Dear Henry Leung:

Enclosed you will find your file copy of a Part 15 Certification (FCC ID: VLJVEVA1210).

For your reference, TCB will normally take another 15 to 20 days for reviewing the report. Approval will then be granted when no query is sorted.

Please contact me if you have any questions regarding the enclosed material.

Sincerely,

Leung Wai Leung, Tommy
Senior Manager

This report concerns (check one:) Original Grant Class II Change

Equipment Type : PUB - Part 15 Unlicensed PCS Base Station
PUE - Part 15 Unlicensed PCS portable Tx held to ear

Deferred grant requested per 47 CFR 0.457(d)(1)(ii)? Yes No

If yes, defer until :

_____ Date

Company Name agrees to notify the Commission by: _____ Date

of the intended date of announcement of the product so that the grant can be issued on that date.

Transition Rules Request per 15.37? Yes No

If no, assumed Part 15, Subpart D for Unlicensed Personal Communication Service Device - the new 47 CFR [05-04-07 Edition] Provision.

**EXHIBIT 2
GENERAL DESCRIPTION**

INTERTEK TESTING SERVICES

2.0 General Description

2.1 Product Description

The Veva 1210 Twin is a 1.9GHz Digital Modulation Cordless Phone with Caller ID and Digital Answering Machine. It operates at frequency range of 1921.536MHz to 1928.448MHz with 5 channels (1921.536MHz, 1923.264MHz, 1924.992MHz, 1926.720MHz and 1928.448MHz). The Base Unit is powered by an AC adaptor 100-240VAC to 7.5VDC 300mA. The handset is powered by a "Ni-MH" type rechargeable battery (2.4V 600mAh). Their circuit wiring is consistent under the requirement of part 68.

The antennas used in base unit and handset are integral, and the test sample is a prototype.

The Models: Veva 1210, Veva 1210 Triple, Veva 1210 Quad and Veva 1210 Quin are the same as the Veva 1210 Twin in hardware aspects.

The Models: Veva 1200, Veva 1200 Twin, Veva 1200 Triple, Veva 1200 Quad and Veva 1200 Quin are the same as the Model: Veva 1210 Twin in hardware aspects except bases of Veva 1200 series has no flash IC for Digital Answering Machine function.

Veva 1200 and Veva 1210 has one base and one handset respectively.

Veva 1200 Twin and Veva 1210 Twin has one base, two handsets and one charger respectively.

Veva 1200 Triple and Veva 1210 Triple has one base, three handsets and two chargers respectively.

Veva 1200 Quad and Veva 1210 Quad has one base, four handsets and three chargers respectively.

Veva 1200 Quin and Veva 1210 Quin has one base, five handsets and four chargers respectively.

Difference in model number serves as marketing strategy.

Connection between the base unit and the telephone network is accomplished through the use of USOC RJ11C in the 2-wire loop calling central office line.

2.2 Technical Description

The circuit description and digital modulation techniques description are saved as filename: descri.pdf.

INTERTEK TESTING SERVICES

2.3 Related Submittal(s) Grants

This is an application for Certification of a PUB - Part 15 Unlicensed PCS Base Station and PUE - Part 15 Unlicensed PCS portable Tx held to ear. The device is also subject to Part 68 Registration.

A Verification report has been prepared for the digital device portion.

2.4 Test Methodology

The radiated emission measurements for unintentional radiator and AC power line-conducted emission measurements were performed according to the test procedures specified in ANSI C63.4 (2003). The radiated emission measurements for intentional radiator contained in UPCS device, conducted emission measurements, Listen Before Transmit (LBT) tests, Time Frame and Frequency Stability tests were performed according to the test procedures specified in Revision Draft ANSI C63.17 (2006). All radiated measurements were performed in Open Area Test Sites. Preliminary scans were performed in the Open Area Test Sites only to determine worst case modes. All radiated tests were performed at an antenna to EUT distance of 3 meters, unless stated otherwise in the "Justification Section" of this Application. All other measurements were made in accordance with the procedures in 47 CFR Part 2.

2.5 Test Facility

The open area test site and conducted measurement facility used to collect the emission data is located at Garment Centre, 576 Castle Peak Road, Kowloon, Hong Kong. This test facility and site measurement data have been fully placed on file with the FCC.

INTERTEK TESTING SERVICES

**EXHIBIT 3
SYSTEM TEST CONFIGURATION**

INTERTEK TESTING SERVICES

3.0 System Test Configuration

3.1 Justification

For emissions testing, the equipment under test (EUT) was setup to transmit continuously in burst mode with pseudo-random data to simplify the measurement methodology. Care was taken to ensure proper power supply voltages during testing. During testing, all cables (if any) were manipulated to produce worst-case emissions. The handset (if any) was powered by a fully charged battery.

For the measurements, the EUT was attached to a plastic stand if necessary and placed on the wooden turntable. If the base unit attached to peripherals, they were connected and operational (as typical as possible).

The signal was maximized through rotation and placement in the three orthogonal axes. The antenna height and polarization were varied during the search for maximum signal level. The antenna height was varied from 1 to 4 meters. Detector function was in peak mode. Radiated emissions are taken at three meters unless the signal level was too low for measurement at that distance. If necessary, a pre-amplifier was used and/or the test was conducted at a closer distance.

