## FCC §15.247 (i) & §1.1307 (b) (1) & §2.1091- MAXIMUM PERMISSIBLE EXPOSURE (MPE)

## **Applicable Standard**

According to subpart 15.247 (i) and subpart 1.1307 (b)(1), 2.1091 systems operating under the provisions of this section shall be operated in a manner that ensures the public is not exposed to RF energy level in excess of the communication guidelines.

Limits for General Population/Uncontrolled Exposure

Report No.: RSZ131225007-00C

| Limits for General Population/Uncontrolled Exposure |                                     |                                     |                                     |                                |  |  |  |  |  |
|---|-------------------------------------|-------------------------------------|-------------------------------------|--------------------------------|--|--|--|--|--|

| 0.3-1.34  | 614                                 | 1.63                                | *(100)                              | 30                             |  |  |  |  |  |
| 1.34-30   | 824/f                               | 2.19/f                              | $*(180/f^2)$                        | 30                             |  |  |  |  |  |
| 30-300  | 27.5                                | 0.073                               | 0.2                                 | 30                             |  |  |  |  |  |
| 300-1500  | /                                   | /                                   | f/1500                              | 30                             |  |  |  |  |  |
| 1500-100,000  | /                                   | /                                   | 1.0                                 | 30                             |  |  |  |  |  |

f = frequency in MHz

## **MPE Calculation**

Predication of MPE limit at a given distance

 $S = PG/4\pi R^2$ 

## Where:

S = power density (in appropriate units, e.g. mW/cm<sup>2</sup>)

P = power input to the antenna (in appropriate units, e.g., mW).

G = power gain of the antenna in the direction of interest relative to an isotropic radiator, the power gain factor, is normally *numeric* gain.

R = distance to the center of radiation of the antenna (appropriate units, e.g., cm)

| Frequency | Antenna Gain |           | <b>Conducted Power</b> |         | Evaluation<br>Distance | Power<br>Density      | MPE Limit             |
|-----------|--------------|-----------|------------------------|---------|------------------------|-----------------------|-----------------------|
| (MHz)     | (dBi)        | (numeric) | (dBm)                  | (mW)    | (cm)                   | (mW/cm <sup>2</sup> ) | (mW/cm <sup>2</sup> ) |
| 848.8     | 0            | 1.00      | 32.55                  | 1798.87 | 20                     | 0.36                  | 0.56                  |
| 1909.8    | -1           | 0.79      | 28.96                  | 787.05  | 20                     | 0.12                  | 1.00                  |

Note: To comply with FCC RF exposure compliance requirements, a separation distance of at least 20 cm must be maintained between the antenna of this device and all persons.

**Result: Compliance**
