

Tivoli Networks Cover letter

We will be manufacturing a Network radio that allows access to the internet without a computer

The Frontier Silicon Venice 6 module which we buy from Frontier takes care of accessing the Internet either wireless or wired via an Ethernet interface IC and gives us analog audio output

The wireless transmitter/receiver are onboard including the wifi antenna

Spread spectrum and power control are controlled by a program in the flash memory of the module

The keypad, display and Infrared remote all interface directly

Tivoli builds the surrounding electronics and power supply

The EMC compliance of the module is covered in a test report supplied by Frontier

Unintentional radiation of a complete Networks radio is being tested by Neutron Lab and a report will be available soon
