Subject: Industry Canada reassessment and FCC Class II permissive change for: VK6-ODU600LB,
and 4469A-ODU600LB

The maximum rated output power for these two models has not changed. During testing for this permissive change we saw maximum measured conducted power at a level 1.2dB higher than during our initial testing of these models. This is within the 2dB power tolerance stated for these models; hence the maximum power that can be set is 28dBm to ensure that 1W is never exceeded.

Sincerely,

A handwritten signature in black ink that reads 'R. French'.

RUTH FRENCH, PRODUCT COMPLIANCE MANAGER
