1 DOCUMENTATION

1.1 TEST REGULATION

FCC Rules and Regulations Part 74 Subpart H Low Power Auxiliary Stations

Test procedure :

RF power output, modulation characteristics, occupied bandwidth, field strength of spurious radiation and frequency stability tests were performed according to the procedures in FCC Rules and Regulations Part 2.

1.2 GENERAL INFORMATION

1.2.1 Test facility :

- Test Facility located at EMC Engineering Dept. Testing Div. :
 No.2 and 3 Anechoic Chambers (3 meters Site).
 - No.2 and 3 Anechoic Chambers (3
 - Shielded Enclosure.
- 2) EMC Engineering Dept. Testing Div. is accredited under the National Voluntary Laboratory accreditation Program for satisfactory compliance established in title 15, Part 285 Code of Federal Regulations. NVLAP Lab Code : 200189-0 (Effective through : June 30, 2008)

1.2.2 Description of the Equipment Under Test (EUT) :

| 1) | Type of Equipment | : | Tour Mic(Transmitter) |
|-----|--|---|--------------------------------------|
| 2) | Product Type | : | Prototype |
| 3) | Category | : | Licensed Non-Broadcast Transmitter |
| | | | Worn On Body |
| 4) | EUT Authorization | : | Certification |
| 5) | FCC ID | : | VGWHEI-18Y |
| 6) | Trade Name | : | None |
| 7) | Model No. | : | HEI-18YT |
| 8) | Operating Frequency Range | : | 802.000 MHz - 803.800 MHz |
| 9) | Highest Frequency Used in the EUT | : | 803.800 MHz |
| 10) | Necessary Bandwidth | : | 20 kHz (=2M+2D) |
| | | | (M: Maximum modulation = 3 kHz |
| | | | D: Peak frequency deviation = 7 kHz) |
| | * Peak frequency deviation is designed | d | by manufacturer. |
| 11) | RF Output Power | : | 8.5 mW (Manufacturer defined) |
| 12) | Emission Designator | : | 20KF3E |
| 13) | Serial No. | : | None |
| 14) | Date of Manufacture | : | None |
| 15) | Power Rating | : | DC 3.0V(Battery) |
| 16) | EUT Grounding | : | None |

1.2.3 Definitions for symbols used in this test report :

- <u>x</u> indicates that the listed condition, standard or equipment is applicable for this report.
- indicates that the listed condition, standard or equipment is not applicable for this report.

1.3 TEST CONDITION

1.3.1 The measurement of the RF power output the Radiated Emission(30 MHz - 1000 MHz)

 \underline{x} - was performed in the following test site.

- was not applicable.

Test location :

Safety & EMC Center EMC Engineering Dept. Testing Div. 21-25, Kinuta 1-chome, Setagaya-ku, Tokyo 157-8573, Japan

<u>x</u> - Anechoic Chamber A (3 meters) - Anechoic Chamber B (3 meters)

Validation of Site Attenuation :

Last Confirmed Date :March, 2007
 Interval :1 year

Used test instruments :

| Туре | Number of test instruments |
|------------------|----------------------------|
| | (Refer to Appendix) |
| Test Receiver | 11 |
| Cable | 38 |
| Antenna | 22, 24, 26, 28 |
| RF Amplifier | N/A |
| Signal Generator | 62 |
| Power Meter | 65 |
| Power Sensor | 66 |

1.3.2 The measurement of the Radiated Emission(Above 1000 MHz)

\underline{x} - was performed in the following test site. ____ - was not applicable. Test location : Safety & EMC Center EMC Engineering Dept. Testing Div. 21-25, Kinuta 1-chome, Setagaya-ku, Tokyo 157-8573, Japan x - Anechoic Chamber A (3 meters) ____ - Anechoic Chamber B (3 meters) Validation of Site Attenuation : 1) Last Confirmed Date :March, 2007 2) Interval :1 year Used test instruments : Type Number of test instruments (Refer to Appendix) Test Receiver 13 Spectrum Analyzer N/A Cable 46, 195 Antenna 31 RF Amplifier 57 Band Reject Filter N/A High Pass Filter N/A

1.3.3 The measurement of the Conducted Spurious Emission

x - was performed in the following test site.
 _ was not applicable.

