### Government Disclaimer Notice

When government drawing, specification, or other data are used for any purpose other than in connection with a definitely related government procurement operation, the United States Government thereby incurs no responsibility nor any obligation whatsoever; and the fact that the Government may have formulated, furnished, or in any way supplied the said drawing, specifications, or other data, is not to be regarded by implication or otherwise in any manner licensing the holder or any other person or corporation, or conveying any rights or permission to manufacture, use, or sell patented invention that may in any way be related thereto. This report must not be used to claim product endorsement by NVLAP or any agency of the U.S. Government.

#### Reproduction Clause

Any reproduction of this document must be done in full. No single part of this document may be reproduced without permission from ECMG Electronic Technical Testing Corp (Shenzhen).

#### **Opinions and Interpretations**

This test report relates to the abovementioned equipment under test (EUT).Without the permission of ECMG Electronic Technical Testing Corp (Shenzhen). Test Lab this test report is not permitted to be duplicated in extracts. This test report does not entitle to carry any test mark on this or similar products. The manufacturer has sole responsibility of continued compliance of the device.

#### Statement of Measurement Uncertainty

The data and results referenced in the document are true and accurate. The reader is cautioned that there may be errors within the calibration limits of the equipment and facilities that can account for a nominal measurement error. Furthermore, component and process variability of devices similar to that tested may result in additional deviation.

#### EUT Description

*Guangdong Midea Microwave and Electrical Appliances Manufacturing Co.,Ltd., model tested EM245AGP–P1 (referred to as the EUT in this report) is a Microwave Oven.* 

| The technical specif | fications of EUT | Tare as below: |
|----------------------|------------------|----------------|
|----------------------|------------------|----------------|

| Power Supply                   | 120V AC/60Hz              |
|--------------------------------|---------------------------|
| Rated Input Power (Microwave)  | 1600W                     |
| Rated Output Power (Microwave) | 1200W                     |
| Frequency                      | 2450 MHz(Class B/Group 2) |
| Magnetron Model                | 2M248J                    |
| Magnetron Manufacturer         | TOSHIBA                   |

*NOTE: For more detailed information or features please refer to user's manual of EUT.* 

#### EUT Model Derived

XM245AYY-P1 model designations as follow:

X=E or A;

E/A = Electronic Controller (E: Film type keypad, A: Button type keypad)FCC Test Report #: GUA-1308-11036-FCCPrepared for Guangdong Midea Microwave and Electrical Appliances Manufacturing Co.,LtdPrepared by ECMG Electronic Technical Testing Corp (Shenzhen).Page 4 of 35

M: indicate microwave function;

245: "2" indicate the microwave output power is 1200W, "45" indicate cavity capacity is 45 liters;

D: indicate the design No.;

*YY*= 0-9 or A-Z, indicate different appearance;

P1:Painted cavity.

Model EM245AGP-P1 was selected for the final testing.

#### Test Summary

The electromagnetic compatibility requirements on model EM245AGP-P1 for this test are stated below. all results listed in this report relate exclusively to this above-mentioned model as the equipment under test. this report confers no approval or endorsement upon any other component, host or subsystem used in the test set-up.

#### Load for Microwave Oven

For all measurements the energy developed by the oven was absorbed by a dummy load consisting of a quantity of tag water in a beaker. If the oven was provided with a shelf or other utensil support, this support was in its initial normal position. For ovens rated at 1000watts or less power output, the beaker contained quantities of water as listed in the following subparagraphs. For ovens rated at more than 1000watts output, each quantity was increased by 50% for each 500watts or fraction thereof in excess of 1000 watts. Additional beakers were used if necessary.

