1 Summary

This assessment is based on calculations according to OET Bulletin 65 (97-01) and C95.3 (2002) to demonstrate the compliance with the basic restrictions related to general public exposure to radio frequency electromagnetic fields with respect to FCC 47 CFR § 1.1310 and RSS-102.

Flexi Zone Micro small cell, Omni configuration (1) consists of a Blue Tooth (BT) antenna (Laird WXC2400SMRP-NS1) and two LTE Omni-directional antennas (PCTEL MHO80617102NM). Details of the configuration are given in section 4.

Flexi Zone Micro small cell, Omni configuration (1) is compliant with the cited standards at every point outside a distance R to the antenna.

4 Equipment Under Assessment (EUA)

- The EUA is a multi antenna configuration with a Blue Tooth (BT) antenna and two LTE Omni-directional antennas. The GPS Antenna was not part of the assessment because only the transmitting parts are relevant.

5 Evaluation of the EUA

5.1 Calculation

The calculation is based on OET Bulletin 65 (97-01) Section 2: Prediction Methods.

The equations for the truly worst-case prediction of power density[1] is applied. It takes into account a ground reflection of 100%. This is a worst – case prediction which overestimates the field strength in the near-filed. It covers also the conditions of C95.3 Annex B.2

$$S = \frac{(2)^2 PG}{4\pi R^2} = \frac{PG}{\pi R^2} = \frac{EIRP}{\pi R^2}$$ Eq (1)[3]

S = power density [W/m^2]

P = power input to the antenna [W]

G = power gain of the antenna in the direction of interest relative to an isotropic radiator

R = distance to the center of radiation of the antenna [m]

Far field condition

R_{ff} = 0.6*D^2/λ

D: Maximum dimension of the antenna
λ: Wavelength