Used test instruments :

| Туре | Number of test instruments (Refer to Appendix) |
|-------------------|---|
| Test Receiver | N/A |
| Spectrum Analyzer | 13 |
| Cable | 45 |
| Attenuator | 80 |
| RF Amplifier | N/A |
| Signal Generator | 62 |

1.3.4 The measurement of the Modulation Characteristics and the Occupied Bandwidth <u>x</u> - was performed.

____ - was not applicable.

Used test instruments :

| Туре | Number of test instruments (Refer to Appendix) |
|--------------------|---|
| Test Receiver | 13 |
| Spectrum Analyzer | N/A |
| Function Generator | 58 |
| FM Linear Detector | 68 |
| Level Meter | 69 |
| Cable | 47 |
| Attenuator | |
| Antenna | 82 |
| DC Power Supply | 77 |

1.3.5 The measurement of the Frequency Stability

- \underline{x} was performed.
- ____ was not applicable.

Used test instruments :

| Туре | Number of test instruments |
|-------------------|----------------------------|
| | (Refer to Appendix) |
| Frequency Counter | 75 |
| Antenna | |
| Cable | 47 |
| Attenuator | 82 |
| Oven | 76 |
| DC Power Supply | 77 |

1.4 EUT MODIFICATION / Deviation from Standard

1.4.1 EUT MODIFICATION

x - No modifications were conducted by JQA to achieve compliance to Class B levels.
 To achieve compliance to Class B levels, the following changes were made by JQA during the compliance test.

| Т | The modifications will be implemented in all production models of this equipment. |
|---|---|
| L | Applicant : |

1.6 SUMMARY

General Remarks :

The EUT was tested according to the requirements of FCC Rules and Regulations Part 74 Subpart H under the test configuration, as shown in clause 1.7 to 1.10. The conclusion for the test items of which are required by the applied regulation is indicated under the test result.

Test Result :

The "as received" sample;

- x fulfill the test requirements of the regulation mentioned on clause 1.1.
- fulfill the test requirements of the regulation mentioned on clause 1.1, but with certain qualifications.
- doesn't fulfill the test regulation mentioned on clause 1.1.

Begin of testing: May 19, 2007

End of testing : June 26, 2007

- JAPAN QUALITY ASSURANCE ORGANIZATION - Approved by:

Eiichi Saegusa Manager Testing Division JQA EMC Engineering Dept. Issued by:

sawa

Shigeru Osawa Assistant Manager Testing Division JQA EMC Engineering Dept.

1.7 TEST CONFIGURATION / OPERATION OF EUT

1.7.1 Test Configuration

The equipment under test (EUT) consists of :

| Symbol | Item | Manufacturer | Model No. | FCC ID | Serial No. |
|--------|-----------------------|-----------------------|-----------|------------|------------|
| А | Tour Mic(Transmitter) | Seiden Electric | HEI-18YT | VGWHEI-18Y | None |
| | | Engineering Co., Ltd. | | | |

The measurements was carried out with the following supported connected :

| Symbol | Item | Manufacturer | Model No. | FCC ID | Serial No. |
|--------|------------|--------------|-----------|--------|------------|
| В | Microphone | None | None | None | None |

Type of cable :

| Symbol | Description | Identification (Manufacturer etc.) | Shielded YES / NO | Ferrite Core | Connector type Shielded YES / NO | Length (m) |
|--------|--------------------------|---------------------------------------|----------------------|-----------------|--|---------------|
| 1 | Cable(For Microphone) | - | No | No | No | 2.10 |

The measurement was carried out with the following support equipment connected :

