

DFS client device channel plan and software operational declaration

Date: January 24, 2024

We, **Masimo Corporation**, declare that the device, **FCC ID: VKF-MASIFDM1** Model Name: **Freedom Watch**, does not have Ad Hoc on “non-US frequencies” and/or on“ DFS frequencies“. Also, the client software and associated drivers will not initiate any transmission on DFS frequencies without initiation by a master. This includes restriction on transmissions for beacons and support for ad-hoc peer-to-peer modes.

Below is the channel / frequency plan for the device

2.4G

5G band IV

CH	149	151	153	155	157	159	161	165	
Frequency (MHz)	5745	5755	5765	5775	5785	5795	5805	5825	
Scan Type	Active	Active	Active	Active	Active	Active	Active	Active	

Also, on DFS channels, the WLAN driver in the device operates under the control of an AP at all times. The device passively scans DFS frequencies until a master device is detected. The control of this functionality is not accessible to anyone under any conditions. Furthermore, the firmware is protected by a special signature and CRC checksum. Signature and CRC checksum will be calculated and verified before firmware upgrade. Unauthorized modification to firmware will lead to the failure of verification and thus firmware upgrade will not be allowed.
