Dear Mr. Noble

1. A device iLane, model # ILN7100ABE has been designed for use inside the vehicles to provide hands-free communication between smart cellular devices and the driver. The device uses Bluetooth wireless technology to connect to the smart phone on one side and the hands-free BT device on the other side. The device can help establish telephone call as well as reads emails and can send response to the other party.
2. FCC certification for the device is required due to Bluetooth radio embedded inside the device. The Bluetooth radio has been assembled using radio ICs from CSR (Cambridge Silicon Radio, Cambridge, UK). The device has been tested at Cetecom Inc, Milpitas, CA, according to 15.247 rules of the FCC and complies with the rules, with class-B emission rating.
3. The device will be installed inside the vehicle using a small bracket (optional) near the driver seat, and usually will not move.

Thank you and best regards,

A handwritten signature in black ink, appearing to read "Inam Rahim", with a long horizontal stroke extending to the right.

Inam Rahim
Sr. H/W Developer