The spectrum analyzer resolution bandwidth was approximately 1% of the EUT emission bandwidth, unless otherwise specified.

Radiated emission measurements were performed from the lowest radio frequency signal generated in the device which is greater than 9 kHz to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.

As the base unit has 2 antennas, both have been checked. While conducting the test on one of antennas, another one was being disable its transmission. The data in this report represented the worst-case.

INTERTEK TESTING SERVICES

3.2 Conducted Emission Test Configuration

The setup and equipment setting were made in accordance with ANSI C63.17. The antenna of EUT transmitter was replaced by a coaxial cable. The impedance matching of connection, cable loss and external RF attenuator are taken into account. The EUT was arranged to communicate via a fixed carrier frequency between its transmitter and a companion device. The transmission was configured in burst mode with pseudo-random data as typical as normal operation.

Figure 3.2.1

3.3 Conducted Monitoring and Operational Test Configuration

Figure 3.3.1

3.4 EUT Exercising Software

The EUT exercise programs (if any) used during radiated and conducted testing was designed to exercise the various system components in a manner similar to a typical use.

INTERTEK TESTING SERVICES

3.5 Details of EUT and Description of Peripherals

Details of EUT:

An AC adaptor and/or a battery (provided with the unit) were used to power the device. Their description are listed below.

- (1) Base Unit: An AC adaptor (100-240VAC to 7.5VDC 300mA, Model: SSA-5W-09 US 075030F) (Supplied by Client)
- (2) Extra Charger: An AC adaptor (permanently affixed) (100-240VAC to 7.5VDC 200mA, Model: SSA-5W-09 US 075020F) (Supplied by Client)
- (3) Handset: A "Ni-MH" type rechargeable battery (2.4V 600mAh) (Supplied by Client)

Description of Peripherals:

- (1) Telecommunication cable with RJ11C connectors (1m, unshielded), terminated (Supplied by Intertek)

INTERTEK TESTING SERVICES

3.6 Measurement Uncertainty

When determining of the test conclusion, the Measurement Uncertainty test has been considered.

3.7 Equipment Modification

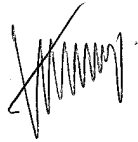

Any modifications installed previous to testing by Binatone Electronics International Ltd. will be incorporated in each production model sold/leased in the United States.

No modifications were installed by Commercial & Electrical Division, Intertek Testing Services Hong Kong Ltd.

All the items listed under section 3.0 of this report are confirmed by:

MEASUREMENT RESULTS**

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.0 **Measurement Results**

4.1 Antenna Requirement, FCC Rule 15.317:

EUT must meet the antenna requirement of FCC Rule 15.203.

EUT uses a permanently attached antenna which is considered sufficient to comply with the provisions of this rule. Please refer to Exhibit 5: Internal Photos for more details.

EUT uses a unique antenna jack or electrical connector which is considered sufficient to comply with the provisions of this rule. Please refer to Exhibit 5: Internal Photos for more details.

4.2 Digital Modulation Techniques, FCC Rule 15.319(b):

All transmissions must use only digital modulation techniques.

The requirements are made in accordance with ANSI C63.17 sub-clause 6.1.4.

Attestation:

Please refer to the technical description in section 2.2 or relevant DECT standards for more details.

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.3 Emission Bandwidth, FCC Rule 15.323(a):

Operation shall be contained within the 1920 – 1930 MHz band. The emission bandwidth (*B*) shall be less than 2.5 MHz and greater than 50 kHz.

Measurements are made in accordance with ANSI C63.17 sub-clause 6.1.3. Test setup is shown in section 3.2 Figure 3.2.1.

Test Results:

I. Traffic Carrier - Base Unit

Channel	Channel Frequency (MHz)	Measuring Signal Level	Measured Emission Bandwidth (MHz)	Results
Lowest	1921.536	26 dB down	1.50	Pass
Highest	1928.448	26 dB down	1.49	Pass

II. Dummy Carrier - Base Unit

Channel	Channel Frequency (MHz)	Measuring Signal Level	Measured Emission Bandwidth (MHz)	Results
Lowest	1921.536	26 dB down	1.37	Pass
Highest	1928.448	26 dB down	1.40	Pass

III. Traffic Carrier - Handset

Channel	Channel Frequency (MHz)	Measuring Signal Level	Measured Emission Bandwidth (MHz)	Results
Lowest	1921.536	26 dB down	1.49	Pass
Highest	1928.448	26 dB down	1.49	Pass

Model: Veva 1210 Twin

4.4 Directional Gain of the Antenna, FCC Rule FCC 15.319(e):

The peak transmit power shall be reduced by the amount in dB that the maximum directional gain of the antenna exceeds 3 dBi.

The requirements are made in accordance with ANSI C63.17 sub-clause 4.3.1.

- Manufacturer declares that the directional gain of the antenna is less than or equal to 3dBi. No peak transmit power reduction is required.
- Manufacturer declares that the directional gain of the antenna is greater than 3dBi. The peak transmit power shall be reduced by _____ dB.

INTERTEK TESTING SERVICES

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.6 Power Spectral Density, FCC Rule 15.319(d):

Power spectral density shall not exceed 3 mW (4.8dBm) in any 3 kHz bandwidth as measured with a spectrum analyzer having a resolution bandwidth of 3 kHz.

