work and A USB port control key control. CLOCK frequency 24MHz.

EUT port: DC input port, SD card port, USB port and mini-USB port.

Operation mode: Play music and photo in the memory, Reading USB, SD card. And connected to PC for data transport.

Power supply: DC5V
