Subject: Models Differences Declaration

We hereby request the following models listed under IC: 11014A-DHR001 and FCC ID: V5FDHR001

DHR804  
DHR805  
DHR808

We declare that these models are electrically, technically the same. The difference in these models are the following:

1. DHR804, DHR805, and DHR808 are based on the KS31 repeater board which additionally has the different BoM's (example. Circulators, filtering, BW filters, matching components (prior and after amps., blenders, filters etc...) depending on the frequency. The bare board remains the same.
2. PA's for DHR804, DHR805, and DHR808 are based on the KS28 board which also might have a slightly different BoM depending on the frequency band example matching caps on in/out ports of the pre and main transistor for example(input/output reflection also for example). And any tuning changes needed due to frequency.

Sincerely,

  
Amy L Sanvido