Measurements are made in accordance with ANSI C63.17 sub-clause 6.1.5. Test setup is shown in section 3.2 Figure 3.2.1.

Test Results:

I. Traffic Carrier - Base Unit

Channel	Channel Frequency (MHz)	Measured Power Spectral Density (dBm/3kHz)	Limit (dBm/3 kHz)	Results
Lowest	1921.536	-12.9	4.8	Pass
Highest	1928.448	-13.0	4.8	Pass

II. Dummy Carrier - Base Unit

Channel	Channel Frequency (MHz)	Measured Power Spectral Density (dBm/3kHz)	Limit (dBm/3 kHz)	Results
Lowest	1921.536	-13.0	4.8	Pass
Highest	1928.448	-7.8	4.8	Pass

III. Traffic Carrier - Handset

Channel	Channel Frequency (MHz)	Measured Power Spectral Density (dBm/3kHz)	Limit (dBm/3 kHz)	Results
Lowest	1921.536	-6.0	4.8	Pass
Highest	1928.448	-6.1	4.8	Pass

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.7 Automatic Discontinuation of Transmission, FCC Rule 15.319(f):

The EUT shall automatically discontinue transmission in case of either absence of information to transmit or operational failure. These provisions are not intended to preclude transmission of control and signaling information or use of repetitive codes used by certain digital technologies to complete frame or burst intervals.

Test Procedures:

The following tests simulate the reaction of EUT in case of either absence of information to transmit or operational failure after a connection of its companion device is established. Test setup is shown in section 3.2 Figure 3.2.1.

Test Descriptions and Results:

I. Base Unit:

	Test Descriptions	Reaction of EUT	Results
1	Switch-off companion device	B	Pass
2	On Hook by companion device	B	Pass
3	Remove power from companion device	B	Pass
4	Switch-off EUT	NA	NA
5	On Hook on EUT Side	NA	NA
6	Remove power from EUT	A	Pass

- A – Connection is terminated and, transmission ceases.
- B – Connection is terminated but EUT transmits control or signalling information.
- C – Connection is terminated but companion device transmits control or signaling information.
- NA – Not applicable, represents the device does not contain a hook switch or a power off switch

[x] The manufacturer declares that the EUT can automatically discontinue transmission in case of either absent information to transmit or operational failure. The manufacturer's declaration is saved as filename: declaration.pdf.

4.7 Automatic Discontinuation of Transmission, FCC Rule 15.319(f): - Continued

II. Handset:

	Test Descriptions	Reaction of EUT	Results
1	Switch-off companion device	NA	NA
2	On Hook by companion device	NA	NA
3	Remove power from companion device	A	Pass
4	Switch-off EUT	C	Pass
5	On Hook on EUT Side	C	Pass
6	Remove power from EUT	C	Pass

- A – Connection is terminated and, transmission ceases.
- B – Connection is terminated but EUT transmits control or signaling information.
- C – Connection is terminated but companion device transmits control or signaling information.
- NA – Not applicable, represents the device does not contain a hook switch or a power off switch

[×] The manufacturer declares that the EUT can automatically discontinue transmission in case of either absent information to transmit or operational failure. The manufacturer's declaration is saved as filename: declaration.pdf

INTERTEK TESTING SERVICES

Model: Veva 1210 Twin

4.8 Unwanted Emission Inside the Sub-Band, FCC Rule 15.323(d):

Emissions inside the sub-band must comply with the following emission mask:

1. In the bands between $1B$ and $2B$ measured from the center of the emission bandwidth, emission shall be at least 30 dB below the permitted peak transmit power; i.e. -9.5 dBm
2. In the bands between $2B$ and $3B$ measured from the center of the emission bandwidth, emission shall be at least 50 dB below the permitted peak transmit power; i.e. -29.5 dBm
3. In the bands between $3B$ and the band edge, emission shall be at least 60 dB below the permitted peak transmit power. i.e. -39.5 dBm

Where B = emission bandwidth in Hz

Measurements are made in accordance with ANSI C63.17 sub-clause 6.1.6.1. Test setup is shown in section 3.2 Figure 3.2.1.

Test Results:

I. Traffic Carrier - Base Unit

Channel	Channel Frequency (MHz)	Results
Lowest	1921.536	Pass
Highest	1928.448	Pass

II. Dummy Carrier - Base Unit

Channel	Channel Frequency (MHz)	Results
Lowest	1921.536	Pass
Highest	1928.448	Pass

III. Traffic Carrier - Handset

Channel	Channel Frequency (MHz)	Results
Lowest	1921.536	Pass
Highest	1928.448	Pass

Model: Veva 1210 Twin

4.9 Emissions Outside the Sub-Band, FCC Rule 15.323(d):

Emissions outside the sub-band shall be attenuated below a reference power of 112 mW (20.5 dBm) as follows:

1. 30 dB between the band edge and 1.25 MHz above or below the band;
2. 50 dB between 1.25 and 2.5 MHz above or below the band; and
3. 60 dB at 2.5 MHz or greater above or below the band, or shall meet the requirement of FCC Rule 15.319(g) which shall not exceed the limits of FCC Rule 15.209.