1.7.2 Operating condition

The operating condition is the special mode, which is continuous operation mode. And, this mode was set by manufacturer. Power supply Voltage : 3.0VDC(Fresh Alkaline Battery used) or DC power supply The tests have been carried out under the transmitting condition. Operating Channel and Frequency:0 ch(802.000 MHz), 5 ch(803.000 MHz) and 9 ch(803.800 MHz)

1.7.3 Generating and Operating frequency of EUT

TX: 0 ch(802.000 MHz), 5 ch(803.000 MHz) and 9 ch(803.800 MHz) operation Clock Frequency: 21.4 MHz and 450 kHz

1.8 EUT ARRANGEMENT (DRAWINGS)

1.9 PRELIMINARY TEST AND TEST-SETUP (DRAWINGS)

1.9.1 RF Power Output and Radiated Emission (30 MHz - 1000 MHz) :

The radiated power output and the field strength of the transmitter harmonic and spurious radiation were measured at the distance at 3 meters away from the transmitter under test which was placed on a wooden turntable 0.8 meter in height. The receiving antenna was oriented for vertical polarization and raised or lowered through 1 to 4 meters until the maximum signal level was detected on the measuring instrument. The transmitter under test was rotated through 360° until the maximum signal was received. The measurement was repeated with the receiving antenna in the horizontal polarization.

The transmitter was removed and replaced with a half-wave dipole antenna. The center of the half-wave dipole antenna was placed approximately at the same location as the center of the transmitter. (In the case of the lower frequencies, where the half-wave dipole antenna is very long, this will be impossible to achieve when the antenna is polarized vertically. In such a case the lower end of the antenna was adjusted to 0.3m <u>above</u> the ground). The half-wave dipole antenna was fed with a signal generator, and the output level of the signal generator was adjusted to obtain the previously recorded maximum reading at the particular harmonics and spurious frequency and recorded. This procedure was repeated with the receiving antenna and the half-wave dipole antenna in the orthogonal polarization.

The input power into the half-wave dipole antenna was calculated from the impedance and signal generator voltage obtained in these reading. The level of the harmonics and spurious emissions in dB were calculated from the following formula:

Attenuation(dB)=10log ______ Transmitter Power(ERP) ______ Calculated Spurious Power

FCC ID :VGWHEI-18Y Issue Date :August 17, 2007 Page 13 of 42

Anechoic Chamber

- Side View -

FCC ID :VGWHEI-18Y Issue Date :August 17, 2007 Page 14 of 42

1.9.2 Radiated Emission (Above 1 GHz) :

The preliminary radiated emissions measurements were carried out. The preliminary radiated measurements were performed at the measurement distance that specified for compliance to determine the emission characteristics of the EUT.

The EUT configuration, cable configuration and mode of operation were determined for producing the maximum level of emissions. These configurations were used for the final radiated emissions measurements.

Anechoic Chamber

- Side View -

1.9.3 Conducted Emission:

Use the following spectrum analyzer settings: Span = wide enough to capture the peak level of the in-band emission and all spurious emissions (e.g., harmonics) from the lowest frequency generated in the EUT up through the 10th harmonic. Typically, several plots are required to cover this entire span. RBW = 10 kHz(below 1 GHz) and 1 MHz(above 1 GHz) VBW \geq 3 times RBW Sweep \leq 2000 Hz per second Detector function = mean or average power Allow the trace to stabilize. Set the marker on the peak of any spurious emission recorded. The level displayed must comply with the limit specified in this Section.

FCC ID :VGWHEI-18Y Issue Date :August 17, 2007 Page 16 of 42

1.9.4 Modulation Characteristics

The audio signal generator was connected to the input circuit of the unit under test through a matching network. The audio signal input was adjusted to obtain 50% modulation at the maximum audio frequency response of the transmitter, and this point was taken as the 0 dB reference level. The frequency of the input signal was changed from 100 Hz to 20 kHz and the input level to obtain 50% modulation was plotted. The modulation response was measured up to maximum modulation for each of three tones: 100 Hz, 2500 Hz and 15 kHz. The audio input level was changed from 10% modulation up to maximum rated modulation.

