OMA521 Family cover letter:

Sagem Security acknowledges the “OMA520” is a downgrade product of the “OMA521” family.

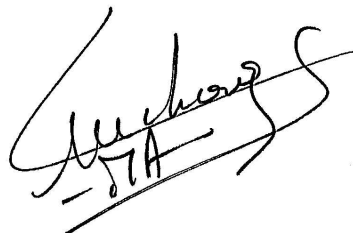

The downgrade products of a family have all the same electronic boards but without some hardware functions compared to the top version.

The FCC ID (V7AOMA521) and the IC number (2599I-OMA521) are still the same for all this family.

For **OMA521** Family:

- “OMA521” is the main product with full functionalities.
- “OMA520” is the same as “OMA521” but without the false finger detection module:
 - o Some electronic components are not soldered (cf. *OMA520_Part1st.pdf* and *OMA520_Internal_images.pdf* compared to *OMA21_Part1st.pdf* and *OMA521_Internal_images.pdf*).
 - o Prism material: PMMA for MA520 and Glass for MA521
 - o No false finger Flex cable for MA520

Sincerely,

Michel Cruchaga
Design Engineer
Eragny, SAGEM Security