Example: Calculation of Limit for emissions between the band edge and 1.25 MHz (1920.000 – 1918.750 MHz)

The emissions shall not exceed the Limit: 20.5 dBm – 30 dB = -9.5 dBm

Measurements are made in accordance with ANSI C63.17 sub-clause 6.1.6.2. As EUT has non-detachable antenna(s), radiated emissions test method is used for out-of-band emissions tests. Emissions that are directly caused by digital circuits in the transmit path and transmitter portion are measured. Test setup and procedures are described in section 3.2 Figure 3.2.1.

Test Results:

Base Unit & Handset:

Channel	Carrier Frequency (MHz)	Measured Band (MHz)	Limit (dBm)	Results
Lowest	1921.536	1920.000 - 1918.750	-9.5	Pass
		1918.750 - 1917.500	-29.5	Pass
		0.009 - 1917.500 & 1932.500 - 19300.000	-39.5 / FCC Rule 15.209	Pass
Highest	1928.448	1930.000 - 1931.250	-9.5	Pass
		1931.250 - 1932.500	-29.5	Pass
		0.009 - 1917.500 & 1932.500 - 19300.000	-39.5/ FCC Rule 15.209	Pass

Please refer to the section 4.9.1 to 4.9.4 for more details.

4.9.3 Field Strength Calculation

The field strength is calculated by adding the reading on the Spectrum Analyzer to the factors associated with preamplifiers (if any), antennas, cables, pulse desensitization and average factors (when specified limit is in average and measurements are made with peak detectors). A sample calculation is included below.

$$FS = RA + AF + CF - AG + PD + AV$$

Where

- FS = Field Strength in dB μ V/m
- RA = Receiver Amplitude (including preamplifier) in dB μ V
- CF = Cable Attenuation Factor in dB
- AF = Antenna Factor in dB
- AG = Amplifier Gain in dB
- PD = Pulse Desensitization in dB
- AV = Average Factor in -dB

In the radiated emission table which follows, the reading shown on the data table may reflect the preamplifier gain. An example of the calculations, where the reading does not reflect the preamplifier gain, follows:

$$FS = RA + AF + CF - AG + PD + AV$$

Example

Assume a receiver reading of 62.0 dB μ V is obtained. The antenna factor of 7.4 dB and cable factor of 1.6 dB is added. The amplifier gain of 29.0 dB is subtracted. The pulse desensitization factor of the spectrum analyzer is 0.0 dB, and the resultant average factor is -10.0 dB. The net field strength for comparison to the appropriate emission limit is 32.0 dB μ V/m. This value in dB μ V/m is converted to its corresponding level in μ V/m.

RA = 62.0 dB μ V
AF = 7.4 dB
CF = 1.6 dB
AG = 29.0 dB
PD = 0.0 dB
AV = -10 dB

$$FS = 62.0 + 7.4 + 1.6 - 29.0 + 0.0 + (-10.0) = 32.0 \text{ dB}\mu\text{V/m}$$

Level in mV/m = Common Antilogarithm [(32.0 dB μ V/m)/20] = 39.8 μ V/m

4.11 Radiated Emissions from Computing Device Peripheral Portion of EUT, FCC Rule 15.109(a):

EUT includes computing device peripheral circuitry and is subject to the requirements of FCC Part 15 Subpart B. The radiated emission shall not exceed the limits of FCC Rule 15.109(a).

Measurements are made in accordance with ANSI C63.4 sub-clause 8 and section 3.1. Radiated emissions shall be measured with EUT operating in typical operation modes. The spectrum analyzer resolution bandwidth was 100 kHz or greater for frequencies below 1000 MHz.

- [x] Not applicable – No computing device peripheral
- [] The computing device peripheral portion of EUT is subject to FCC Part 15 Subpart B, Certification. Please refer to the section 4.11.1 for more details.
- [] The computing device peripheral portion of EUT is subject to FCC Part 15 Subpart B, DoC. Emission Data are included in the separated DoC report.

4.13 Radio Frequency Radiation Exposure, FCC Rule 15.319(i):

EUT is subject to the radio frequency exposure requirements specified in FCC Rule §§ 1.1307(b), 2.1091 and 2.1093. It shall be considered to operate in a “general population / uncontrolled” environment.

- [x] Handset Unit: EUT was evaluated for Specific Absorption Rate (SAR) evaluation compliance according to OET Bulletin 65, Supplement C (Edition 01-01). It is in compliance with the SAR evaluation requirements. The caution statement specified in the user manual. A SAR test report was submitted at the same time and saved as SAR report 1 of 2.pdf and SAR report 2 of 2.pdf
- [x] Base Unit: EUT was evaluated for Maximum Permissible Exposure (MPE) evaluation compliance according to OET Bulletin 65, Supplement C (Edition 01-01). The evaluation calculation results are saved as filename: RF exposure info.pdf.

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.14 Frame Repetition Stability, FCC Rule 15.323(e):

- [] EUT implements Time Division Duplex (TDD) in order to support duplex connection on a given frequency carrier shall maintain a frame repetition rate whereby 3 X the standard deviation of the frequency stability shall not exceed 50 ppm, not including a shift of the mean.

