RE: ATCB005489

FCC ID: VO4Q11S5

I have a few comments on this application. Depending on your responses, kindly understand there may be additional comments.

1. Please clarify if the output power is 32 ± 4 dBm for GSM 850 and 29 ± 4 dBm for PCS 1900 in the Tune up procedure. The SAR must be measured with output power 36dBm for GSM 850 and 33 dBm for PCS1900 as shown in the tune up procedure.
2. Please indicate where I can see the Dipole SN:DIPC31, SN:DSIPG34 validation reports and probe calibration report from SAR System Vendor ?
3. Please clarify if the permittivity, conductivity and the measured SAR value 9.04588 W/kg on page 11 of the (S5) 850BODY validation report and SAR value 38.4138W/kg on page 11 of the (S5) 1900BODY validation report are correct.
4. The target value including 1g SAR, Permittivity and Conductivity used for System Validation on page 17 of the SAR report are from IEEE 1528., but FCC has requested the target value used for system validation should be from the results of the validation dipole report provided by SAR System vendor. Please provide a revised SAR test report with the target value from calibration dipole report..
5. FCC logo can be only put on the label when this device has been tested under FCC Part 15B.

The items indicated above must be submitted before processing can continue on the above referenced application. Failure to provide the requested information may result in application termination. Correspondence should be considered part of the permanent submission and may be viewed from the Internet after a Grant of Equipment Authorization is issued.

Please do not respond to this correspondence using the email reply button. In order for your response to be processed expeditiously, you must submit your documents through the AmericanTCB.com website. Also, please note that partial responses increase processing time and should not be submitted.

Any questions about the content of this correspondence should be directed to the sender.
