

## RF Exposure Analysis

### FCC §2.1093

Compliance with the SAR requirements is considered without testing because the RF power of channel is below SAR Test Exclusion Threshold. The SAR Test Exclusion Threshold (TET in mW) was calculated according to the KDB 447498, Sec 4.3.1.1 using formula:

$$\text{TET} = [(\text{max. power of channel, mW}) / (\text{min. separation, mm, d})] \times [\sqrt{f_{(\text{GHz})}}]$$

Where  $d = 9 \text{ mm}$  – the minimum test separation distance.

At  $f = 2.45 \text{ GHz}$ ,

$$\begin{aligned} \text{TET} &= [(0.413 \text{ mW}) / (9 \text{ mm})] \times [\sqrt{2.45_{(\text{GHz})}}] \\ &= 0.0718 \quad \leq 3.0 \text{ and } \leq 7.5 \end{aligned}$$

### Industry Canada RSS-102

With the EUT conducted power of 0.415 mW and EIRP power of 0.738 mW, compliance with the SAR requirements is considered without testing because the RF power of channel is below SAR exemption limits of 4 mW at 2.45 GHz and  $\leq 5 \text{ mm}$  separation.