- [x] EUT uses Time Division Multiple Access (TDMA) in order to support multiple communication links on a given frequency carrier shall maintain a frame repetition rate whereby 3 X standard deviation of the frequency stability shall not exceed 10 ppm, not including a shift of the mean.

Measurements are made in accordance with ANSI C63.17 sub-clause 6.2.2. Test setup is shown in section 3.2 Figure 3.2.1. A spectrum analyzer measures the time duration between rising edges of two consecutive frames over a time period of at least 1000 frame periods. These measurement values are used to compute the 3 X standard deviation of the frequency stability.

Test Results:

I. Base Unit:

Maximum Frame Repetition Stability (ppm)	Limit (ppm)	Results
0.1070	10	Pass

II. Handset:

Maximum Frame Repetition Stability (ppm)	Limit (ppm)	Results
0.1214	10	Pass

INTERTEK TESTING SERVICES

Model: Veva 1210 Twin

4.15 Frame Period and Jitter, FCC Rule 15.323(e):

The frame period (a set of consecutive time slots in which the position of each time slot can be identified by reference to a synchronizing source) of EUT operating in these sub-bands shall be 20 ms or 10 ms/X where X is a positive whole number.

The jitter (time-related, abrupt, spurious variations in the duration of the frame interval) introduced at the two ends of such a communication link shall not exceed 25 μ s for any two consecutive transmissions. Transmissions shall be continuous in every time and spectrum window during the frame period defined for EUT.

Measurements are made in accordance with ANSI C63.17 sub-clause 6.2.3. Test setup is shown in section 3.2 Figure 3.2.1. A spectrum analyzer measures the time duration between the rising edges of two consecutive frames. The measurements are taken over 100,000 frames. These measurement values are used to compute mean value and the difference between any two consecutive frame periods. The mean value is the frame period.

Test Results:

I. Jitter - Base Unit

Measured Maximum Jitter (μ s)	Limit (μ s)	Results
-0.3618	± 25	Pass

II. Jitter - Handset

Measured Maximum Jitter (μ s)	Limit (μ s)	Results
-0.5381	± 25	Pass

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
 Model: Veva 1210 Twin

4.16 Carrier Frequency Stability, FCC Rule 15.323(f):

The carrier frequency stability of EUT shall be maintained within +/-10 ppm at the following conditions:

1. Over 1 hour at nominal supply voltage and a temperature of +20 °C;
2. Over a variation in the primary supply voltage of 85 % to 115 % of nominal supply voltage at a temperature of +20 °C. This test does not apply to an EUT that is only powered by battery for operation;
3. Over a temperature variation of -20 °C to +50 °C or at extreme temperatures as declared by manufacturer, and at nominal supply voltage.

For Base Unit:

The nominal supply voltage: 120 VAC and the extreme temperatures of -20°C to +50°C are declared by manufacturer.

For Handset:

The nominal supply voltage: 2.4 VDC and the extreme temperatures of -20°C to +50°C are declared by manufacturer.

Measurements are made in accordance with ANSI C63.17 sub-clause 6.2.1 The EUT and CMD60 is connected with shielded coaxial cable. The EUT is controlled by DECT Radio Communication Tester, CMD60, to use a fixed frequency channel during test as well as record the frequency offset. The transmission of EUT is in burst mode with pseudo-random data. Test setup is shown as follows.

I. Carrier Frequency Stability over time - Base Unit

Supply Voltage	Temperature (°C)	Measured Frequency Offset Over an hour (ppm)		Limit (ppm)	Results
		Max.	Min.		
Nominal	+20°C	0.85	-0.71	±10	Pass

II. Carrier Frequency Stability over time – Handset

Supply Voltage	Temperature (°C)	Measured Frequency Offset Over an hour (ppm)		Limit (ppm)	Results
		Max.	Min.		
Nominal	+20°C	0.76	-0.80	±10	Pass

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.16 Carrier Frequency Stability, FCC Rule 15.323(f): - Continued

III. Carrier Frequency Stability over Power Supply Voltage - Base Unit

Supply Voltage	Temperature (°C)	Measured Frequency Offset (ppm)	Limit (ppm)	Results
85%	+20°C	1.37	±10	Pass
115%	+20°C	0.85	±10	Pass

IV. Carrier Frequency Stability over Temperature - Base Unit

Supply Voltage	Temperature (°C)	Measured Frequency Offset (ppm)	Limit (ppm)	Results
Nominal	-20°C	3.45	±10	Pass
Nominal	+50°C	-0.71	±10	Pass

V. Carrier Frequency Stability over Temperature - Handset

Supply Voltage	Temperature (°C)	Measured Frequency Offset (ppm)	Limit (ppm)	Results
Nominal	-20°C	0.76	±10	Pass
Nominal	+50°C	-0.28	±10	Pass

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
 Model: Veva 1210 Twin

4.17 Monitoring Threshold:

Monitoring threshold can be relaxed according to FCC Rule 15.323(c)(9). EUT that has a power output lower than the maximum permitted under FCC Rule 15.319(c) may increase their monitoring detection threshold by one decibel for each one decibel that the transmitter power is below the maximum permitted.

