FCC Statement of Wi-Fi Access Point mode and Ad Hoc mode
and
DFS client device channel plan and software operational declaration

---

Product: Tablet PC
Model No.: F-04H
FCC ID: VQK-F04H

Wi-Fi hotspot and Ad Hoc mode
The above device does not have function for Wi-Fi Access point mode and Ad Hoc mode on DFS frequency.
We show detail channels' behavior on tables of the next page.

Signature: 

We, **FUJITSU LIMITED**, declare that the device, FCC ID: **VQK-F04H** Model Name: **F-04H**, does not have “Ad Hoc on non-US frequencies” and/or “on DFS frequencies. Also, the client software and associated drivers will not initiate any transmission on DFS frequencies without initiation by a master. This includes restriction on transmissions for beacons and support for ad-hoc peer-to-peer modes.

Below is the channel / frequency plan for the device

CH	1	2	3	4	5	6	7	8	9	10	11
Frequency (MHz)	2412	2417	2422	2427	2432	2437	2442	2447	2452	2457	2462
Scan Type	Active										

Also, on DFS channels, the WLAN driver in the device operates under the control of an AP at all times, except when in ad-hoc mode, on US non-DFS channels. The device passively scans DFS frequencies until a master device is detected. The control of this functionality is not accessible to anyone under any conditions. Furthermore, the firmware is protected by special signature and CRC checksum. Signature and CRC checksum will be calculated and verified before firmware upgrade. Unauthorized modification to firmware will lead the failure of verification thus firmware upgrade is not allowed.
