Description:	RFID Reader with detachable antenna and Profibus interface. For connecting the antenna a special plug is provided. The reader is merchandised without a power supply and is arranged for DC-supply.
Voltage supply:	9-30VDC
Frequency list:	Fundamental Frequency 125kHz ±1kHz Crystal frequencies: 16 MHz; 48MHz
Temperature range:	xx
Size:	Approximately 90x58x37 mm (LxWxH)

Test - / Measurement procedure

Measurements are made with a receiver according CISPR guidelines. The required frequency range is scanned in an automatically operation. If the emanation is closer than 6dB to the limits or more, the receiver will stop and measure the exact value with quasipeak or average detector. The frequency, the maximum reading and the limit will be printed out.

Test - / Measurement procedure

The test was performed at an antenna to EUT distance of 10m. Measurements were made with a CISPR receiver with quasi-peak. The average detector is used in the frequency bands 9-90kHz, 110-490kHz and above 1000MHz. For pulse modulated devices with a pulse repetition frequency of 20Hz or less, peak detector is used (15.35a Note). The frequency, the measured value, antenna information and the limit will be printed out. At frequencies below 30MHz, measurements may be performed at a distance other than what is specified in the regulation. The results were extrapolated to the specified distance by using the square of an inverse linear distance extrapolation factor (40dB/decade). For intentional radiators the supply voltage range is varied between 85% and 115% of the nominal rated voltage.

Test - / Measurement procedure

The test was performed at an antenna to EUT distance of 10m. Measurements were made with a CISPR receiver with quasi-peak. The average detector is used in the frequency bands 9-90kHz, 110-490kHz and above 1000MHz. For pulse modulated devices with a pulse repetition frequency of 20Hz or less, peak detector is used (15.35a Note). The frequency, the measured value, antenna information and the limit will be printed out.

Test result

Limits for radiated disturbances:
☒ kept
☐ not kept

Remarks: Radio disturbances below the limit line with a margin >10dB to the limit are generally not listed.