1.9.5 Occupied Bandwidth :

According to description of FCC Rules §2.1049, the occupied bandwidth measurements were carried out. By using a spectrum analyzer the measurements of the emission were made under the transmitting modes of the EUT.

The transmitter was modulated at the input level producing 85% modulation at the maximum response frequency, and with the frequency 2500 Hz.

FCC ID :VGWHEI-18Y Issue Date :August 17, 2007 Page 18 of 42

1.9.6 Frequency Stability :

The transmitter was placed in the temperature cycle chamber and was kept at a temperature of -30° C $\pm 1^{\circ}$ C for approximately one hour. The rated test voltage was applied to the transmitter and the unit was turned on for ten minutes. The transmit frequency was measured during this period and recorded. A similar measurement was performed with the temperatures changed from -20° C to 50° C at interval of 10° C. In the latter case, the unit was kept for approximately one hour at the prescribed temperature after completion of the test preceding with it.

The frequency stability tests were performed at the normal supply voltage and if required, with variation of primary supply voltage. (Refer to FCC Rules §2.1055)

- Note: 1. The spectrum was checked from 30 MHz to 10th harmonics. All emissions not listed were found to be more than 20 dB below the limits.
 - 2. The symbol of "<" means "or less".
 - 3. Specified Limits: (\$74.861(e)(6)(iii))
 Attenuation Ratio = 43 + 10log₁₀(mean output power in watt)
 This Limit is equivalent to -13 dBm(absolute value).
 - 4. Measuring Instrument Setting:

| Less than 1000 MHz | | |
|----------------------|---|---------|
| Detector function | : | Average |
| IF Bandwidth | : | 120 kHz |
| Above 1000 MHz | | |
| Resolution Bandwidth | : | 1 MHz |

Tested by : runa

2.4 Conducted Emissions Measurement

| Date : | June 25 | , 2007 | |
|--------|---------|---------------|------|
| Temp.: | 27 °C | Humi.: | 44 % |

2.4.1 Carrier Level

Frequency Range: 802.000 MHz - 803.800 MHz

| Frequency | Cable Loss | Attenuator Loss | Meter Reading | Output Power |
|-----------|------------|-----------------|---------------|--------------|
| (MHz) | (dB) | (dB) | (dBm) | (dBm) |
| 802.000 | 0.46 | 10.05 | -6.35 | 4.16 |
| 803.000 | 0.46 | 10.05 | -7.30 | 3.21 |
| 803.800 | 0.46 | 10.05 | -5.78 | 4.73 |

Note: 1. Specified limit (\$74.861(e)(1)(ii)); 250 mW(24.0 dBm)

2. A sample calculation: Output Level = CL + ATT + MR = 0.46 + 10.05 + (-6.35)= 4.16 (dBm) CL : Cable Loss ATT : Attenuator Loss MR : Meter Reading

2.4.2 Spurious Level

Operating Frequency : 802.000 MHz, 803.000 MHz and 803.800 MHz

In the case of all operating frequency, other spurious levels are 20 dB below the limit.

2.5 Occupied Bandwidth Measurement

| Date | : | June | 28, 2007 | |
|-------|---|------|----------|------|
| Temp. | : | 27°C | Humi.: | 52 % |

Measurements Results :

Necessary Bandwidth: 20 kHz (Manufacturer specified)
Maximum Deviation (100%): 7 kHz (Manufacturer specified)
5.40 kHz (Measurement value of 0ch(802.000MHz))
5.30 kHz (Measurement value of 5ch(803.000MHz))
5.05 kHz (Measurement value of 9ch(803.800MHz))

Input Level: 85% modulation point of Measurement value

Specified Limits: (§74.861(e)(6)(i)(ii))

Refer to the attached graphs.