Calculation of Monitoring Threshold Limit:

$$\begin{aligned} \text{Monitoring Threshold } (T) &\leq -174 + 10 \log_{10} B + M + P_{\max} - P_{\text{EUT}} \text{ dBm} \\ &\leq 15 \log_{10} B - 184 + M - P_{\text{EUT}} \text{ dBm} \end{aligned}$$

- Where B = Measured Occupied Bandwidth of Base Unit: 1.37 x10⁶ Hz
 B = Measured Occupied Bandwidth of Handset: 1.49 x10⁶ Hz
 M = 30 dB for Lower Monitoring Threshold (T_L), or
 = 50 dB for Upper Monitoring Threshold (T_U)
 P_{\max} = 5 log₁₀ B – 10 dBm
 P_{EUT} = Measured Peak Transmit Power of Base Unit: 18.69 dBm
 P_{EUT} = Measured Peak Transmit Power of Handset: 20.39 dBm

Calculated Monitoring Threshold Limits:

I. Base Unit:

Lower Monitoring Threshold (T_L) in dBm	-80.6
Upper Monitoring Threshold (T_U) in dBm	-60.6

II. Handset

Lower Monitoring Threshold (T_L) in dBm	-81.8
Upper Monitoring Threshold (T_U) in dBm	-61.8

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.17.1 Lower Monitoring Threshold, FCC Rule 15.323(c)(2):

- [×] Not applicable – EUT which supports at least of 40 duplex system access channels and implements Least Interfered Channel (LIC) algorithm is permitted to use an upper monitoring threshold. Please refer to the section 4.17.2 for more details.
- [] The lower monitoring threshold must not be more than 30 dB above the thermal noise power for a bandwidth equivalent to the emission bandwidth used by EUT.

Measurements are made in accordance with ANSI C63.17 sub-clause 7.3.1(b). Test setup is shown in section 3.3 Figure 3.3.1. The test is performed on the carrier closest to center of the band. RF signal generators apply uniform CW interference on all EUT carriers each at level $T_L + 10$ dB. Then, the interference level is reduced uniformly on all carriers until the EUT can transmit. The interference level shall be lower than or equal to the threshold limit.

Test Results:

I. Base Unit

Measured Maximum Interference Level (dBm)	Adjusted Lower Monitoring Threshold Limit (dBm)	Results
NA	-80.6	NA

II. Handset

Measured Maximum Interference Level (dBm)	Adjusted Lower Monitoring Threshold Limit (dBm)	Results
NA	-81.8	NA

NA - Not Applicable

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.17.2 Least Interfered Channel, LIC, FCC Rule 15.323(c)(5):

- [] Not implemented – EUT met lower monitoring threshold requirements. Please refer to the section 4.17.1 for more details

- [x] If access to spectrum is not available as determined by section 4.17.1 and a minimum of 40 duplex system access channels are defined for the EUT, the time and spectrum windows with the lowest power level below a monitoring threshold of 50 dB above the thermal noise power determined for the emission bandwidth may be accessed

Number of duplex channels per frequency channel = 12
Number of frequency channel = 5
Total Duplex Channels = 60

Hence, the time and spectrum windows below upper monitoring threshold may be accessed.

4.17.2.1 Upper Monitoring Threshold, FCC Rule 15.323(c)(5):

Measurements are made in accordance with ANSI C63.17 sub-clause 7.3.2(b). Test setup is shown in section 3.3 Figure 3.3.1. The test is performed on the carrier closest to center of the band. RF signal generators apply uniform CW interference on all EUT carriers each at level $T_U + UM + 10$ dB. Then, the interference level is reduced uniformly on all carriers until the EUT can transmit. The interference level shall be lower than or equal to the threshold limit.

Test Results:

I. Base Unit:

Measured Maximum Interference Level (dBm)	Upper Monitoring Threshold Limit (dBm)	Results
-62.4	-60.6	Pass

II. Handset:

Measured Maximum Interference Level (dBm)	Upper Monitoring Threshold Limit (dBm)	Results
-59.8	-61.8	Pass*

Remarks: * 6dB of measurement uncertainty (UM) is considered.

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
 Model: Veva 1210 Twin

4.17.2.2 Least Interfered Channel (LIC) Selection, FCC Rule 15.323(c)(5):

The criteria are specified in section 4.17.2. In addition, the power measurement resolution for this comparison must be accurate to within 6 dB.

Measurements are made in accordance with ANSI C63.17 sub-clause 7.3.3. Test setup is shown in section 3.3 Figure 3.3.1. RF signal generators apply uniform CW interference on all EUT carriers except two carriers (designated f_1 and f_2), each at level T_U . EUT can only transmit on these two carriers.

