AP699E8N.8U31H-4 Product Specifications

Introduction

The AP699E8N.8U31H-4 is a wireless area network (WLAN) access point (AP). It provides high access to the Internet, downstream up to 150 Mbps and upstream up to 150 Mbps. Utilizing 802.11 b/g/n wireless technology, the computers and devices with WiFi functionality can wirelessly connect to the AP699E8N.8U31H-4 and share high speed Internet connection. The AP699E8N.8U31H-4 supports DHCP client and DHCP server. It also supports NAT and NAPT functions. As a DHCP client, it can dynamically obtain external Internet IP address. As a DHCP server, it can dynamically assign local IP address to the associated wireless stations and wired LAN port PCs. NAT and NAPT functions implement local IP address and external IP address conversion.

The AP699E8N.8U31H-4 is an ideal wireless broadband solution for both home users who wish to share high-speed wireless Internet access and small offices which wish to do business on the Internet.

Application

- Home and SoHo wireless gateway
- = Small enterprise
- = TV over IP (IPTV)
- = Voice over IP (VoIP)
- = Higher data rate broadband sharing
- Broadband Internet access sharing
- Audio and video streaming and transfer
- = PC file and application sharing
- = Network and online gaming
