

Operation Principle

The DC 5.0V (with adaptor) for iPod Charge and main power. Via DC regulator supply 3.3V to system working. When MCU (U4 W79E834) start communicate with iPod player by iPod 30PIN connector, MCU get LICENSE by IC chip (M/N:MF1341S2164) to control iPod player. at one time, MCU communicate with RF remote by 2.4G RF Modular, Stereo Volume Controller output audio and video signal.