Test Descriptions and Results:

I. LIC Procedure - Base Unit:

	Test Descriptions	EUT transmits on	Results
1	Apply interference on f_1 at level $T_L + 7$ dB. Apply interference on f_2 at level T_L . Initiate transmission. Verify transmission on f_2 . Terminate transmission. Repeat 5 times.	f_2	Pass
2	Apply interference on f_1 at level T_L . Apply interference on f_2 at level $T_L + 7$ dB. Initiate transmission. Verify transmission on f_1 . Terminate transmission. Repeat 5 times.	f_1	Pass
3	Apply interference on f_1 at level $T_L + 1$ dB. Apply interference on f_2 at level $T_L - 6$ dB. Initiate transmission. Verify transmission on f_2 . Terminate transmission. Repeat 5 times.	f_2	Pass
4	Apply interference on f_1 at level $T_L - 6$ dB. Apply interference on f_2 at level $T_L + 1$ dB. Initiate transmission. Verify transmission on f_1 . Terminate transmission. Repeat 5 times.	f_1	Pass

4.17.2.2 Least Interfered Channel (LIC) Selection, FCC Rule 15.323(c)(5): - Continued

II. LIC Procedure - Handset:

	Test Descriptions	EUT transmits on	Results
1	Apply interference on f_1 at level $T_L + 7$ dB. Apply interference on f_2 at level T_L . Initiate transmission. Verify transmission on f_2 . Terminate transmission. Repeat 5 times.	f_2	Pass
2	Apply interference on f_1 at level T_L . Apply interference on f_2 at level $T_L + 7$ dB. Initiate transmission. Verify transmission on f_1 . Terminate transmission. Repeat 5 times.	f_1	Pass
3	Apply interference on f_1 at level $T_L + 1$ dB. Apply interference on f_2 at level $T_L - 6$ dB. Initiate transmission. Verify transmission on f_2 . Terminate transmission. Repeat 5 times.	f_2	Pass
4	Apply interference on f_1 at level $T_L - 6$ dB. Apply interference on f_2 at level $T_L + 1$ dB. Initiate transmission. Verify transmission on f_1 . Terminate transmission. Repeat 5 times.	f_1	Pass

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.17.2.3 Least Interfered Channel (LIC) Confirmation, FCC Rule 15.323(c)(5):

EUT utilizing the provision of FCC Rule 15.323(c)(5) must have monitored all access channels defined for its system within the last 10 s and must verify, within the 20 ms (40 ms for EUT designed to use a 20 ms frame period) immediately preceding actual channel access that the detected power of the selected time and spectrum windows is no higher than the previously detected value.

Measurements are made in accordance with ANSI C63.17 sub-clause 7.3.4. This test is performed in section 4.18.

Results:

The tests are reported in section 4.18.

4.17.2.4 Maximum Spectrum Occupancy, FCC Rule 15.323(c)(5):

No EUT or group of co-operating EUTs located within 1 meter of each other shall during any frame period occupy more than 6 MHz of aggregate bandwidth, or alternatively, more than one third of the time and spectrum windows defined by the EUT.

Attestation:

According to the technical description provided, the total number of the time and spectrum windows defined by the system is $5 \times 12 = 60$

During any frame period, the maximum number of time and spectrum windows occupied by the system will be 12, which is less than one third of the time and spectrum windows defined by the system.

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
 Model: Veva 1210 Twin

4.18 Monitoring Time, FCC Rule 15.323(c)(1):

Immediately prior to initiating transmission, EUT must monitor the combined time and spectrum windows in which they intend to transmit for a period of at least 10 ms for EUT designed to use a 10 ms or shorter frame period, or at least 20 ms for EUT designed to use a 20 ms frame period.

Measurements are made in accordance with ANSI C63.17 sub-clause 7.3.4. Test setup is shown in section 3.3 Figure 3.3.1. RF signal generators apply uniform CW interference on all system carriers except two carriers (designated f_1 and f_2), each at level T_U . EUT can only transmit on these two carriers.

Test Descriptions and Results:

I. Base Unit:

	Test Descriptions	EUT transmits on	Results
1	Apply interference on f_1 at level T_U , and no interference on f_2 . Initiate transmission. Verify transmission on f_2 . Then, terminate transmission.	f_2	Pass
2	Apply interference on f_2 at level T_U , and remove interference from f_1 immediately. Also immediately initiate transmission but is at least 20 ms after interference on f_2 is applied. Verify transmission on f_1 .	f_1	Pass

II. Handset:

	Test Descriptions	EUT transmits on	Results
1	Apply interference on f_1 at level T_U , and no interference on f_2 . Initiate transmission. Verify transmission on f_2 . Then, terminate transmission.	f_2	Pass
2	Apply interference on f_2 at level T_U , and remove interference from f_1 immediately. Also immediately initiate transmission but is at least 20 ms after interference on f_2 is applied. Verify transmission on f_1 .	f_1	Pass

INTERTEK TESTING SERVICES

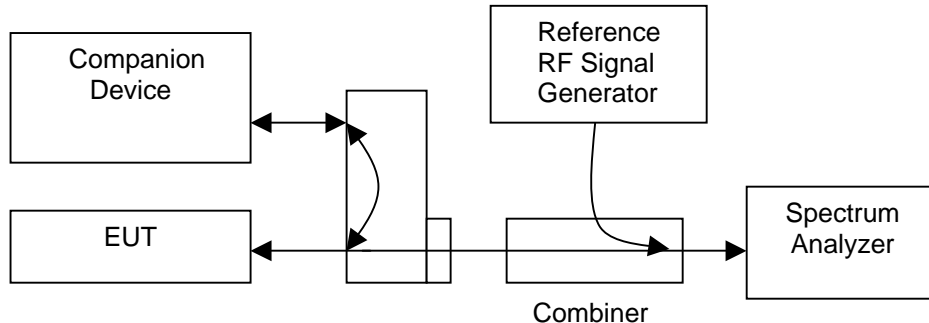

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
 Model: Veva 1210 Twin

4.19 Maximum Transmit Period, FCC Rule 15.323(c)(3):

If no signal above the threshold level is detected, transmission may commence and continue with the same emission bandwidth in the monitored time and spectrum windows without further monitoring. However, occupation of the same combined time and spectrum windows by a EUT or group of co-operating EUTs continuously over a period of time longer than 8 hours is not permitted without repeating the access criteria.