- -Load for power output measurement: 1000 milliliters of water in the beaker located in the center of the oven.
- -Load for frequency measurement: 1000 milliliters of water in the beaker located in the center of the oven.
- -Load for measurement of radiation on second and third harmonic: Two loads, one of 700 and the other of 300 milliliters, of water are used. Each load is tested both with the beaker located in the center of the oven and with it in the right front corner.
- -Load for all other measurements: 700 milliliters of water, with the beaker located in the center of the oven.
- *Note:* Since rated output power of the EUT is 1200 watts, so the following load water quantity shall apply:
- -Load for power output measurement: 1200 milliliters of water in the beaker located in the center of the oven.
- -Load for frequency measurement: 1200 milliliters of water in the beaker located in the center of the oven.

-Load for measurement of radiation on second and third harmonic: Two loads, one of 840 and the other of 360 milliliters, of water are used. Each load is tested both with the beaker located in the center of the oven and with it in the right front corner.

-Load for all other measurements: 840 milliliters of water, with the beaker located in the center of the oven.

EUT Exercise Software

No test sofware support this test.

Equipment Modification

Any modifications installed previous to testing by Guangdong Midea Microwave and Electrical Appliances Manufacturing Co.,Ltd. will be incorporated in each production model sold or leased in United States.

There were no modifications installed by ECMG Electronic Technical Testing Corp (Shenzhen) test personnel.

| TEMPERATURE:                 | 22°C   | HUMIDITY:        | 51%                          |  |
| ATM PRESSURE:                | 103kPa   | GROUNDING:       | Through AC Power Cord        |  |
| TESTED BY:                   | Sewen Guo  | DATE OF TEST:    | August 6 <sup>th</sup> ,2013 |  |
| TEST REFERENCE:              | ANSI C63.4-2009, FCC/OST MP-   | 5:1986           |                              |  |
| TEST PROCEDURE:              | <b>CCEDURE:</b> The EUT was set-up according to the FCC MP-5 and FCC Part 18 for Radiation Haza Measurement. The measurement was using a microwave leakage meter to measure to Radiation leakage in the as-received condition with the oven door closed. A 840ml was load in a beaker was located in the center of the oven and the Microwave Oven was sto maximum power. While the oven operating, the microwavemeter will check the leakage and then record the maximum leakage. |                  |                              |  |
| TESTED RANGE:                | N/A  |                  |                              |  |
| TEST VOLTAGE:                | AC 120V/60Hz   |                  |                              |  |
| RESULTS:                     | There was no microwave leakage exceeding a power level of 0.18 mW/cm <sup>2</sup> observed at any point 5cm or more from the external surface of the oven. A maximum of 1.0 mW/ cm <sup>2</sup> is allowed in accordance with the applicable FCC standards. Hence, microwave leakage in the as-received condition with the oven door closed was below the maximum allowed. The test results relate only to the equipment under test provided by client.                            |                  |                              |  |

| TEST REFERENCE:              | ANSI C63.4-2009, FCC/OST MP-5:1986  |                  |                              |  |  |
| TEST PROCEDURE:              | The EUT was set up according to the FCC MP-5 and FCC Part 18 for input power measurement. The input power and current was measured using a power analyzer. A 840ml water load in a beaker was located in the center of the oven and the Microwave Oven was set to maximum power. While the oven is operating, use a voltmeter and an ampmeter to test the AC input voltage and current. |                  |                              |  |  |
| TESTED RANGE:                | N/A   |                  |                              |  |  |
| TEST VOLTAGE:                | 120VAC / 60Hz   |                  |                              |  |  |
| RESULTS :                    | Based on the measured input power, the EUT was found to be operating within the intended specifications. The test results relate only to the equipment under test provided by client.   |                  |                              |  |  |

