Written by : O. ROY

July 28, 2008

Test report # : 027119-CC-1-b

The equipment CSP-Com Wifi (FCC ID: VPM-CSP-WF) uses a certified Wifi module FCC ID: R68WIPORTG

The Wifi module FCC ID: R68WIPORTG has been certified with a dedicated antenna.

In the new certification filing, the antenna has been changed by the new applicant and the function is limited by the new applicant to 802.11g mode through a specific configuration (see Exhibit 7 functional description).

In the Wifi module FCC ID: R68WIPORTG certification test report, most tests have been done on the antenna connector. The new application has no antenna connector. Results that depend on the antenna are spurious emission and RF power. That is why all tests that are not "antenna dependant" are not redone and tests provided in the test report of the Wifi module FCC ID: R68WIPORTG can be used as evidences of conformity to other FCC technical requirements (see the previous test report: WIPORT-XX-Final FCC-060321F - Rev. A1).

An attestation letter will be provided by Lantronix to declare that no modification has been made to the Wifi module since it was tested and certified in Year 2006, and the test data continues to demonstrate compliance for the wifi module.

Olivier ROY

Gyl Technologies Technical manager.