EUT establishes a communication channel with its companion device, which occupies the duplex pair combined time and spectrum windows. Reference RF signal generator synchronized with the sample and then generated a pulse as a time frame reference. The centre frequency of spectrum analyzer was set to the carrier frequency and the SPAN was set to ZERO. The spectrum analyzer was used to monitor the time (reference to the time signal) and spectrum of the communication channel. The occupied time or spectrum of the communication channel shall be changed over a period of time no longer than 8 hours. For a EUT with a frame period of 10/X ms, no more than 2,880,000 X frames should be transmitted without a break.

Test setup is shown as follows:

Test Results:

I. Base Unit:

Measured Maximum Transmission Duration (seconds)	Limit (seconds)	Results
600	28,800	Pass

II. Handset:

Measured Maximum Transmission Duration (seconds)	Limit (seconds)	Results
600	28,800	Pass

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.20 System Acknowledgement, FCC Rule 15.323(c)(4):

Once access to specific combined time and spectrum windows is obtained an acknowledgment from a system participant must be received by the initiating transmitter within one second or transmission must cease. Periodic acknowledgments must be received at least every 30 seconds or transmission must cease. Channels used exclusively for control and signaling information may transmit continuously for 30 seconds without receiving an acknowledgment, at which time the access criteria must be repeated.

Measurements are made in accordance with ANSI C63.17 sub-clause 8.1.1 and 8.2.1. Test setup is shown in section 3.3 Figure 3.3.1.

Test Results:

I. Base Unit

[x] Timing for EUTs using control and signaling channel type transmissions:

Conditions	Transmission Duration (seconds)	Limit (seconds)	Results
Time needed to repeat access criteria	1.28	30	Pass

[x] Timing for EUTs using communications channel type transmissions:

Conditions	Transmission Duration (seconds)	Limit (seconds)	Results
Activate EUT w/ companion device off	NA	1	NA
Time needed to cease Traffic Channel	0.02	30	Pass

NA - Not applicable

Model: Veva 1210 Twin

4.24 Monitoring Antenna, FCC Rule 15.323(c)(8):

The monitoring system shall use the same antenna used for transmission, or an antenna that yields equivalent reception at that location.

- EUT uses the same antenna used for transmission and monitoring that is in compliance meet above provision.
- EUT uses difference antenna used for transmission and monitoring. It must be verified that the monitoring antenna provides coverage equivalent to that of the transmitting antenna. Measurements are made in accordance with ANSI C63.17 sub-clause 4.

INTERTEK TESTING SERVICES

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.25 Duplex Connections, FCC 15.323(c)(10):

An initiating device may attempt to establish a duplex connection by monitoring both its intended transmit (Tx) and receive (Rx) time and spectrum windows. If both the intended transmit and receive time and spectrum windows meet the access criteria, then the initiating device can initiate a transmission in the intended transmit time and spectrum window. If the power detected by the responding device can be decoded as a duplex connection signal from the initiating device, then the responding device may immediately begin transmitting on the receive time and spectrum window monitored by the initiating device.

Measurements are made in accordance with ANSI C63.17 sub-clause 8.3. Test setup is shown in section 3.3 Figure 3.3.1.

Attestation:

Base Unit: Not applicable.

Handset: The EUT is the initiating device of the duplex connection

Test Results:

I. Base Unit

Dual Access Criteria Check for EUT not Implemented the Upper Threshold:

Interference	Reaction of EUT	Results
All Tx and Rx Window, except one for Rx Window	NA	NA
All Tx and Rx Window, except one for Tx Window	NA	NA

- A – Could be connected on the target Rx window and its duplex mate
- B – Could be connected on the target Tx window and its duplex mate
- C – Could not be connected
- NA – Not applicable

Company: Binatone Electronics International Ltd. Date of Test: January 19-March 12, 2008
Model: Veva 1210 Twin

4.26 Alternative Monitoring Interval for Co-located Device, FCC Rule 15.323(c)(11):

An initiating device that is prevented from monitoring during its intended transmit window due to monitoring system blocking from the transmissions of a co-located (within one meter) transmitter of the same system, may monitor the portions of the time and spectrum windows in which they intend to receive over a period of at least 10 ms. The monitored time and spectrum window must total at least 50 % of the 10 ms frame interval and the monitored spectrum must be within the 1.25 MHz frequency channel(s) already occupied by that device or co-located co-operating devices. If the access criteria is met for the intended receive time and spectrum window under the above conditions, then transmission in the intended transmit window by the initiating device may commence.

Measurements are made in accordance with ANSI C63.17 sub-clause 8.4.

Attestation:

- [] Appropriate as it is Co-located Device, in which the monitoring system will be blocked from the transmissions of a co-located (Within one meter) transmitter of the same system. Please refer to attachment, 15.323(c)(11).pdf, for details.
- [x] Not appropriate, as it is Cordless Telephone Application.
