## **Declaration – MIF for HAC RF Interference Evaluation**

To whom it may concern:

This device, with FCC ID: **V65E4610**, has been tested to, and will be certified to, the Hearing Aid Compatibility Requirement per **ANSI C63.19-2011 version per Part 20.19**.

The M rating was determined by measuring the maximum steady state average E-field values in dB (V/m) as documented in the HAC report and adding the MIF value in dB (V/m) using pre-determined values provided by Speag, 10021 DAC (16.11.2016), 10011 CAB (16.01.2014), 10081 CAB (16.01.2014), 10295 AAB (16.01.2014), 10170 CAC (16.11.2016), 10061 CAB (26.11.2014), 10077 CAB (26.11.2014), 10069 CAB (26.11.2014).

The Speag-reference documentation for supporting the pre-determined MIF value is Schmid & Partner Engineering AG, **UID SUMMARY (Communication Systems for Calibration, Issued Date 2016/11/16)**.

We confirm that the Speag simulation provided represents all the air interface modes applicable for a HAC rating for this handset.

Sincerely,

---

Douglas Dunn