| TEST PROCEDURE:              | <ul> <li>The EUT was set up according to the FCC MP-5 and FCC Part 18 for Operating Frequency Measurement.</li> <li>1) The variation of frequency with time. The operating frequency was measured using a spectrum analyzer. Starting with the EUT at room temperature, a 1200ml water load in a beaker was located in the center of the oven. Set a spectrum analyzer with antenna at 3 meters distance form the oven and the oven was operated at maximum output power. The fundamental operating frequency was monitored until the water load was reduced to 20 percent of the original load.</li> <li>2) The variation of frequency with Line Voltage. The operating frequency was measured using a spectrum analyzer. The EUT was operated/warmed by at least 10 minutes of use with a 1200ml water load at room temperature at the beginning of the test. Then the operating frequency was monitored as the input voltage was varied between 80 and 125 percent of the nominal rating.</li> </ul> |                  |                              |  |  |  |
| TESTED RANGE:                | 2450 ± 50MHz  |                  |                              |  |  |  |
| TEST VOLTAGE:                | 120VAC / 60Hz   |                  |                              |  |  |  |
| RESULTS:                     | Please refer to following pages for details of the variation in operating frequency with time & line voltage measurement. The test results relate only to the equipment under test provided by client.  |                  |                              |  |  |  |
| CHANGES OR<br>MODIFICATIONS: | There were no modifications installed by ECMG Electronic Technical Testing Corp (Shenzhen) test personnel.  |                  |                              |  |  |  |
| M. UNCERTAINTY:              | Freq. ±10kHz  |                  |                              |  |  |  |

#### Variation in Operating Frequency with Time:

| Minimum Frequency (MHz) | Maximum Frequency (MHz) |
|-------------------------|-------------------------|
| 2448.8                  | 2449                    |

### Variation in Operating Frequency with Line Voltage:

| Minimum Frequency (MHz)                         | Maximum Frequency (MHz) |
|---|-------------------------|
| 2447.2  | 2448                    |
| Note: Line voltage varied from 96Vac to 150Vac. |                         |

| ATM PRESSURE:                | 103.0kPa   | GROUNDING:          | Through AC Power Cord        |  |  |
| TESTED BY:                   | Sewen Guo  | DATE OF TEST:       | August 9 <sup>th</sup> ,2013 |  |  |
| TEST REFERENCE:              | ANSI C63.4-2009, FCC/OST MP-5:1986   |                     |                              |  |  |
| TEST PROCEDURE:              | The EUT was set up according to the guidelines of ANSI C63.4-2009& FCC MP-5 for<br>radiated emissions. Microwave Oven was placed on a 1m *1.5m nonconductive<br>table. The top of the table is 1.0 m above the ground. The table is placed on a flush<br>mounted metal turntable. An EMI receiver peak scan was made at the frequency<br>measurement range (pre-scan) in an Anechoic chamber. Signal discrimination was<br>then performed and the significant peaks marked. All data was recorded in Quasi-<br>peak detection mode from 30 MHz to 1GHz and average detector mode above<br>1GHz.<br>The following data lists the significant emission frequencies, measured levels,<br>correction factors (including cable and antenna correction factors), and the corrected<br>readings against the limits. Explanation of the Correction Factor are given as follows:<br>FS= RA + AF + CF - AG<br>Where: FS = Field Strength<br>RA = Receiver Amplitude<br>AF = Antenna Factor<br>CF = Cable Attenuation Factor<br>AG = Amplifier Gain |                     |                              |  |  |
| TESTED RANGE:                | 30MHz to 18GHz   |                     |                              |  |  |
| TEST VOLTAGE:                | 120VAC / 60Hz  |                     |                              |  |  |
| RESULTS:                     | The EUT meet the requirements of test reference for radiated emissions. The test results relate only to the equipment under test provided by client.   |                     |                              |  |  |
| CHANGES OR<br>MODIFICATIONS: | There were no modifications installed by ECMG Electronic Technical Testing Corp (Shenzhen) test personnel.   |                     |                              |  |  |
| M. UNCERTAINTY:              | ± 3.2 dB   |                     |                              |  |  |

## Field strength limits for out-of-band emissions :

For RF output power <500W, Limit at 300m = 27.96dBuV/m

*For RF output power>500W, Limit at 300m=20log* 

[25\*SQRT(Power/500)]dBuV/m

#### Test Data :
